1. Introduction

1.1 Overview

BiTrend™ Essentialis the industrial leading 2.4Ghz 802.11 b/g/n embedded Wi-Fi module which delivers unmatched performance and codeless development in a compact package, providing a quick, easy and cost effective way for developers and manufacturers to add Wi-Fi connectivity for home automation, lighting control, energy efficiency and other IOT applications.

BiTrend™ Essential family combines a 2.4Ghz 802.11 b/g/n radio transceiver with a 32-bit microprocessor and embedded with MAC, baseband processing and optimized Wi-Fi network stack. It is an ideal solution for developers and manufacturers with limited RF and embedded programming expertise as it significantly reduces RF design time and removes the burden of testing and certification.

Benefitted from BroadLink's turn-key solution, BiTrend™ Essential is an ideal solution for developers with limited Wi-Fi or RF expertise or for those seeking faster time to market. It reduces RF design time and removes the burden of testing and certification. BiTrend™ Essential is fully compliant with IEEE 802.11 b/g/n standard and certified with CE, FCC and RoHS.

BiTrend™ Essential is a highly integrated Wi-Fi SoC(system on Chip) single chip, which supportsIEEE802.11b/g/n single stream, providing GPIO for intelligent control, and UART interfaces for device communication.

BiTrend™ Essential has 8Mbits flash and integrates power amplifier, low noise amplifier, and RF switch to reduce the module size and RF design capability required. And also integrate power manage unit for single 3.3V power source for cost effective design.

BiTrend™ Essential embedded 32-bit RISC MCU for 802.11b/g/n drivers, supplicant, TCP/IP protocol stack, and networking applications, can be operated in station mode and softAP mode. The WT1SBS is an ideal solution for embedded device to enable networking service with minimized design effort.

1.2 Applications

- Smart home appliances
- Remote Control
- Medical/Health Care
- Network consumer devices

1.3 Key Features

a．Support IEEE802.11b/g/n

Frequency Range	2.412 GHz - 2.462 GHz
Wi-Fi Standard	IEEE 802.11 b/g/n
Transmitter Power	802.11b:17dBm 802.11g:20dBm 802.11n:18dBm
MIN Receiver Sensitivity	802.11b<-78dBm 802.11g<-68dBm 802.11n<-66dBm
Data rate	11M@802.11b, 54M@802.11g, MCS7@802.11n
Security	Encryption Standard：WEP/WEPA/WPA2 EncryptionAlgorithm：WEP64/WEP128/TKIP/AES
Wi-Fi Modes	STA/AP

b．Support UART passthrough
c．Support STA\AP
d．Patent SmartConfig™ technology
e．Support IPv4, TCP/UDP/ DNS/DHCP
f．PCB printed antenna

Antenna type	PCB printed ANT

g．Power source: 3.3V

h. Peripherals:
    1*UART
    5*GPIO
    1*RESET
i. Dimension 26mm*17.7mm*4mm
j. ESD: 2KV
k. Absolute maximum ratings

Symbol	Description	Min.	Max.	Units
Ts	Storage temperature	-40	125	℃
TAMBIENT	Ambient Temperature	-10	70	℃
Vdd	Supply voltage	0	3.63	V
Vio	Voltage on IO pin	-0.28	3.63	V
VESD	HBM(human body model)		2000	V

3. Electrical Characteristics

3.1 Absolute Maximum Ratings – Voltage & Current

Using products above the absolute maximum ratings may cause permanent damage to the device. These are maximum ratings only and functional operation of the device at these conditions is not implied. Exposure to maximum rating conditions for extended

periods may a ect the reliability of the device.

Symbol	Rating	MIN	TYP	MAX	Unit
VDD33	3.3V Supply Voltage	2.97	3.3	3.63	V

Symbol	Ratings	Max	Unit
I_{VDD}	Total current into VDD power lines (source)	90	
I_{VSS}	Total current out of VSS ground lines (sink)	90	mA
I_{IO}	Output current sunk by any I/O and control pin	10	
	Output current source by any I/Os and control pin	10	

3.2Current consumption

Symbol	Condition	Performance	
		TYP	Unit
I_{RF}	IDLE mode	85	mA
I_{RF}	RX Active, HT40, MCS7	150	mA
I_{RF}	TX HT40, MCS7 @ 15dBm（pulse）	200	mA
I_{RF}	TX CCK 11Mbps @ 18dBm（pulse）	240	mA

Note: All result is measured at the antenna port and VDD33 is 3.3V

3.3 Absolute maximum ratings – Temperature

Symbol	Ra	Max	Unit
T$_{STG}$	Storagetemperature	–40 to+125	℃
T$_A$	Workingtemperature	-10 to+70	℃
Humidit	Non condensing, relative humidity	90%（RH）	

