FCC Test Report

FOR:

ResMed Ltd.

Model Number: 37030

Product Description: Continuous Positive Airway Pressure (CPAP) Device

FCC ID: 2ACHL-AIR103G
IC ID: 9103A-AIR103G

47 CFR Part 2, 22, 24, 27
RSS-GEN Issue 4, RSS-132 Issue 3, RSS-133 Issue 6, RSS-139 Issue 2

TEST REPORT #: EMC_CONNE-038-15001_FCC 22_24_27_WWAN
DATE: 2015-05-06

FCC:
A2LA Accredited

IC recognized #
3462E-1

1 Assessment

The following device was evaluated against the applicable criteria specified in FCC rules parts 2, 22, 24 and 27 of Title 47 of the Code of Federal Regulations and in Industry Canada Standards RSS-Gen, RSS-132, RSS-133, RSS-139.
No deviations were ascertained during the course of the tests performed.

Company	Description	Model #
ResMed Ltd.	Continuous Positive Airway Pressure (CPAP) Device	37030

Responsible for Testing Laboratory:

Date	Section	Name	Signature
2015-05-06	Compliance	Milton Ponce de Leon (Test Lab Manager)	Milton Ponce de Leon Digitally signed by Milton Ponce de Leon DN: cn=Milton Ponce de Leon, c=US, o=Cetecom Inc., ou=OTA, email=milton.deleon@cetecom.com Date: 2015.05.06 16:51:10 -07'00'

Responsible for the Report:

Date	Section	Name	Signature
2015-05-06	Compliance	Ahmed Libab (EMC Technician)	Ahmed Libab Digitally signed by Ahmed Libab DN: cn=Ahmed Libab, c=US, o=Cetecom, ou=OTA, email=alibab@cetecom.com Date: 2015.05.06 16:15:30 -07'00'

The test results of this test report relate exclusively to the test item specified in Section3.
CETECOM Inc. USA does not assume responsibility for any conclusions and generalizations drawn from the test results with regard to other specimens or samples of the type of the equipment represented by the test item. The test report may only be reproduced or published in full. Reproduction or publication of extracts from the report requires the prior written approval of CETECOM Inc. USA.

2 Administrative Data

2.1 Identification of the Testing Laboratory Issuing the Test Report

Company Name:	CETECOM Inc.
Department:	Compliance
Address:	6370 Nancy Ridge Drive, Suite 101 San Diego, CA 92121 U.S.A.
Telephone:	+1 (858) 362 2400
Fax:	+1 (858) 587 4809
Test Lab Manager:	Milton Ponce de Leon
Responsible Project Leader	Laith Saman

2.2 Identification of the Client

Applicant's Name:	ResMed Ltd.
Street Address:	1 Elizabeth Macarthur Drive
City/Zip Code	Bella Vista, NSW, 2153
Country	Australia
Contact Person:	Gerry O'Connor
Phone No.	+612 8884 2165
Fax:	+612 8884 2007
e-mail:	

2.3 Identification of the Manufacturer

Manufacturer's Name:	Same as client.
Manufacturers Address:	
City/Zip Code	
Country	

3 Equipment under Test (EUT)

3.1 Specification of the Equipment under Test

Model Number:	37018, 37022, 37030, 37035, 37044, 37048, 37055, 37073
Marketing Name[1]:	AirSense 10: 37018, 37022, 37030, 37035 AirCurve 10: 37044, 37048, 37055, 37073
FCC-ID/ IC-ID :	2ACHL-AIR103G / 9103A-AIR103G
Product Description:	Continous Positive Airway Pressure (CPAP) Device
Technology / Type(s) of Modulation:	see the following spec of incorporated cellular module:
Integrated Module Info:	Telit HE910-D FCC ID: RI7HE910 / IC ID: 5131A-HE910 • GSM 850/900/1800/1900 Mhz ; • UMTS FDD: Band I/II/IV/V/VIII ; UL 5.76 Mbps/DL 21.0Mbps data rates
Operating Frequency Ranges (MHz) / Channels:	GSM Frequency Bands: 850/900/1800/1900 MHz UMTS FDD Frequency Bands: Band I/II/IV/V/VIII
Antenna info:	SMD Antenna: Taoglas PA.25 824MHZ = 1.49dBi, 1710MHZ=2.53dBi, 1850MHz=2.38dBi
Rated Operating Voltage Range:	Vmin: 23 VDC/ Vnom: 24 VDC/ Vmax: 25 VDC
Rated Operating Temperature Range:	Tmin: +5°C/ Tmax: +35°C
Other Radios included in the device:	NA

NOTE:
1. See section 3.5 for a description of the differences of models.

3.2 Identification of the Equipment under Test (EUT)

EUT #	Serial Number	Model	SAMPLE	HW Version	SW Version
1	SN 22151100891	37030	RADIATED	BOM 37030 Rev 1.0	SX558-0310
2	SN 22151100885	37030	CONDUCTED	BOM 37030 Rev 1.0	SX558-0310

3.3 Identification of Accessory equipment

AE #	Type	Manufacturer	Model	Serial Number
1	90W AC adapter	ResMed	370001	DG45714N23008600200

3.4 Environmental conditions during Test:

The following environmental conditions were maintained during the course of testing:
Ambient Temperature: 20-25°C
Relative humidity: 40-60%

3.5 Dates of Testing:

03/16/2015 – 03/20/2015

3.6 Miscellaneous EUT information:

Only model 37030 was tested for EMC evaluation.
Based on a related model equality/similarity declaration provided by ResMed and which will be part of the FCC and IC filing exhibits, it is assumed that the results obtained from testing of the mentioned EUT remains valid for all model variants listed in section 3.1 above.

4 Subject of Investigation

The objective of the measurements applied by CETECOM Inc. was to establish compliance of the EUT as described under Ch. 3 of this Test Report, with the applicable criteria specified in

- 47 CFR Part 2: Title 47 of the Code of Federal Regulations: Chapter I-Federal Communications Commission Frequency allocations and radio treaty matters; general rules and regulations.
- 47 CFR Part 22: Title 47 of the Code of Federal Regulations: Chapter I-Federal Communications Commission subchapter B- common carrier services; Part 22- Public mobile services
- 47 CFR Part 24: Title 47 of the Code of Federal Regulations: Chapter I-Federal Communications Commission subchapter B- common carrier services; Part 24- Personal communication services
- 47 CFR Part 27: Title 47 of the Code of Federal Regulations: Chapter I-Federal Communications Commission subchapter B- common carrier services; Part 27- Miscellaneous wireless communication services
- RSS-GEN- Issue 4: General Requirements and Information for the Certification of Radio Apparatus
- RSS-132- Issue 3: Spectrum management and telecommunication policy- Radio Standards Specifications Cellular telephones employing new technologies operating in the bands 824-849MHz and 869-894MHz
- RSS-133- Issue 6: Spectrum management and telecommunication policy- Radio Standards Specifications- 2GHz personal communication services
- RSS-139- Issue 2: Spectrum management and telecommunication policy- Radio Standards Specifications- Advance wireless services equipment operating in the bands 1710-1755MHz and 2110-2155MHz

This test report is to support a request for new equipment authorization under the FCC ID: **2ACHL-AIR103G** and IC ID: **9103A-AIR103G**
All testing was performed on the product referred to in Section 3 as EUT.

This product integrates the precertified WWAN module : Telit HE910-D.

Per guidelines from KDB 996369, conducted signal test results from module certification is re-used for this certification as the output power has been verified to be within the specified production tolerances and measurement uncertainties.

The module test data can be obtained under the FCC Filing ID: **2ACHL-AIR103G** and IC ID: **9103A-AIR103G**

6 Measurements

6.1 RF Power Output

6.1.1 References

FCC: CFR Part 2.1046, CFR Part 22.913, CFR Part 24.232, CFR Part 27.50
IC: RSS-Gen Section 6.12; RSS-132 Section 5.4; RSS-133 Section 6.4, RSS-139 Section 6.4

6.1.2 Measurement requirements:

6.1.2.1 FCC 2.1046: RF power output.

Power output shall be measured at the RF output terminals when the transmitter is adjusted in accordance with the tune-up procedure to give the values of current and voltage on circuit elements as specified. The electrical characteristics of the radio frequency load attached to the output terminals when this test is made shall be stated. RSS-Gen 6.12: RF power output.

2015.04.2.2 **RSS-Gen 6.12: RF power output**
Transmitter output power measurements shall be carried out before the unwanted emissions test. The transmitter output power value, obtained from this test, serves as the reference level used to determine the unwanted emissions.

6.1.3 Limits:

ERP/EIRP (850 MHz Band)

FCC Part 22.913 (a) & RSS-132 Section 5.4

FCC: Peak ERP < 38.45 dBm (7W)
The effective radiated power (ERP) of mobile transmitters must not exceed 7 Watts.

IC: Average EIRP < 40.60 dBm (11.5W)
The transmitter output power shall be measured in terms of average power. The equivalent isotropically radiated power (e.i.r.p.) for mobile equipment shall not exceed 11.5 watts.

EIRP (1900 MHz Band)

FCC Part 24.232 I I & RSS-133 Section 6.4/SRSP-510 Section 5.1.2

FCC: Peak EIRP < 33 dBm (2W)
(b) Mobile/portable stations are limited to 2 Watts effective isotropic radiated power (EIRP).
I Peak transmit power must be measured over any interval of continuous transmission using instrumentation calibrated in terms of an rms equivalent voltage. The measurement results shall be properly adjusted for any limitations, such as detector response times, limited resolution bandwidth capability when compared to the emission bandwidth, sensitivity, etc., so as to obtain a true peak measurement over the full bandwidth of the channel.

IC: Average EIRP < 33 dBm (2W)
The transmitter output power shall be measured in terms of average power. The equivalent isotropically radiated power (e.i.r.p.) for mobile equipment shall not exceed 2 watts.

EIRP (1700 MHz Band)

FCC Part 27.50 (d) (4) (6) & RSS-139 Section 6.4

FCC: Peak EIRP < 30 dBm (1W)

Fixed, mobile and portable (handheld stations) operating in the 1710-1755 MHz band are limited to 1 watt EIRP

Peak transmit power must be measured over any interval of continuous transmission using instrumentation calibrated in terms of an rms-equivalent voltage. The measurement results shall be properly adjusted for any instrument limitations, such as detector response times, limited resolution bandwidth capability when compared to the emission bandwidth, sensitivity, *etc.*, so as to obtain a true peak measurement for the emission in question over the full bandwidth of the channel

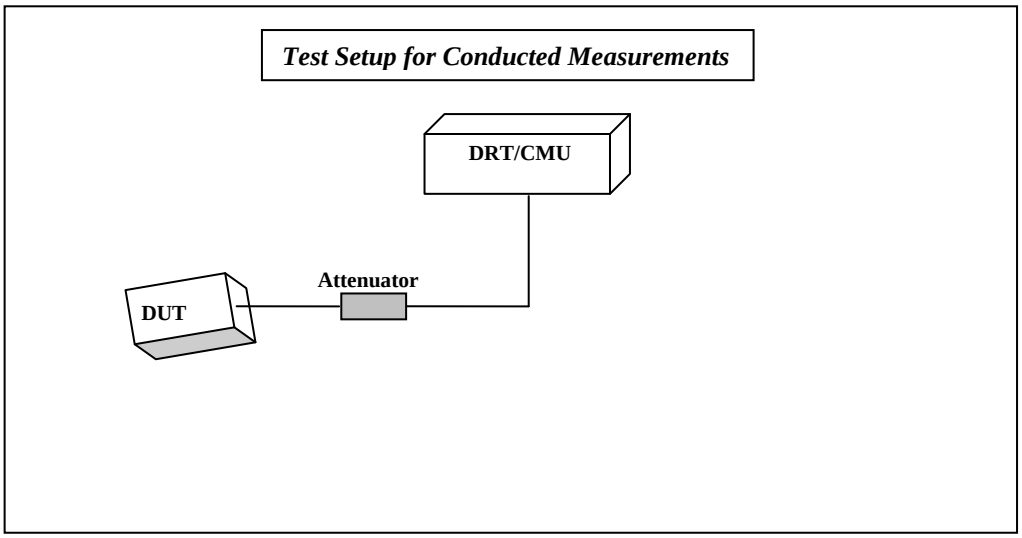
IC: Average EIRP < 30 dBm (1W)

The average equivalent isotropically radiated power (e.i.r.p.) for fixed, mobile and portable transmitters in the 1710-1755 MHz shall not exceed 1 watt.

6.1.4 Conducted Output Power Measurement

6.1.4.1 Measurement Procedure:

Measurement according to KDB 971168 D01v02r02 (Measurement guidance for certification of Licensed Digital Transmitters)
Section 5.1.1 for peak power
Section 5.2.2 for average power



1. Connect the equipment as shown in the above diagram. A Digital Radio Communication Tester (DRT: R&S CMU200 here) is used to enable the EUT to transmit and to measure the output power.
2. Adjust the settings of the CMU200 to set the EUT to its maximum power at the required channel.
3. Record the Peak and Average Output power level measured by the CMU200.
4. Correct the measured level for all losses in the RF path.
5. Measurements are to be performed with the EUT set to the low, middle and high channel of each frequency band and for all types of modulation schemes.
6. GMSK mode measurements are performed in GSM 1 uplink slot configuration
7. UMTS mode measurements are performed in RMC 12.2K configuration

6.1.4.2 Measurement Uncertainty

+/- 0.5 dB

6.1.4.3 Test Conditions:

Tnom: 20°C; Vnom: 24 V

6.1.5 Conducted Power Measurements and calculated ERP/EIRP:

ERP/EIRP 850 MHz band

All measurements and calculate results remain within the limits.

6.1.5.1.1 Test Verdict

Pass.

6.2 Spurious Emissions Radiated

6.2.1 References

FCC: CFR Part 2.1053, CFR Part 22.917, CFR Part 24.238, CFR Part 27.53
IC: RSS-Gen Section 6.13; RSS-132 Section 5.5; RSS-133 Section 6.5, RSS-139 Section 6.5

6.2.2 Measurement requirements:

FCC 2.1053: Field strength of spurious radiation.

Measurements shall be made to detect spurious emissions that may be radiated directly from the cabinet, control circuits, power leads or intermediate circuit elements under normal conditions of installation and operation. Curves or equivalent data shall be supplied showing the magnitude of each harmonic and other spurious emission.

RSS-Gen 6.13: Transmitter unwanted spurious emissions

The same parameter, peak power or average power, used for the transmitter output power measurement shall be used for unwanted emission measurements.
The search for unwanted emissions shall be from the lowest frequency internally generated or used in the device (local oscillator, intermediate or carrier frequency), or from 30 MHz, whichever is the lower, to the 10^{th} harmonic of the highest frequency generated without exceeding 40 GHz.

6.2.3 Limits:

(2015) *Out of band emissions*. The power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least 43 + 10 log(P) dB.

For all power levels +30dBm to 0dBm, this becomes a constant specification of -13dBm.

FCC 22.917 Emission limitations for cellular equipment.

The rules in this section govern the spectral characteristics of emissions in the Cellular Radiotelephone Service.
(b) *Measurement procedure.* Compliance with these provisions is based on the use of measurement instrumentation employing a resolution bandwidth of 100 kHz or greater. In the 1 MHz bands immediately outside and adjacent to the frequency block a resolution bandwidth of at least one percent of the emission bandwidth of the fundamental emission of the transmitter may be employed. A narrower resolution bandwidth is permitted in all cases to improve measurement accuracy provided the measured power is integrated over the full required measurement bandwidth (*i.e.* 100 kHz of 1 percent of emission bandwidth, as specified). The emission bandwidth is defined as the width of the signal between two points, one below the carrier center frequency and one above the carrier center frequency, outside of which all emissions are attenuated at least 26 dB below the transmitter power.

FCC 24.238 Emission limitations for Broadband PCS equipment.

The rules in this section govern the spectral characteristics of emissions in the Broadband Personal Communications Service.
(b) Measurement procedure. Compliance with these provisions is based on the use of measurement instrumentation employing a resolution bandwidth of 1 MHz or greater. However, in the 1 MHz bands immediately outside and adjacent to the frequency block a resolution

bandwidth of at least one percent of the emission bandwidth of the fundamental emission of the transmitter may be employed. A narrower resolution bandwidth is permitted in all cases to improve measurement accuracy provided the measured power is integrated over the full required measurement bandwidth (*i.e.* 100 kHz of 1 percent of emission bandwidth, as specified). The emission bandwidth is defined as the width of the signal between two points, one below the carrier center frequency and one above the carrier center frequency, outside of which all emissions are attenuated at least 26 dB below the transmitter power.

RSS-132 Section 5.5.1.1 and RSS-133 Section 6.5.1

In the first 1.0 MHz band immediately outside and adjacent to the licensee's frequency block, the power of emissions per any 1% of the emission bandwidth shall be attenuated below the transmitter output power P (in watts) by at least $43 + 10 \log_{10}(P)$, dB. After the first 1.0 MHz, the power of emissions shall be attenuated below the transmitter output power by at least $43 + 10 \log_{10}(P)$, dB, in any 100 kHz bandwidth.
After the first 1.5 MHz, the power of emissions shall be attenuated below the transmitter output power by at least $43 + 10 \log_{10}(P)$, dB, in any MHz of bandwidth.

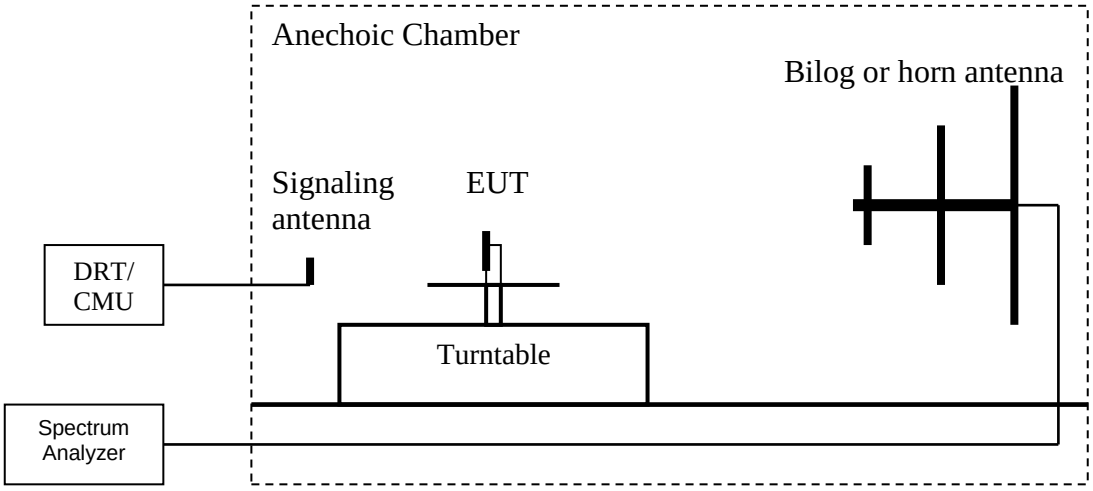
RSS-139 Section 6.5

In the first 1.0 MHz bands immediately outside and adjacent to the equipment's operating frequency block, the emission power per any 1% of the emission bandwidth shall be attenuated below the transmitter output power P (in watts) by at least $43 + 10 \log_{10}(P)$, dB.

After the first 1.0 MHz outside the equipment's operating frequency block, the emission power in any 1 MHz bandwidth shall be attenuated below the transmitter output power P (in watts) by at least $43 + 10 \log_{10}(P)$, dB.

6.2.4 Radiated out of band measurement procedure:

Ref: TIA-603C 2004- 2.2.12 Unwanted emissions: Radiated Spurious



1. Connect the equipment as shown in the above diagram with the EUT's antenna in a horizontal orientation.
2. Adjust the settings of the Digital Radio Communication Tester (DRT) to set the EUT to its maximum power at the required channel.
3. Set the spectrum analyzer to measure peak hold with the required settings.
4. Place the measurement antenna in a horizontal orientation. Rotate the EUT 360°. Raise the measurement antenna up to 4 meters in 0.5 meters increments and rotate the EUT 360° at each height to maximize all emissions. Measure and record all spurious emissions (**LVL**) up to the tenth harmonic of the carrier frequency.

6.2.5 Sample Calculations for Radiated Measurements

6.2.5.1 Power Measurements using Substitution Procedure:

The measurement on the Spectrum Analyzer is used as a basis for the Substitution procedure.
The EUT is replaced with a Signal Generator and an antenna. The setting on the Signal Generator is varied until the Spectrum Analyzer displays the original reading. EIRP is calculated as-

EIRP (dBm)= Signal Generator setting (dBm)- Cable Loss (dB)+ Antenna Gain (dBi)

Example:

Frequency (MHz)	Measured SA (dBµV)	Signal Generator setting (dBm)	Antenna Gain (dBi)	Dipole Gain (dBd)	Cable Loss (dB)	EIRP (dBm)
1000	95.5	24.5	6.5	0	3.5	27.5

6.2.6 Measurement Survey:

The site is constructed in accordance with ANSI C63.4 requirements and is recognized by the FCC to be in compliance for a 3m site. The spectrum is scanned from 30MHz to the 10th harmonic of the highest frequency generated by the EUT.
Radiated emissions measurements were made only at the upper, middle, and lower carrier frequencies of the 850 MHz, 1700 MHz and 1900 MHz bands of operation.
It was decided that measurements at these three carrier frequencies would be sufficient to demonstrate compliance with emissions limits because it was seen that all the significant spurs occur well outside the band and no radiation was seen from a carrier in one block of the GSM-850 MHz and the PCS-1900 MHz band into any of the other blocks respectively. The equipment must still, however, meet emissions requirements with the carrier at all frequencies over which it is capable of operating and it is the manufacturer's responsibility to verify this.

Radiated emission measurements were made in GMSK (1 uplink slot) and UMTS RMC 12.2k modes.

For radiated measurements, all data in this report shows the worst case emissions data between H/V antenna polarizations and for all 3 orthogonal orientations of the EUT.

Unless mentioned otherwise, the emission signals above the limit line in the plots are from the carrier

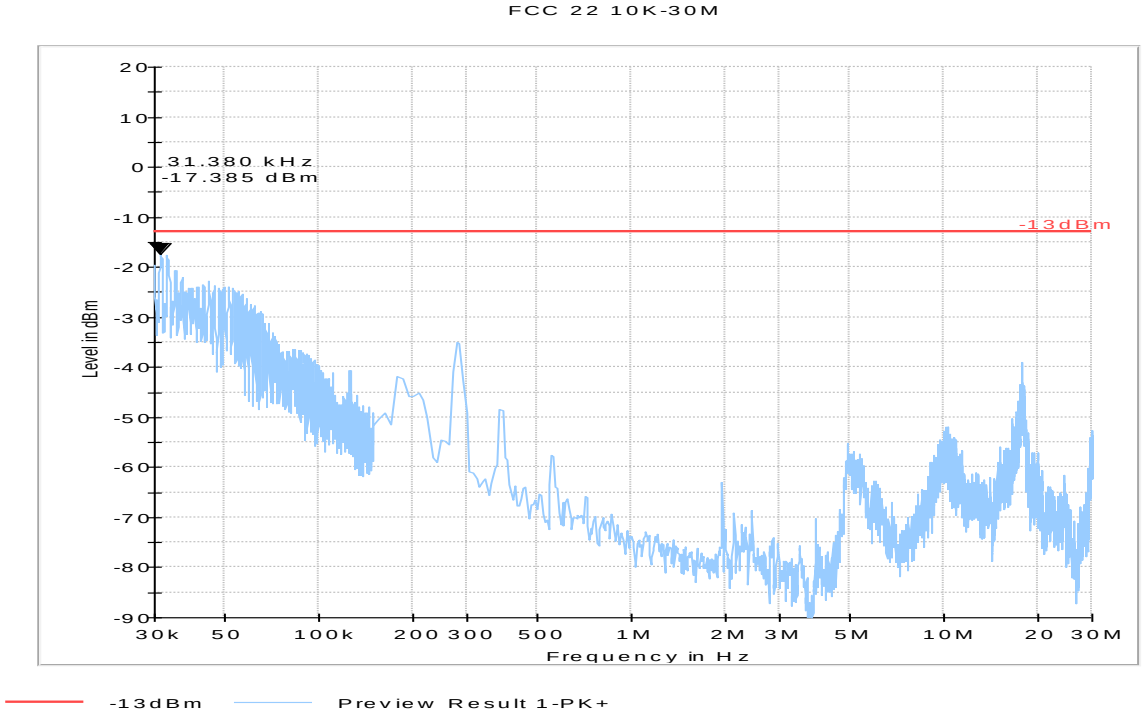
6.2.7 Test Conditions:

Tnom: 20^{o}C; Vnom: 24 V

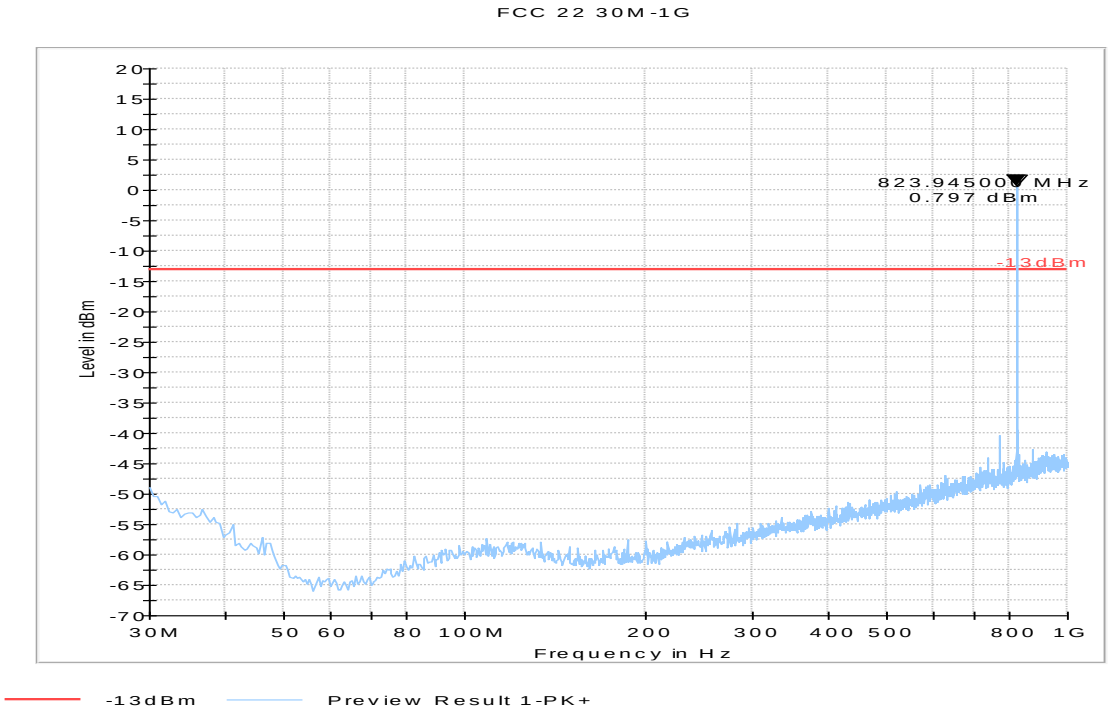
6.2.8 Test Results:

Radiated Spurious Emissions (GSM-850) Tx: Mid Channel

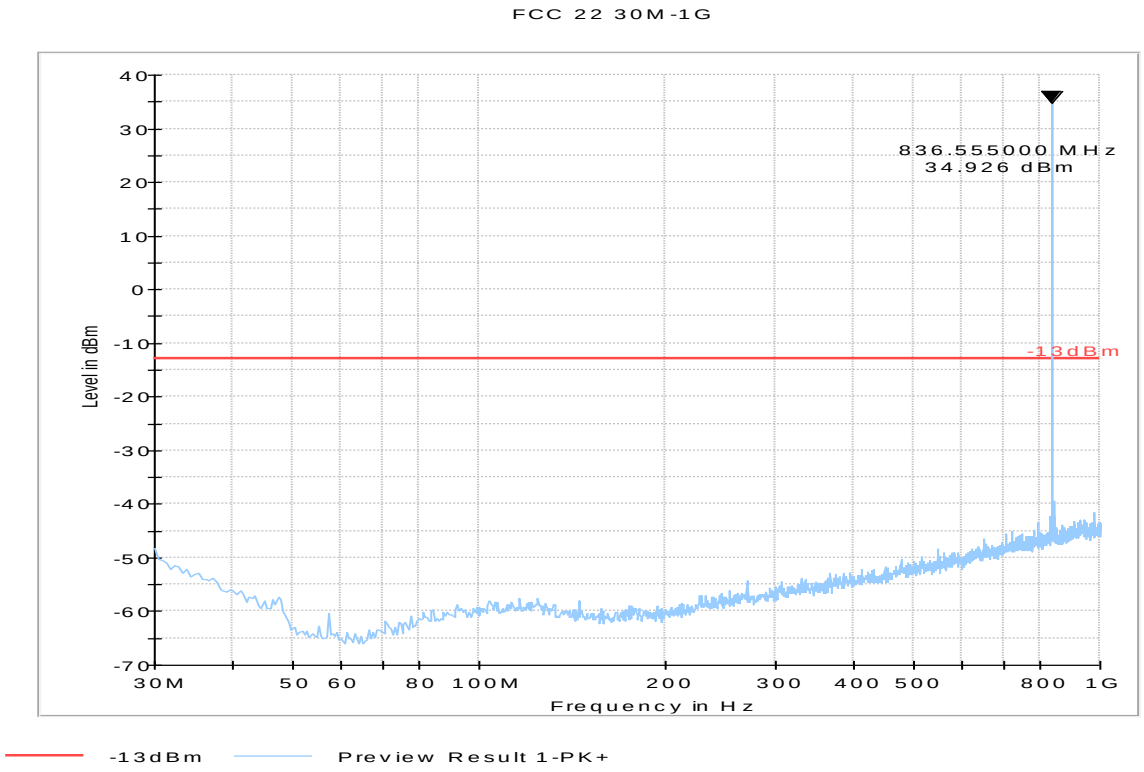
Test results: 10 kHz- 30 MHz – Mid Channel (GSM850)



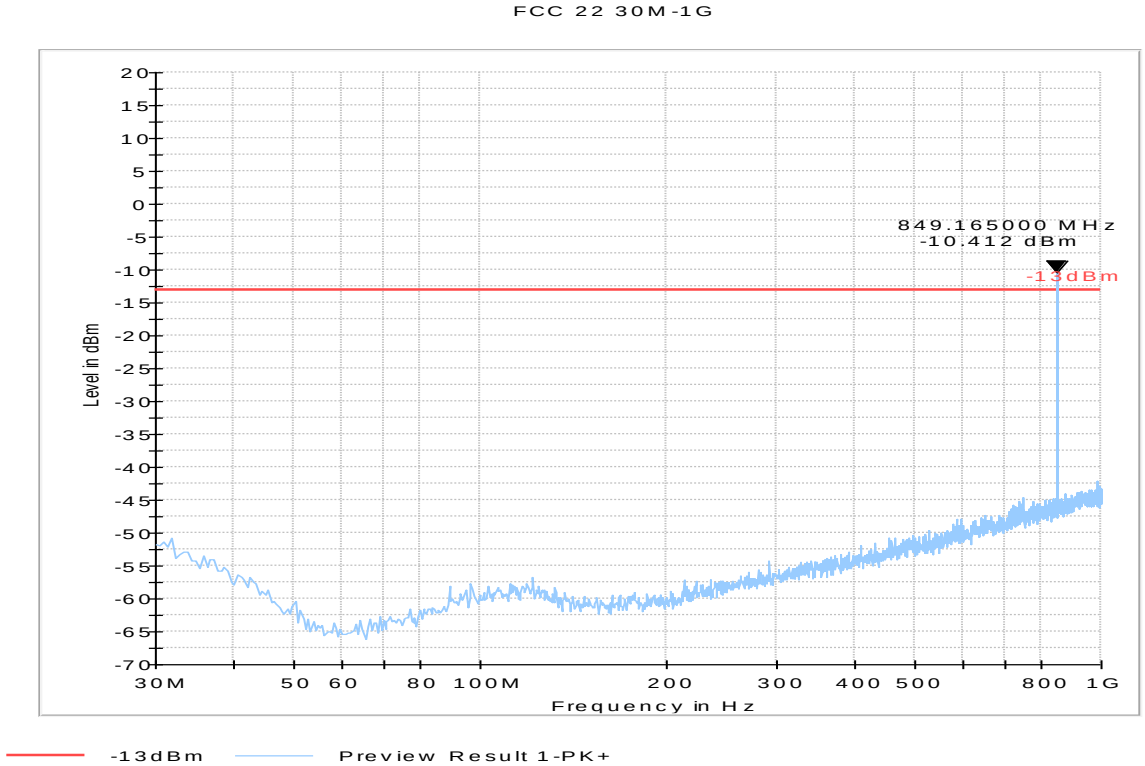
Test results – 30 MHz – 1GHz –Low Channel (GSM850)



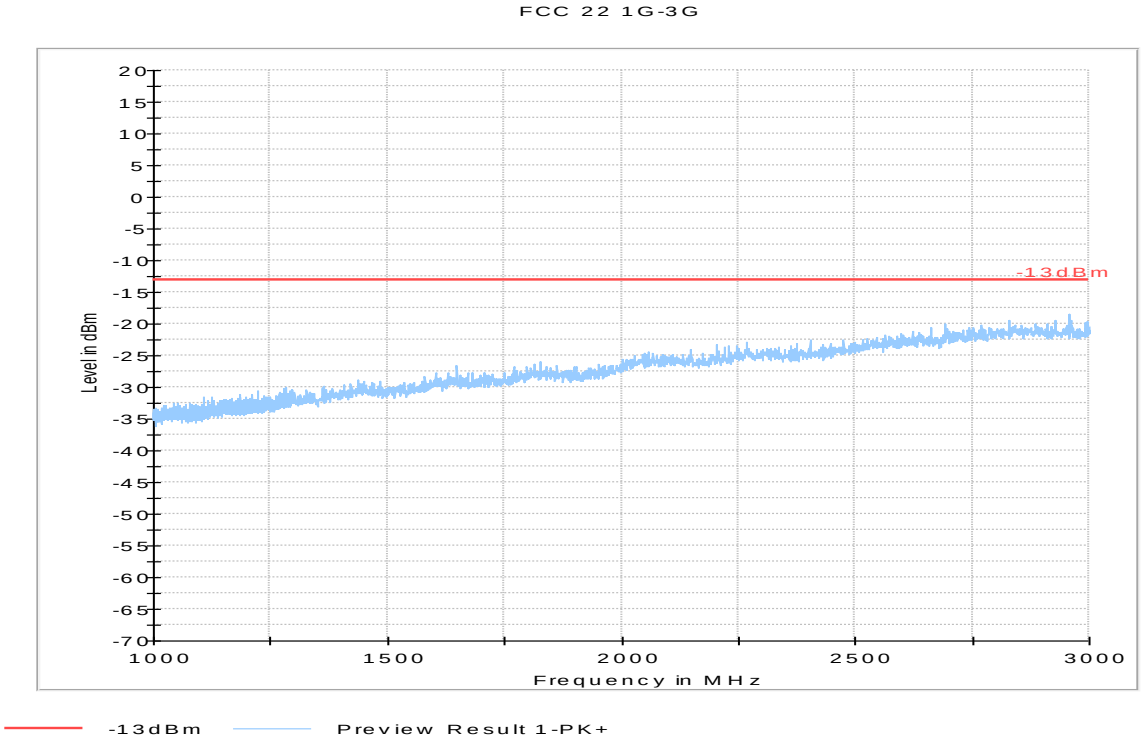
Test results – 30 MHz – 1GHz –Mid Channel (GSM850)



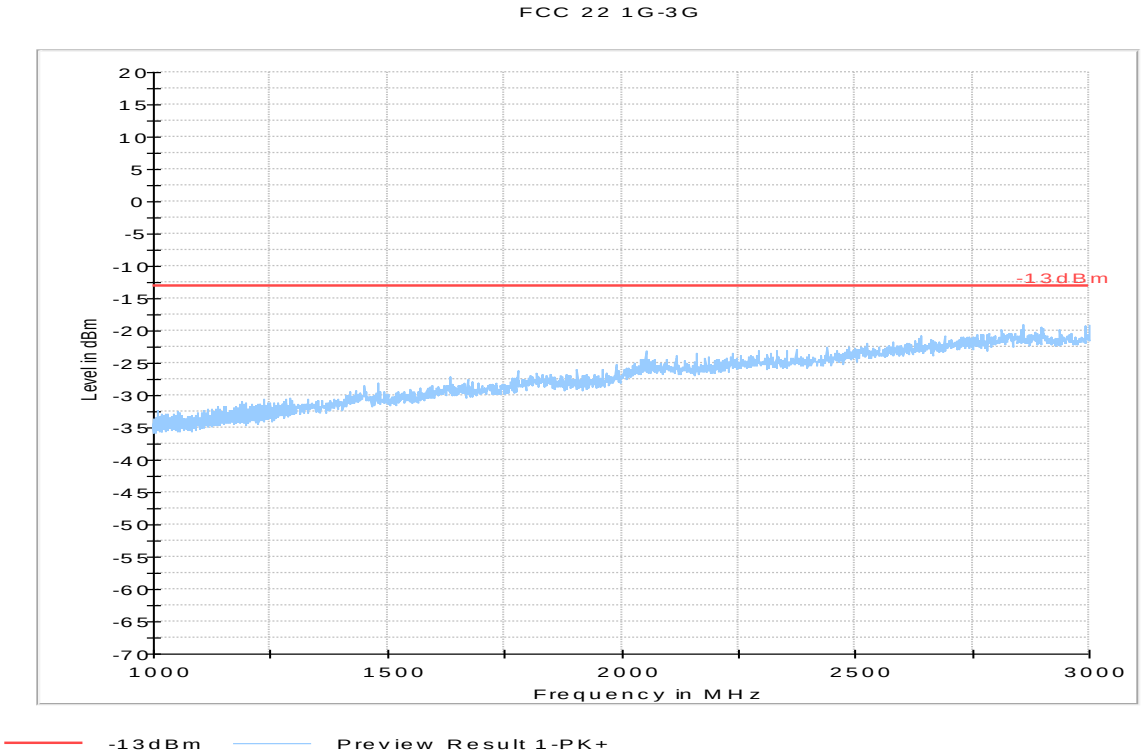
Test results – 30 MHz – 1GHz –High Channel (GSM850)



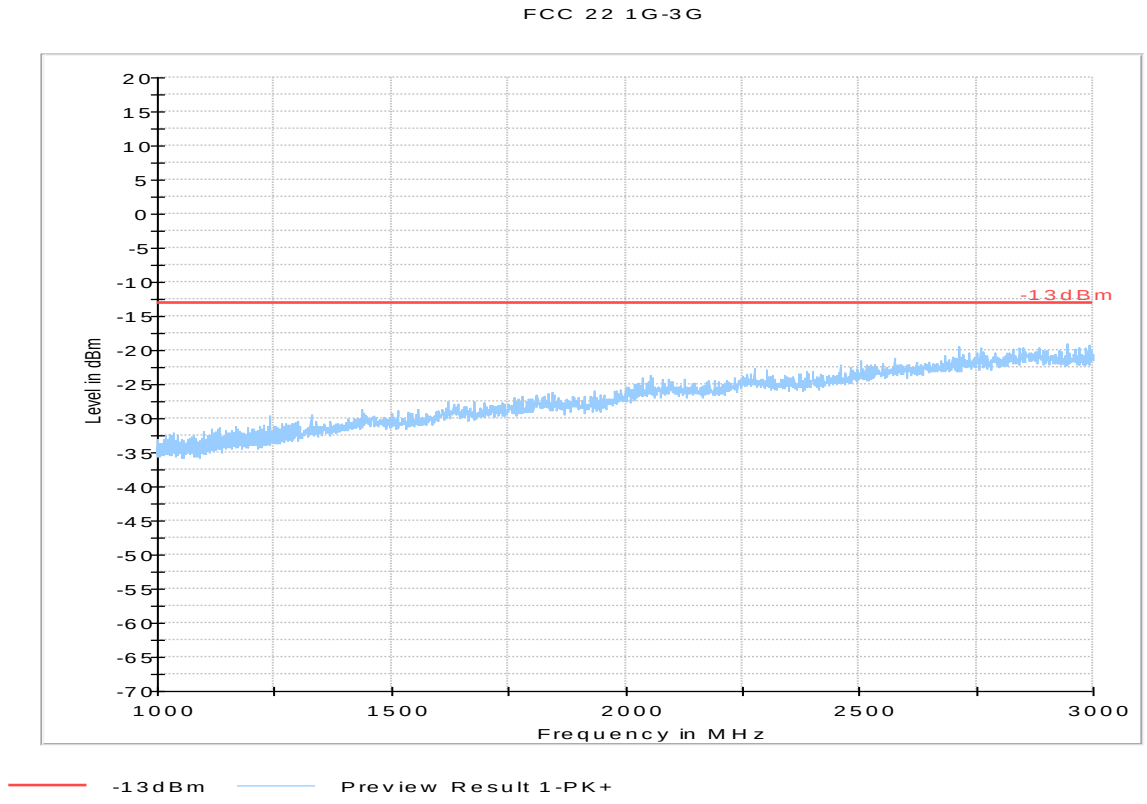
Test results – 1GHz – 3GHz –Low Channel (GSM850)