3.4Absolute maximum ratings – ESD

Symbol	Ratings	Conditions	Class	Max	Unit
V$_{ESD}$(HBM)	Electrostatic discharge voltage (human body model)	TA = +25 °C conforming to JESD22-A114	2	2000	V

7. Reference Design
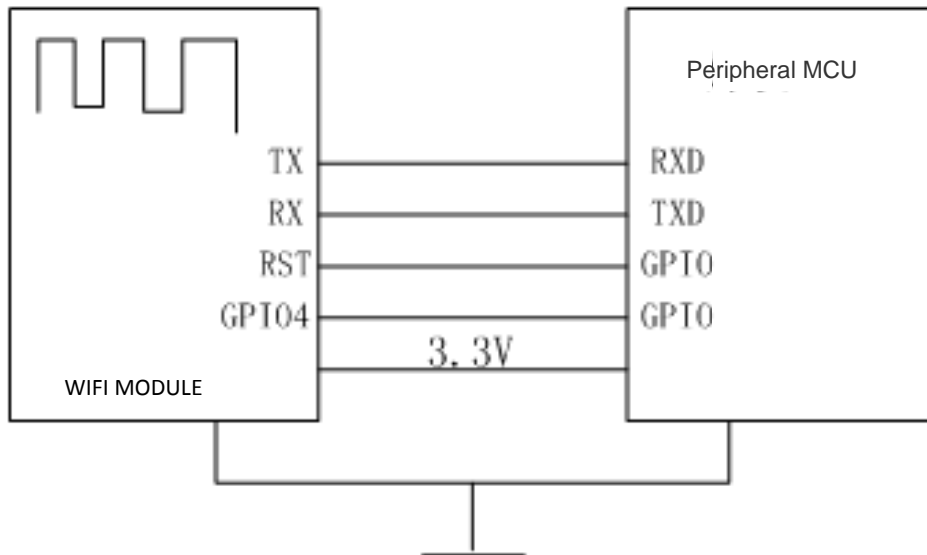

In addition to the standard serial port，the peripheral MCU also need to provide two GPIO pins to connect with the GPIO4 pin and the RST pin of the WIFI module respectively,when the WIFI module works properly,the GPIO4 pin will keep outputting message of dog feeding,if the peripheral MCU did not receive the message,the module will reset and restart through pulling down the RST pin by the other GPIO pin.

If the peripheral MCU uses power source of 5V,it needs to add a level switching circuit in the connection of the serial port and the related circuit.

The module needs a large current about 250mA when transmitting data,please ensure that the power source can provide sufficient current.

8. AntennaCharacteristics

8.1 Antenna Selection

The WT1SBS supports on-board PCB printed antenna.When the Operating Frequencyis between 2.4G~2.5GH, S11 of antenna port is less than-10dB and peak gainis about 1.1dBi.

Figure 7. Antenna radiation pattern simulation

Figure 8. Antenna port S11simulation curve

In practical use, WT1SBS is welded on user's boardand value of S11 has some changes.

8.2 Minimizing Radio Interference

When integrating the Wi-Fi module with on board PCB printed antenna, make sure the three points below:

1. The area under the antenna end of the module should be keep clear of metallic components, connectors, vias, traces and other materials that can interfere with the radio signal.

2. The area around the antenna end the module protrudes at least 10mm from the mother board PCB and any metal enclosure.
3. When planning PCB layout, it is recommended that user places the antenna of Wi-Fi module as close as possible to the edge of boarder to ensure the good performance of antenna, which is shown in the picture below.

FCC WARNINGS：

Any Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may n ot cause harmful interference, and (2) this device must accept any interfere nce received, including interference that may cause undesired operation.

FCC Radiation Exposure Statement:

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator& your body. This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter. Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

—Reorient or relocate the receiving antenna.

—Increase the separation between the equipment and receiver.

—Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

—Consult the dealer or an experienced radio/TV technician for help.

In accordance with FCC Part 15C, this module is listed as a Single Modular Transmitter device.Therefore, the final host product must be submitted to [HangZhou Gubei Electronics Technology Co., Ltd.] for confirmation that the installation of the module into the host is in compliance with the regulations of FCC .Specifically, if an antenna other than the model documented in the Filing is used, a Class 2 Permissive Change must be filed with the FCC.

FCC Label Instructions
The outside of final products that contains this module device must display a label referring to the enclosed module. This exterior label can use wording such as the following: "Contains Transmitter Module FCC ID: 2ACDZ-WT1" or "Contains FCC ID: 2ACDZ-WT1" Any similar wording that expresses the same meaning may be used.

To satisfy FCC RF Exposure requirements for mobile and base station transmission devices, a separation distance of 20 cm or more should be maintained between the antenna of this device and persons during operation. To ensure compliance, operation at closer than this distance is not recommended. The antenna(s) used for this transmitter must not be co-located

or operating in conjunction with any other antenna or transmitter.