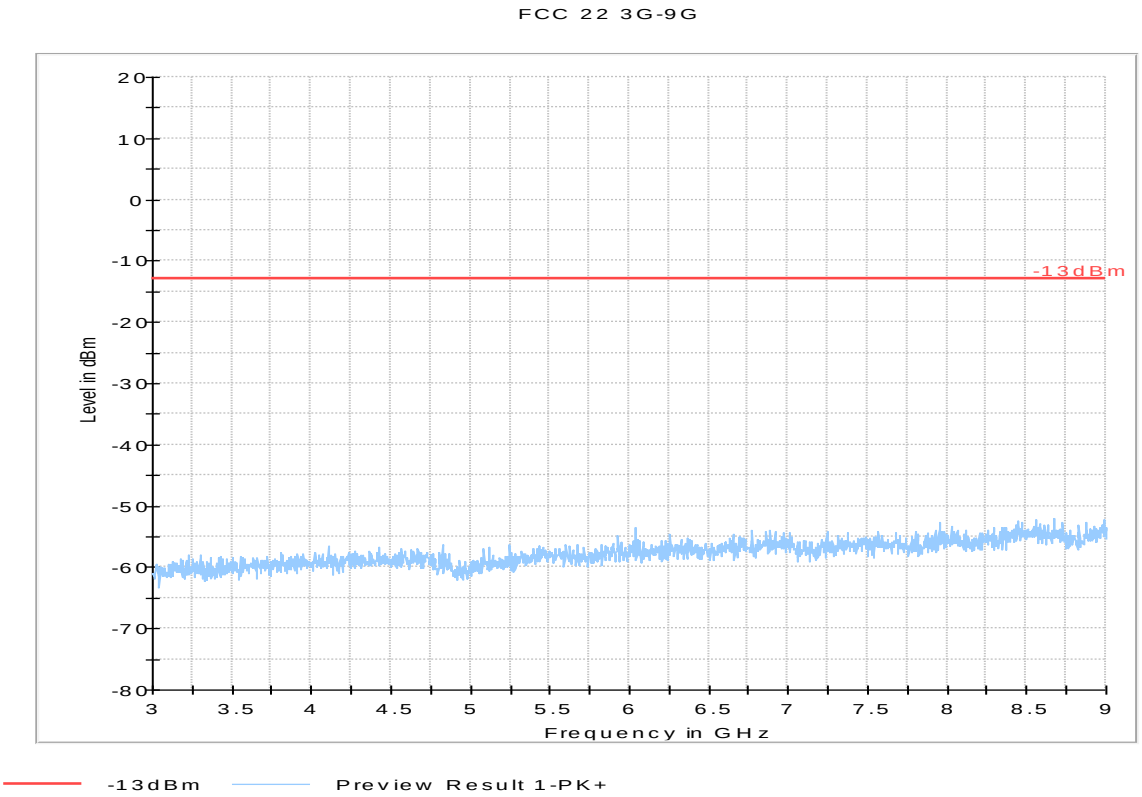
Test results – 1GHz – 3GHz –Mid Channel (GSM850)



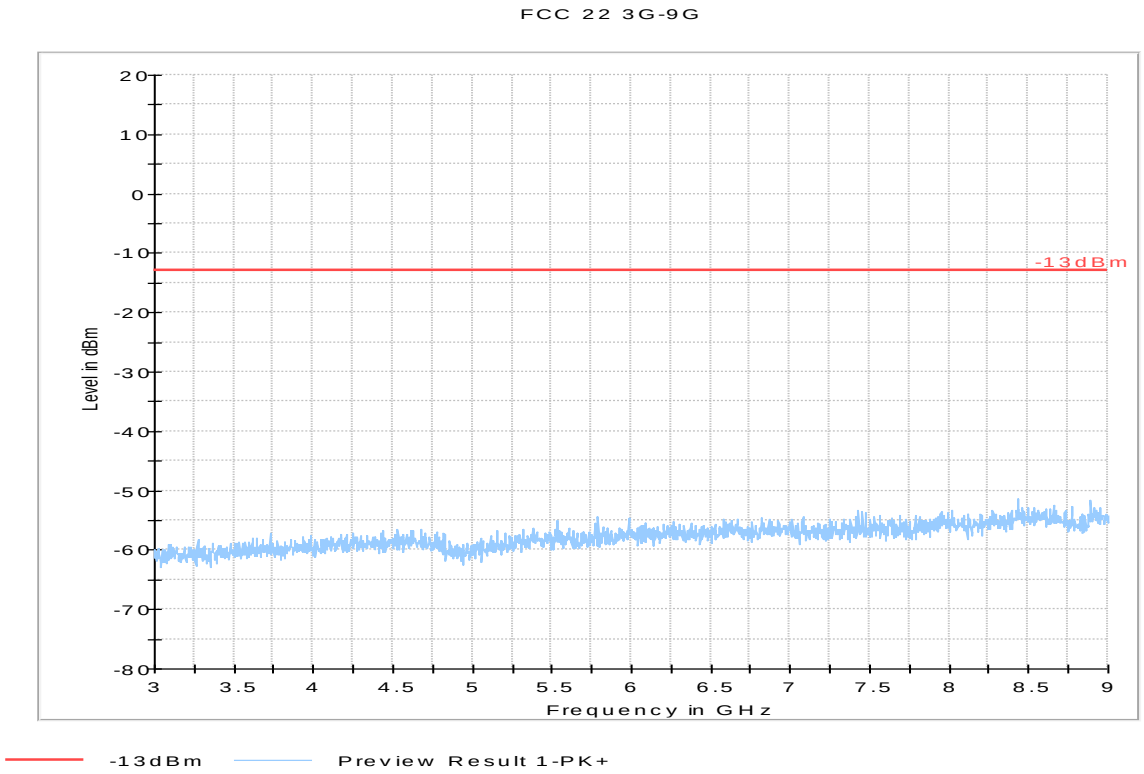
Test results – 1GHz – 3GHz –High Channel (GSM850)



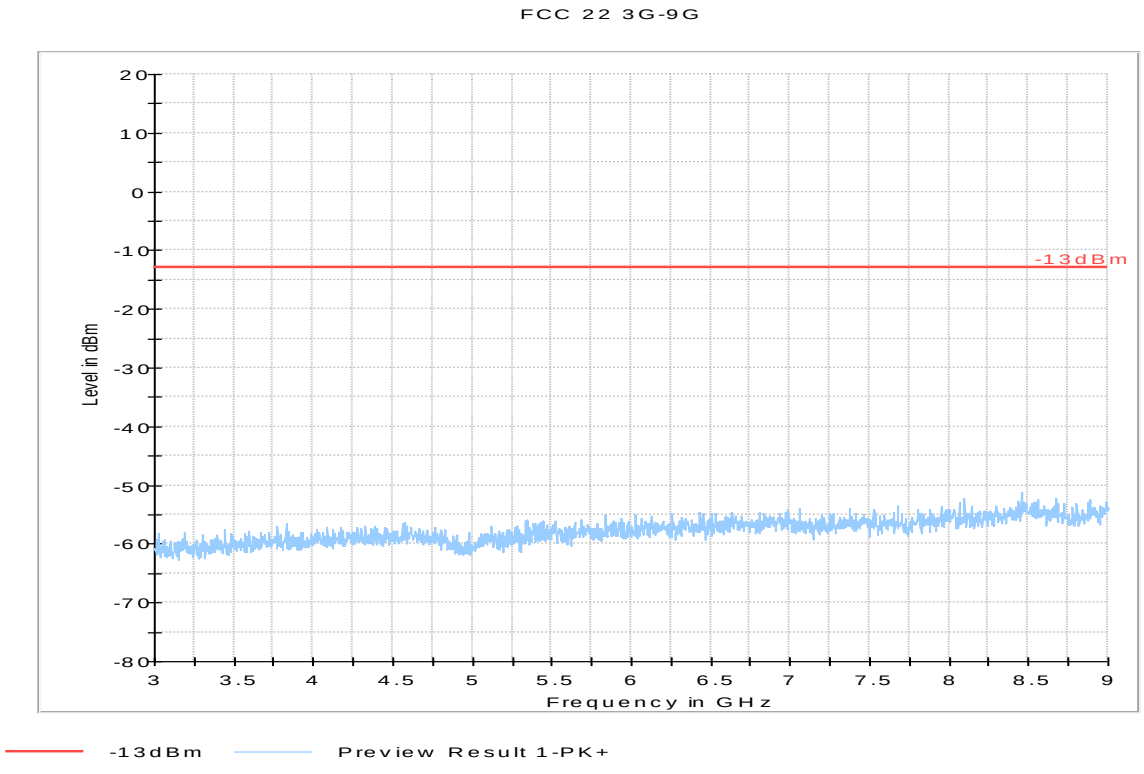
Test results – 3GHz – 9GHz –Low Channel (GSM850)



Test results – 3GHz – 9GHz –Mid Channel (GSM850)

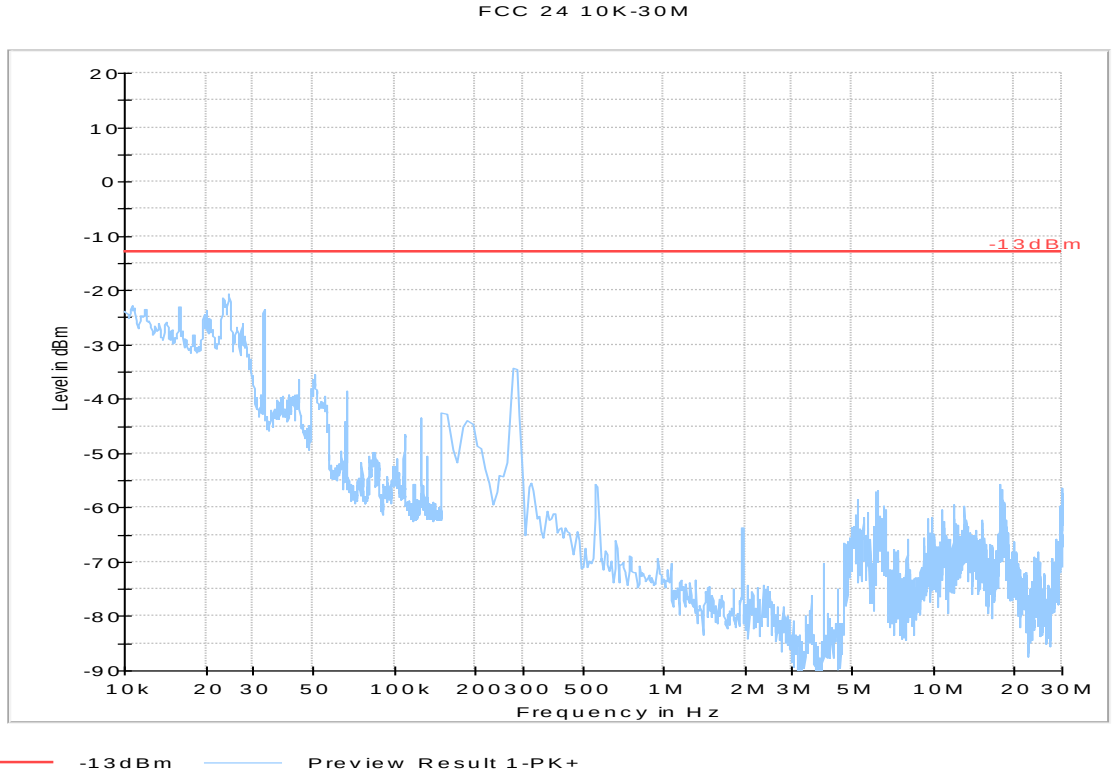


Test results – 3GHz – 9GHz –High Channel (GSM850)

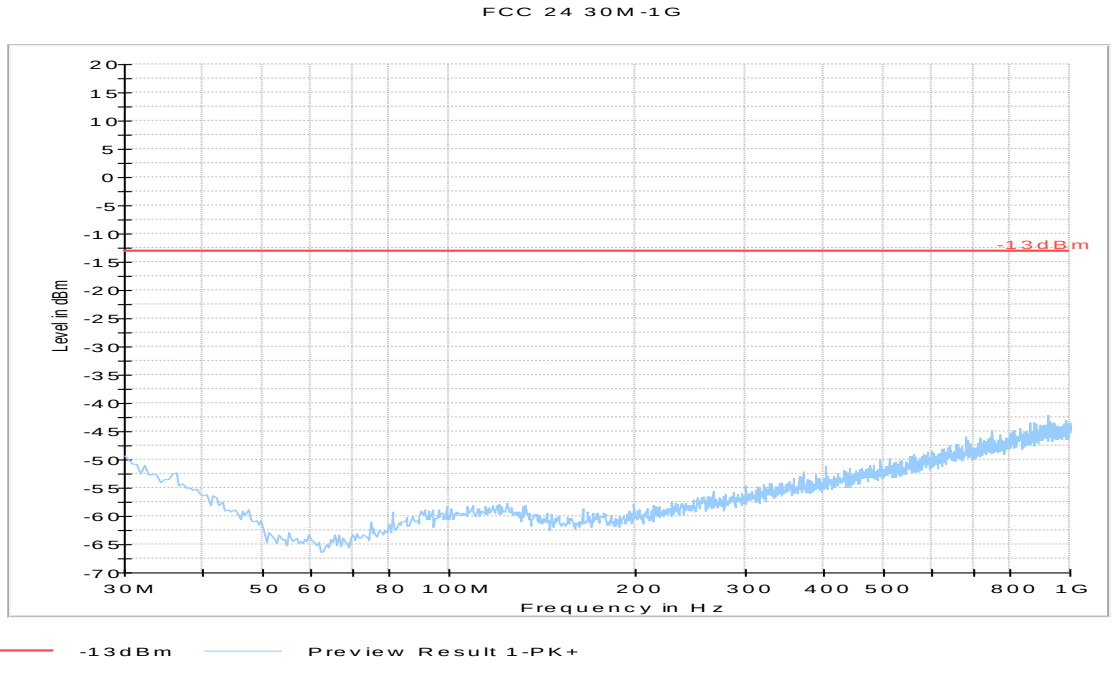


Radiated Spurious Emissions (GSM-1900) Tx:

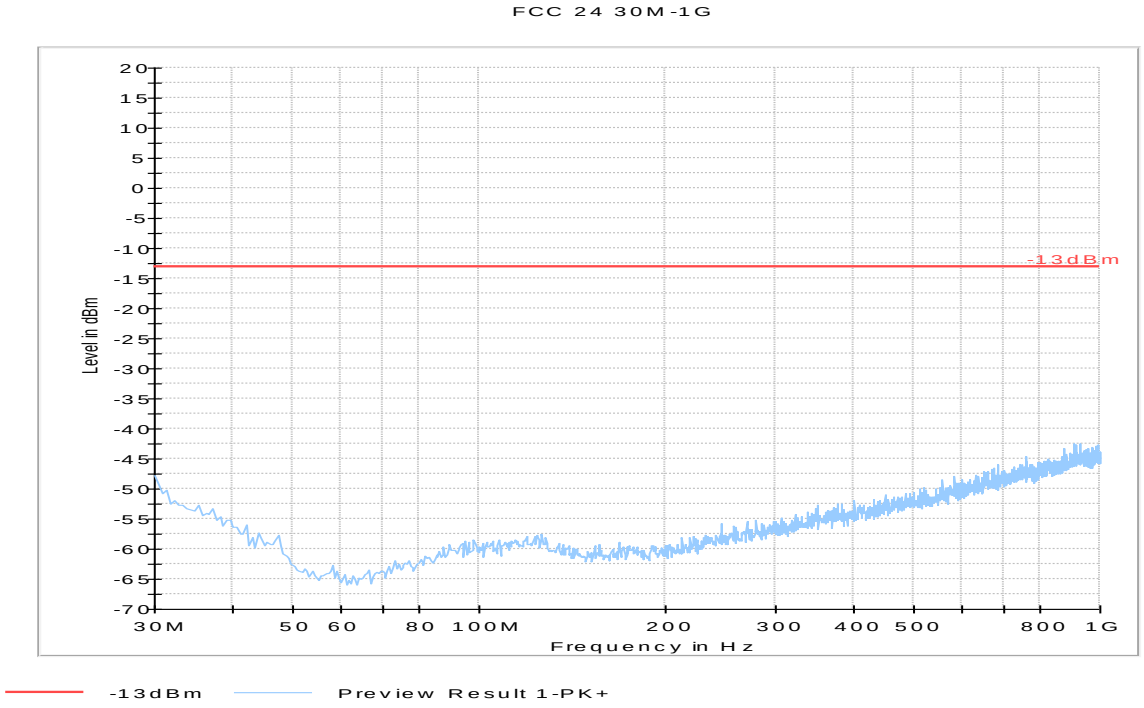
Test results 10 kHz- 30 MHz – Mid Channel (GSM-1900)



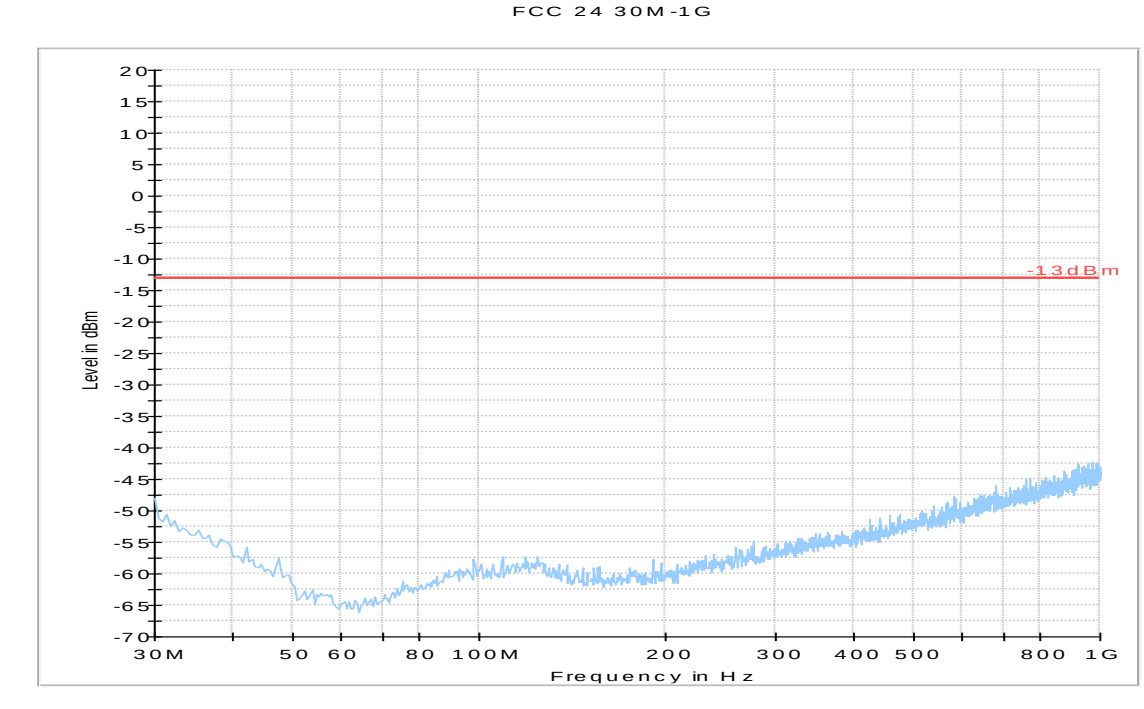
Test results – 30 MHz – 1GHz –Low Channel (GSM 1900)



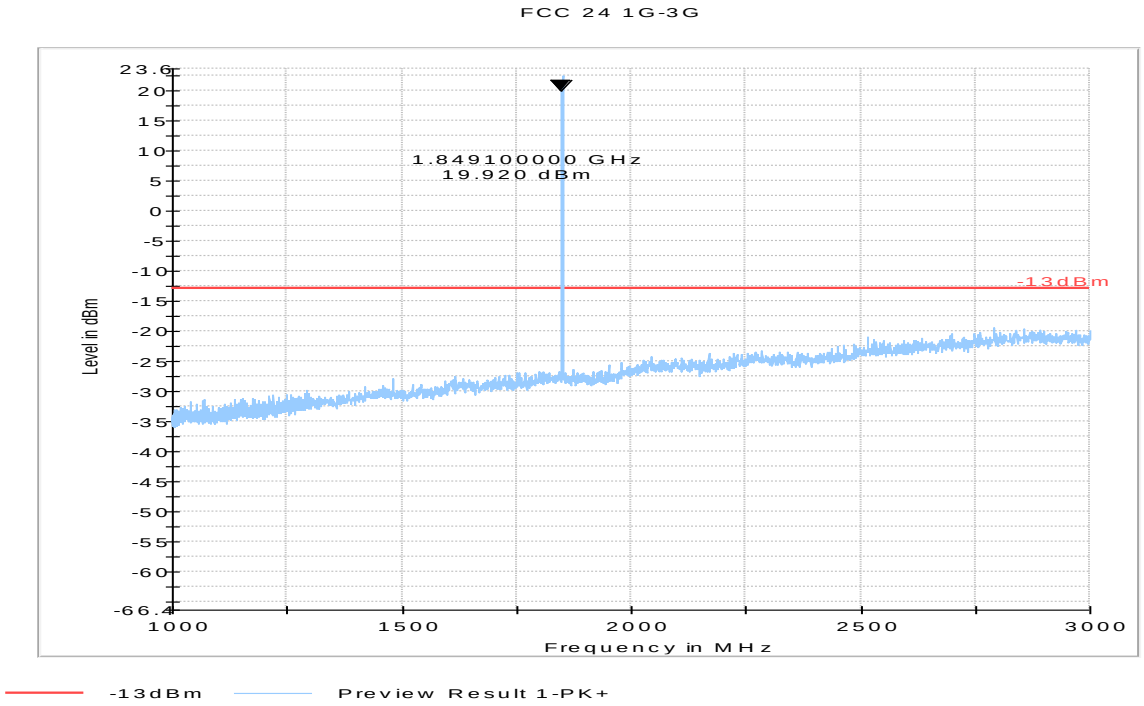
Test results – 30 MHz – 1GHz –Mid Channel (GSM 1900)



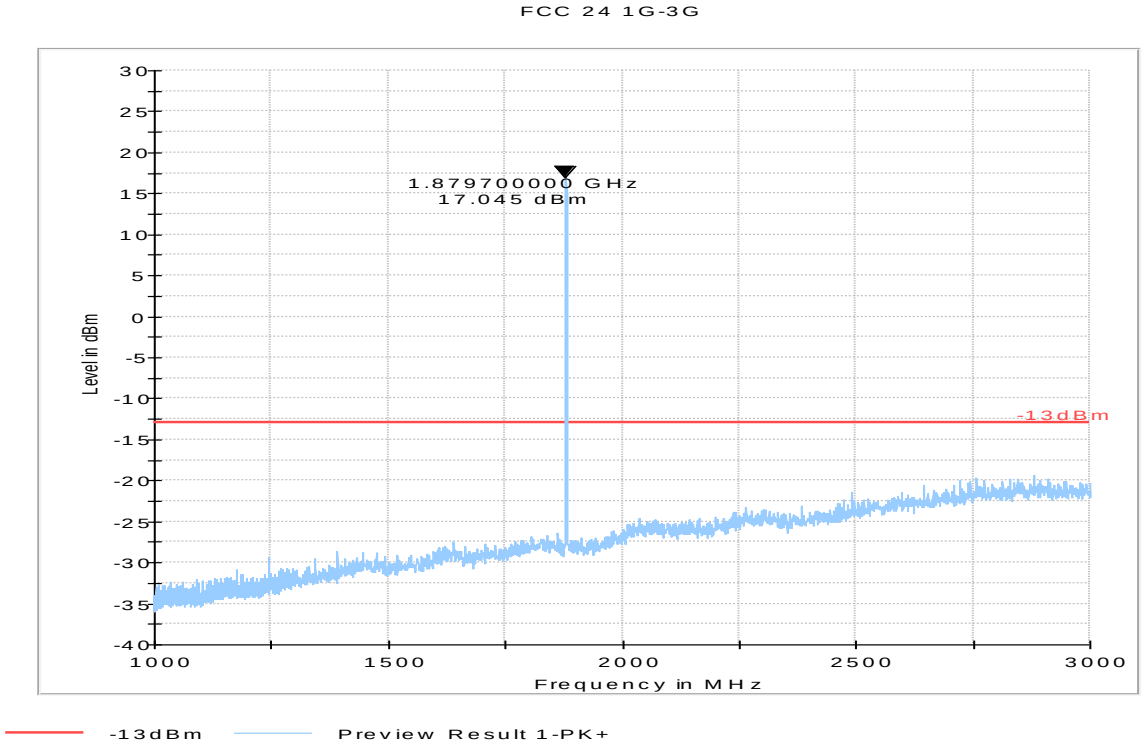
Test results – 30 MHz – 1GHz –High Channel (GSM 1900)



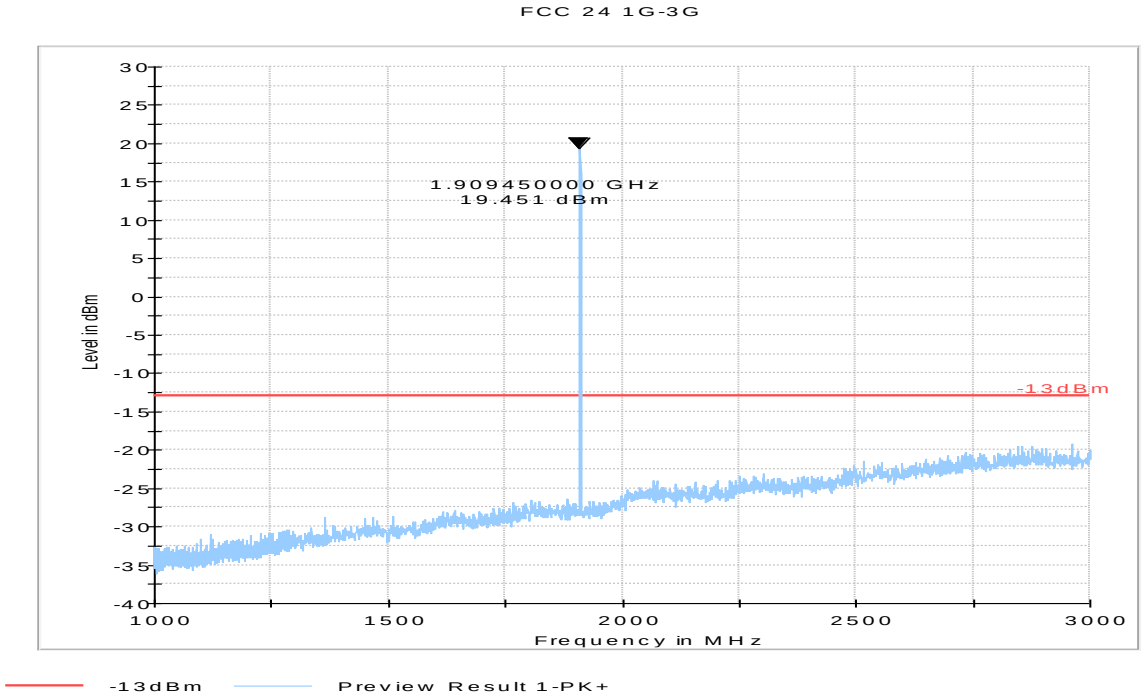
Test results – 1GHz – 3GHz –Low Channel (GSM 1900)



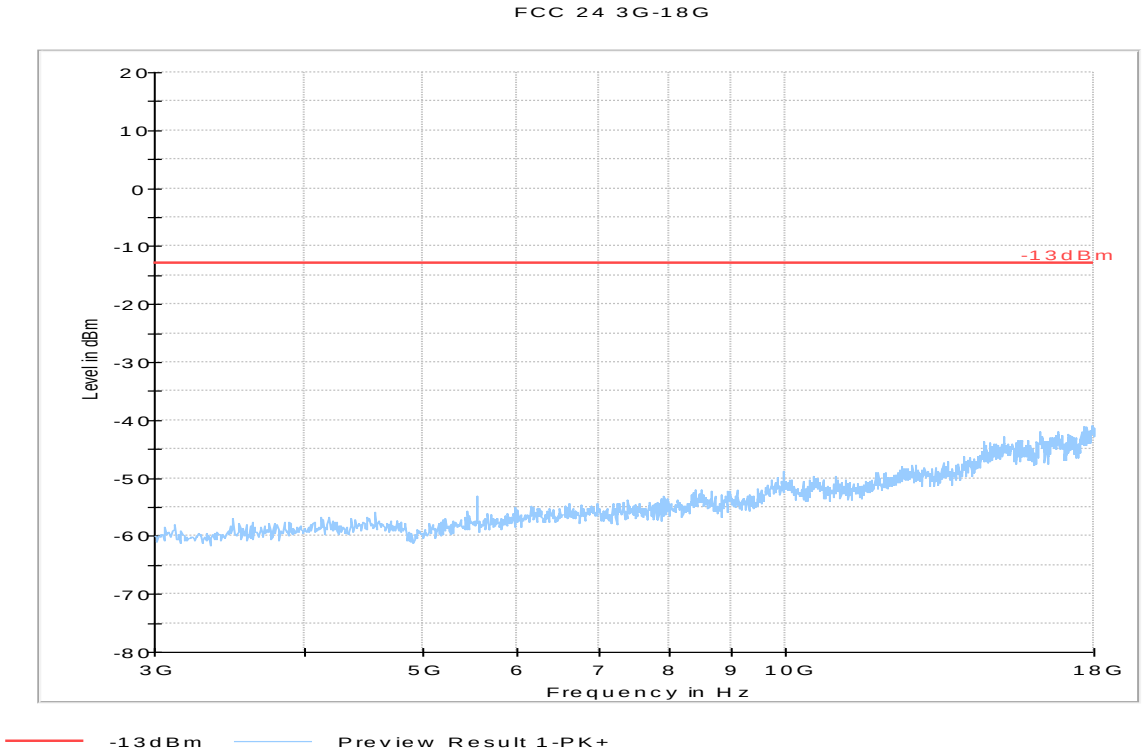
Test results – 1GHz – 3GHz –Mid Channel (GSM 1900)



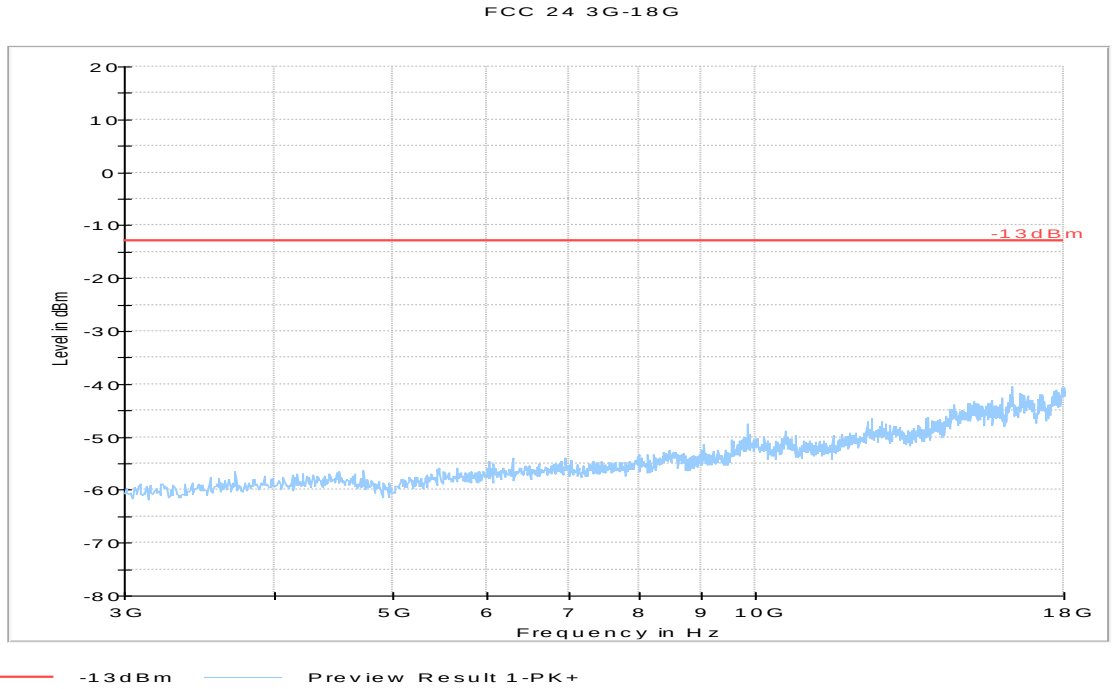
Test results – 1GHz – 3GHz –High Channel (GSM 1900)



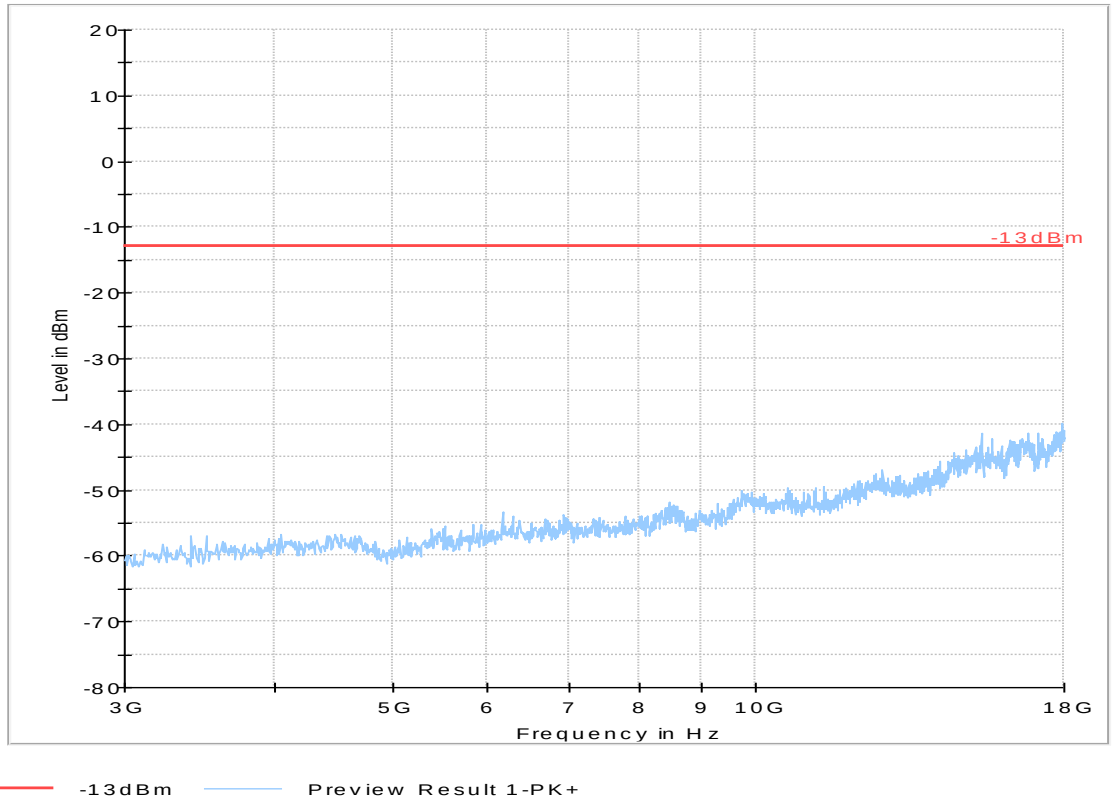
Test results – 3GHz – 18GHz –Low Channel (GSM 1900)



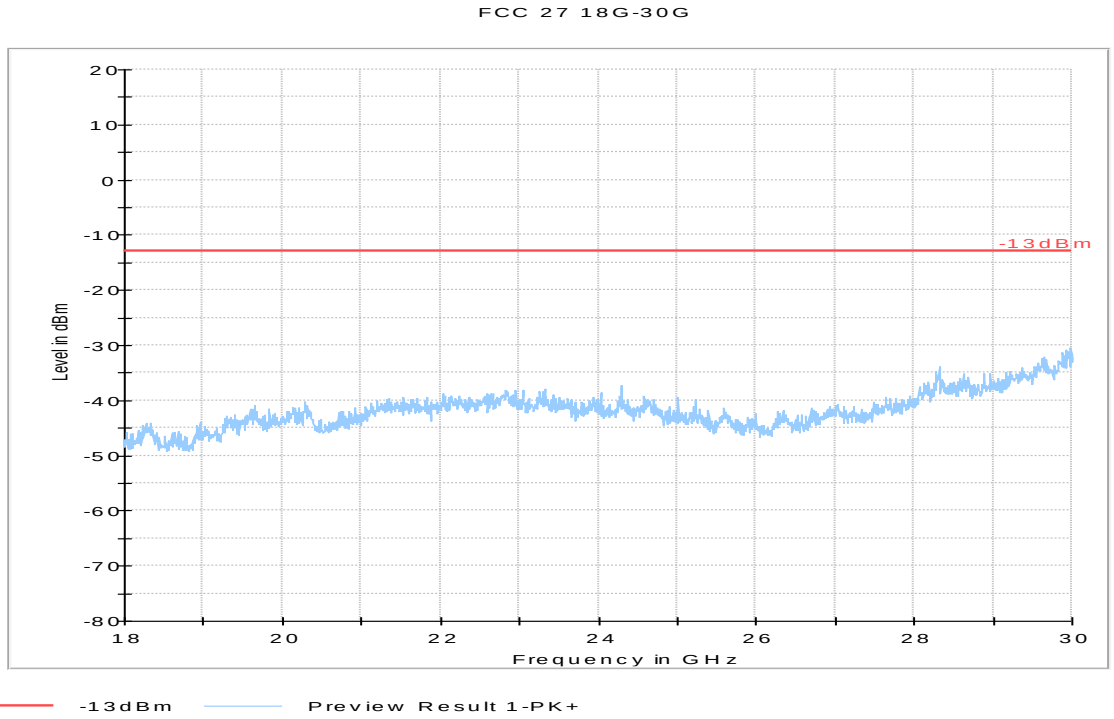
Test results – 3GHz – 18GHz –Mid Channel (GSM 1900)



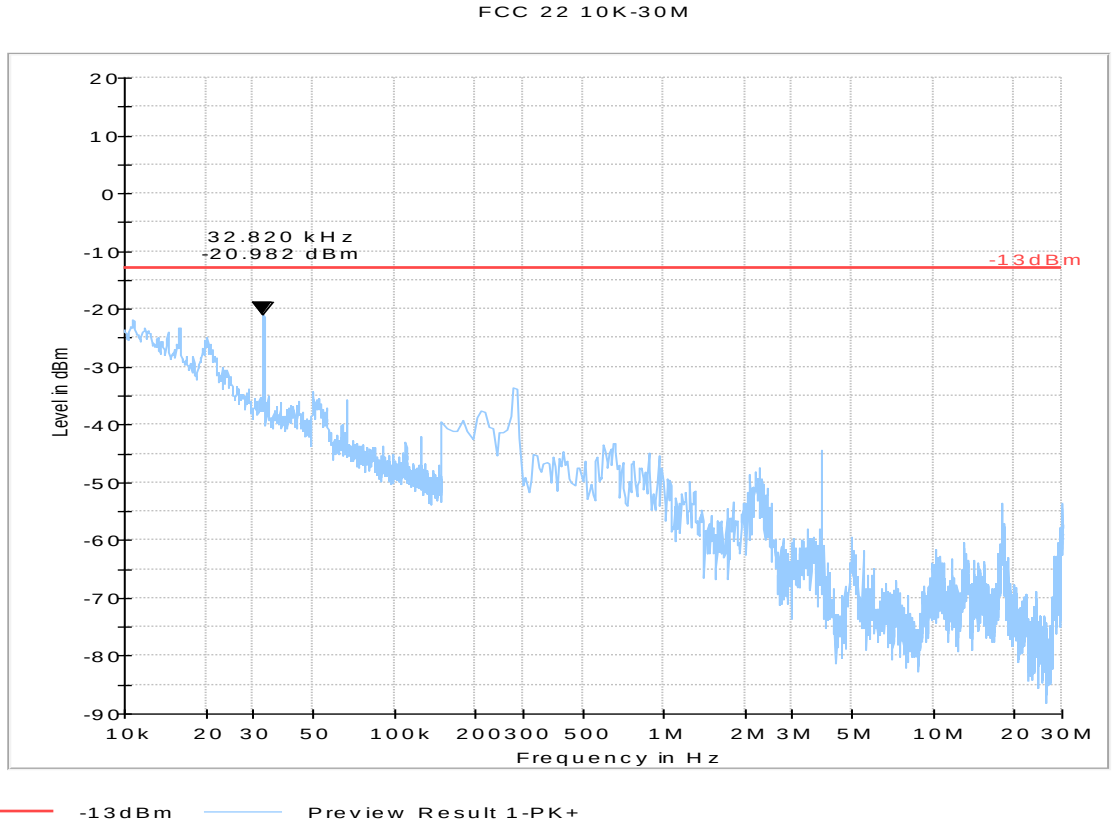
Test results – 3GHz – 18GHz –High Channel (GSM 1900)



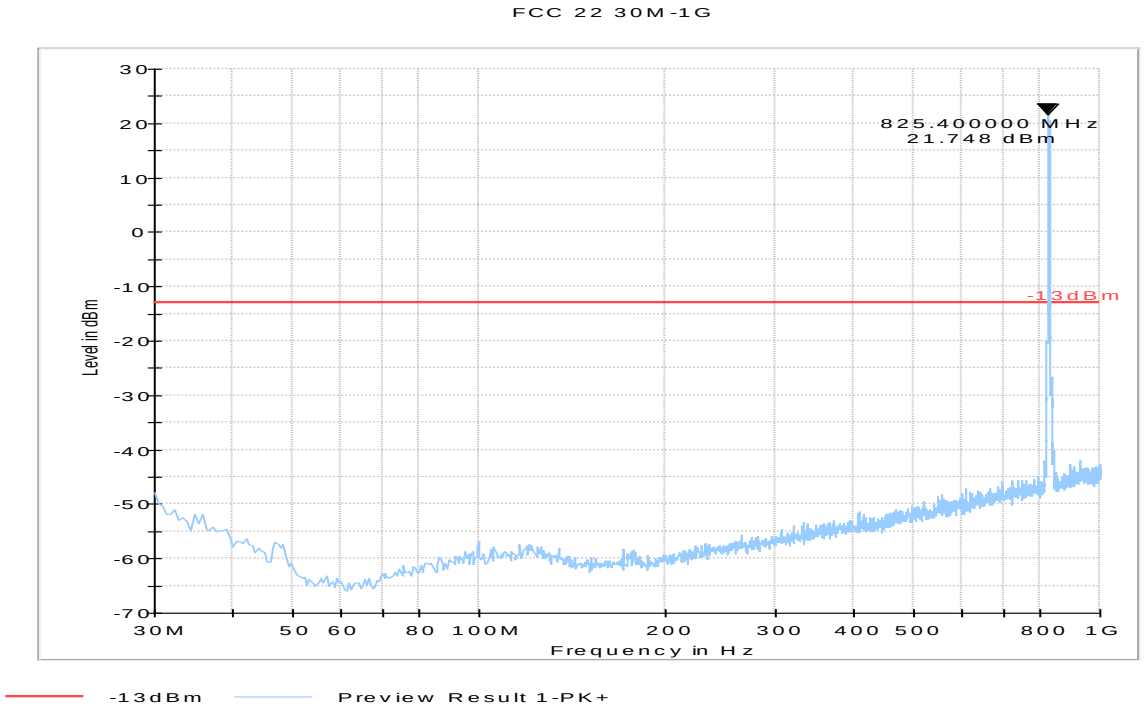
Test results – 18GHz – 30GHz –Mid Channel (GSM 1900)



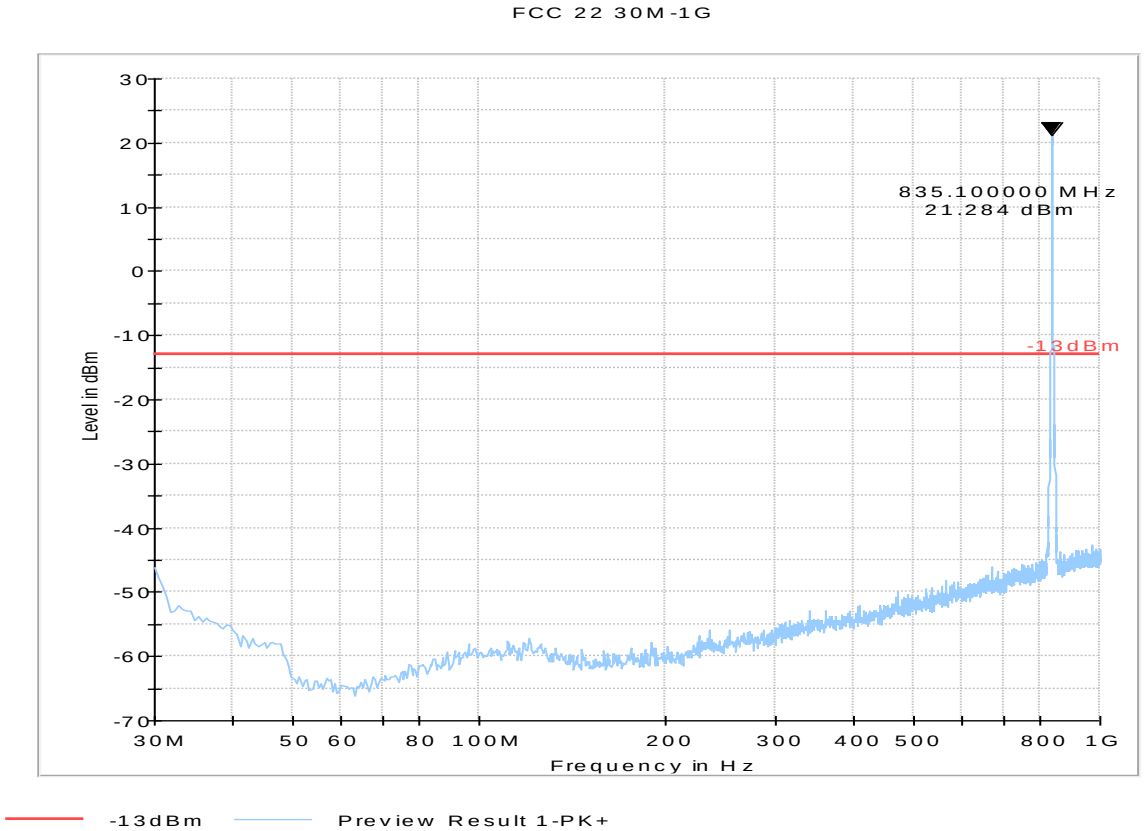
Test results 10 kHz- 30 MHz – Mid Channel (UMTS-850)



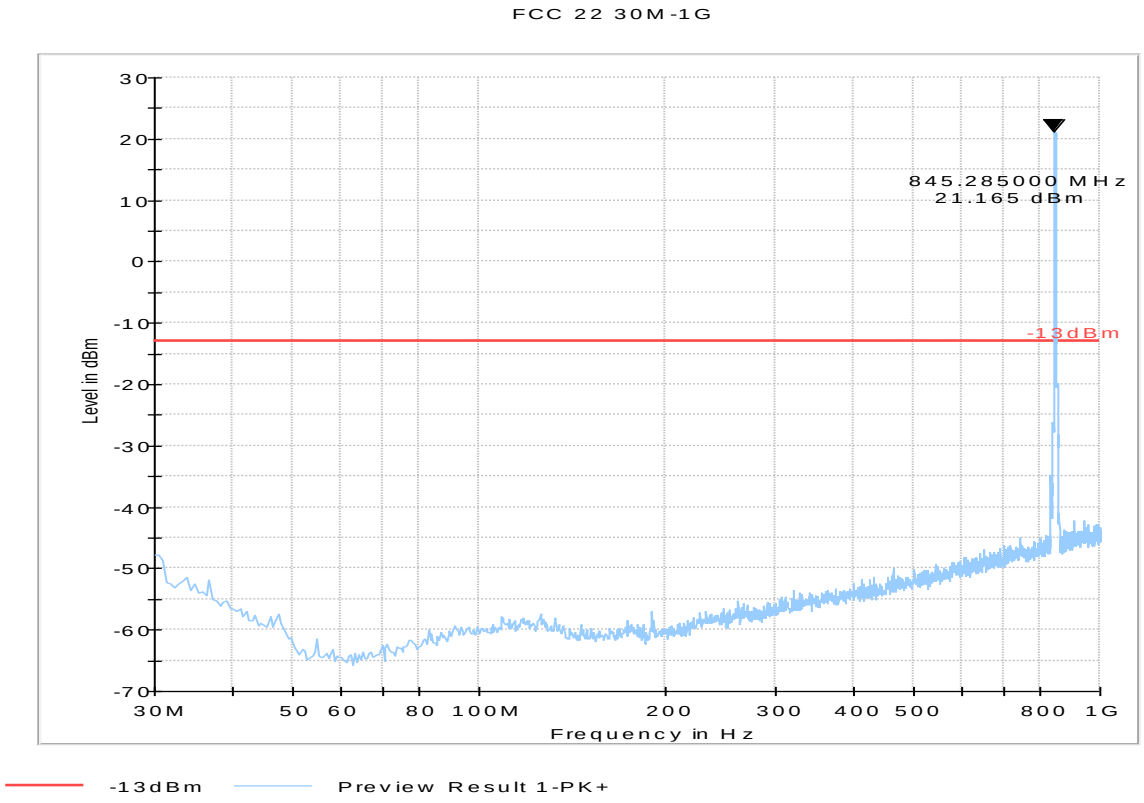
Test results – 30 MHz – 1GHz –Low Channel (UMTS 850)



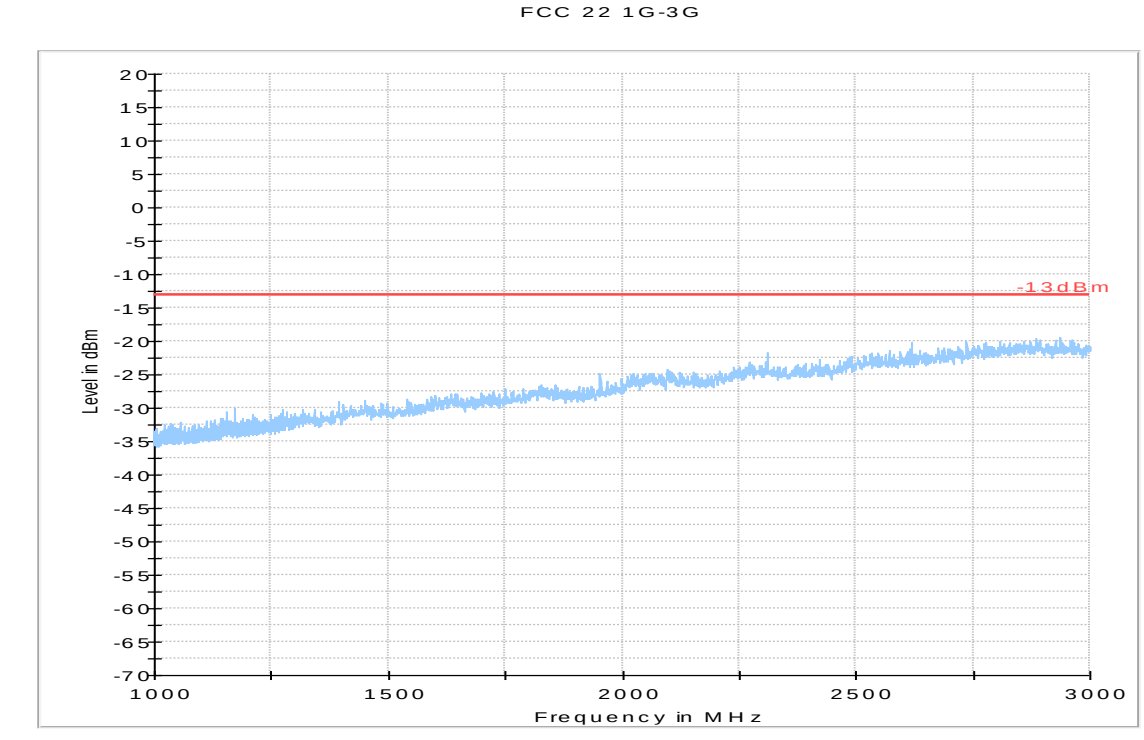
Test results – 30 MHz – 1GHz –Mid Channel (UMTS 850)



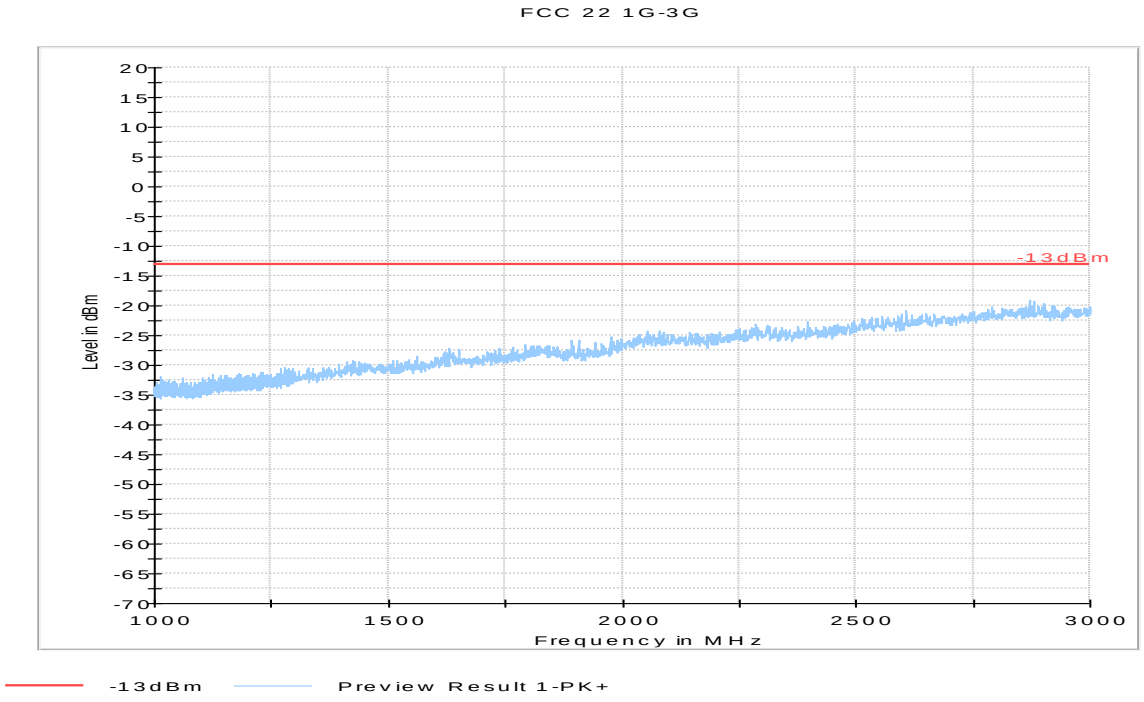
Test results – 30 MHz – 1GHz –High Channel (UMTS 850)



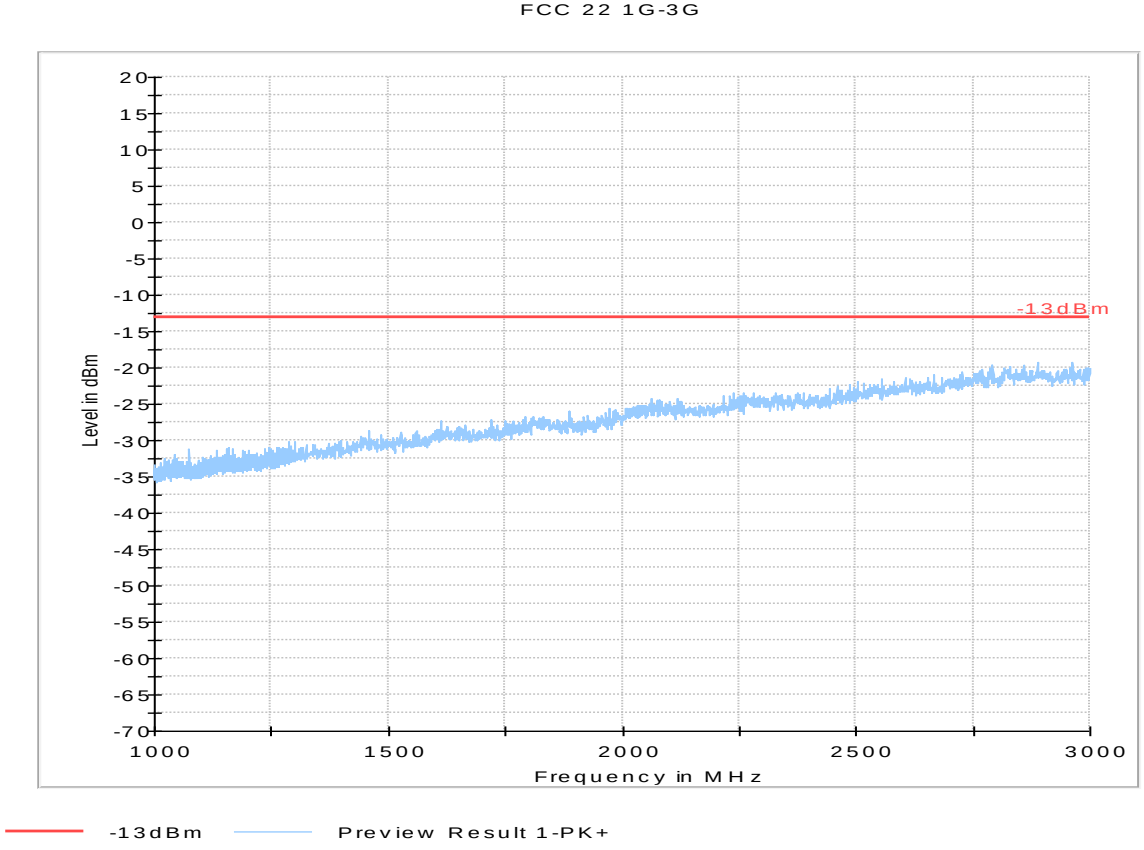
Test results – 1GHz – 3GHz –Low Channel (UMTS 850)



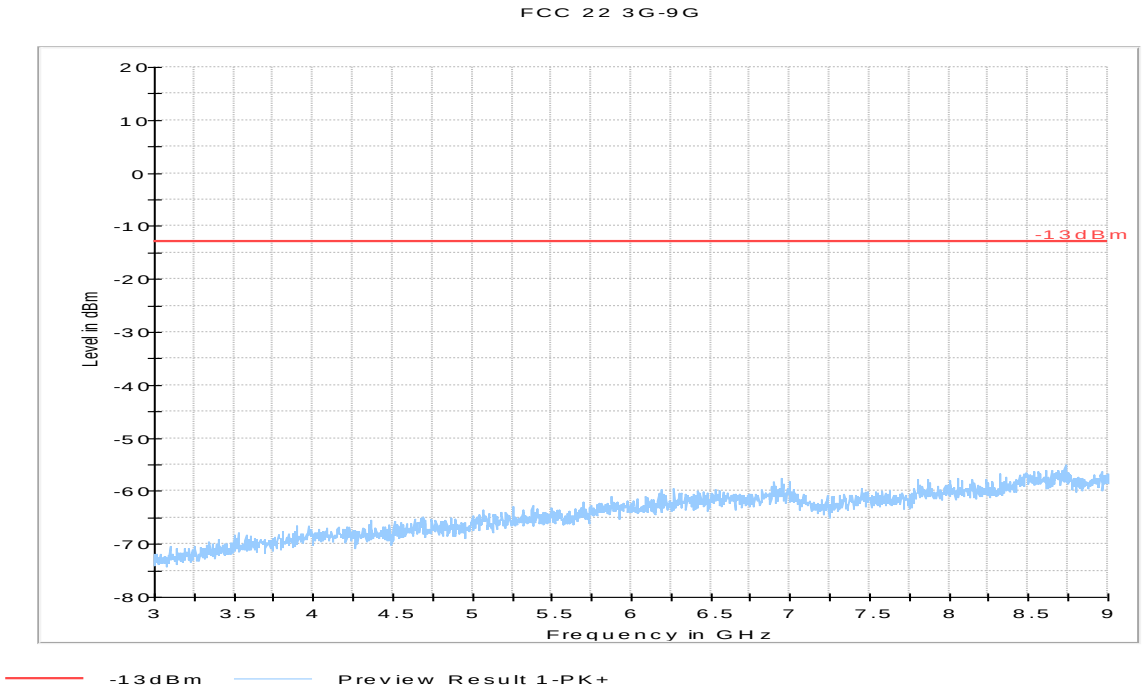
Test results – 1GHz – 3GHz –Mid Channel (UMTS 850)



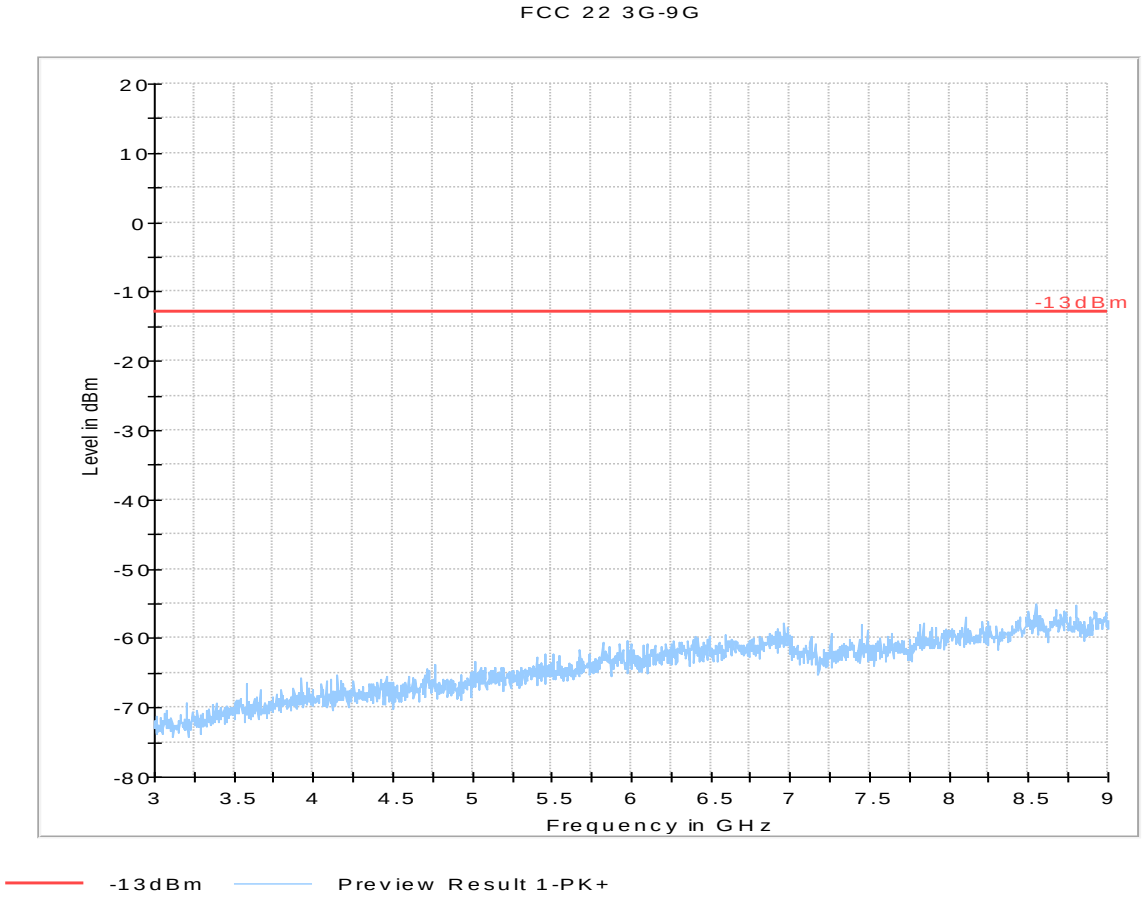
Test results – 1GHz – 3GHz –High Channel (UMTS 850)



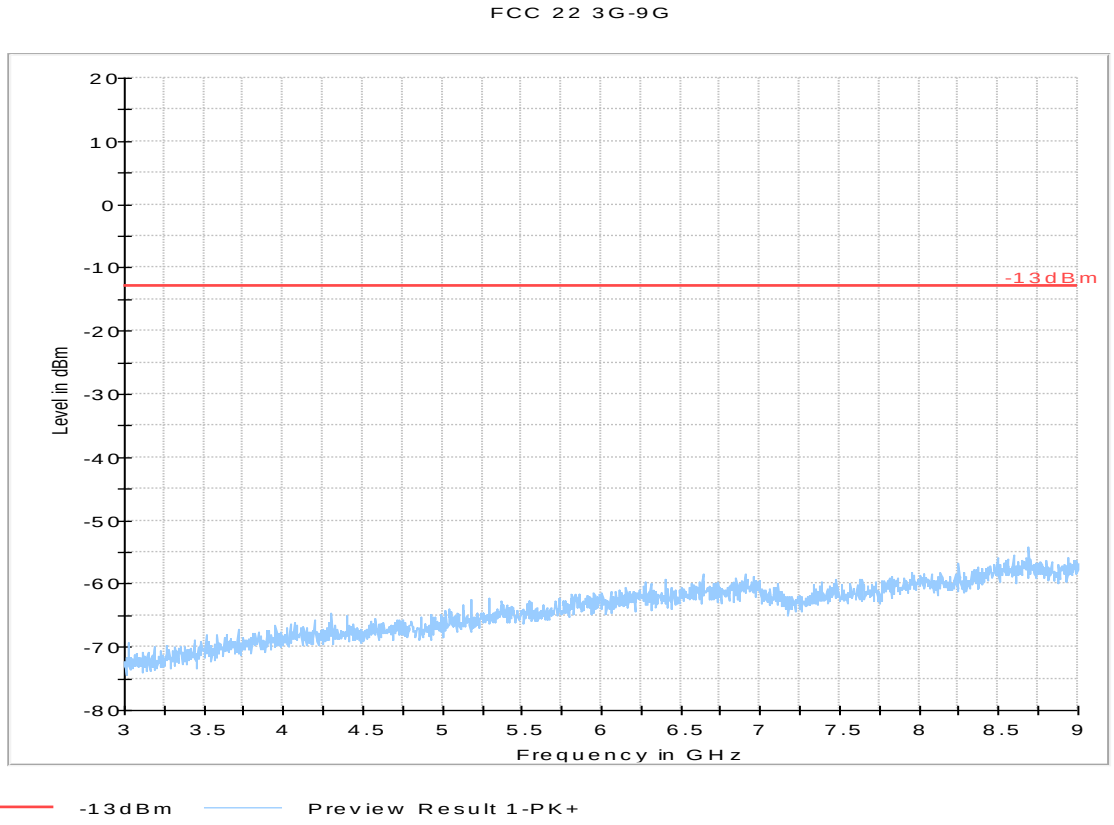
Test results – 3GHz – 9GHz –Low Channel (UMTS 850)



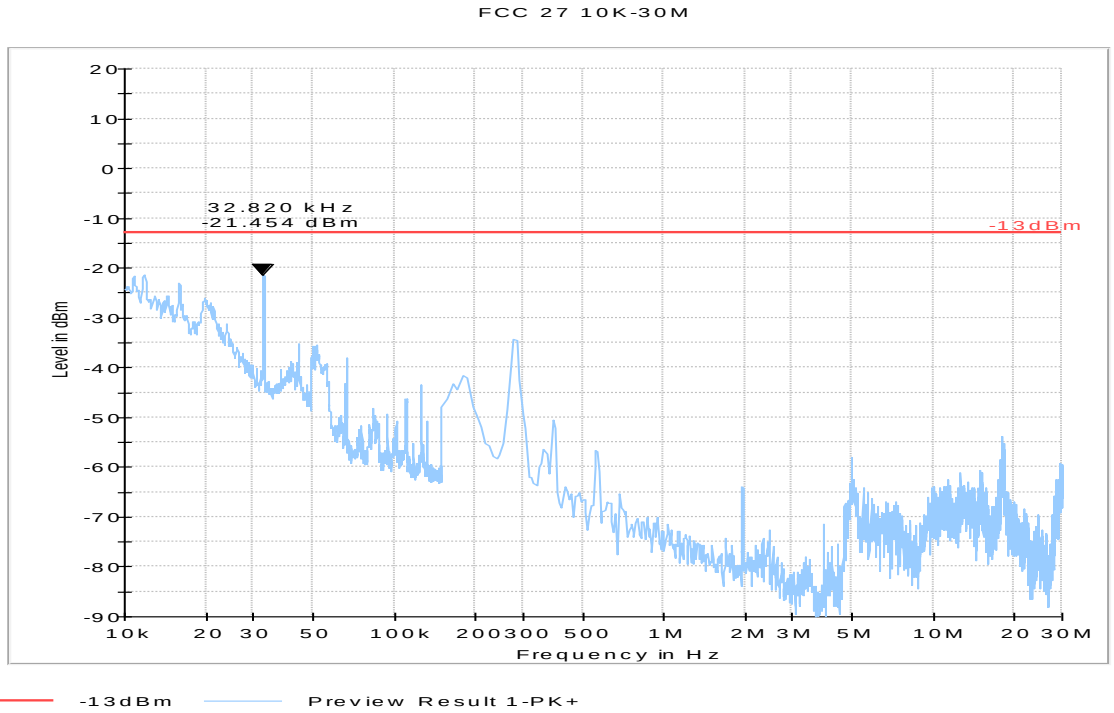
Test results – 3GHz – 18GHz –Mid Channel (UMTS 850)



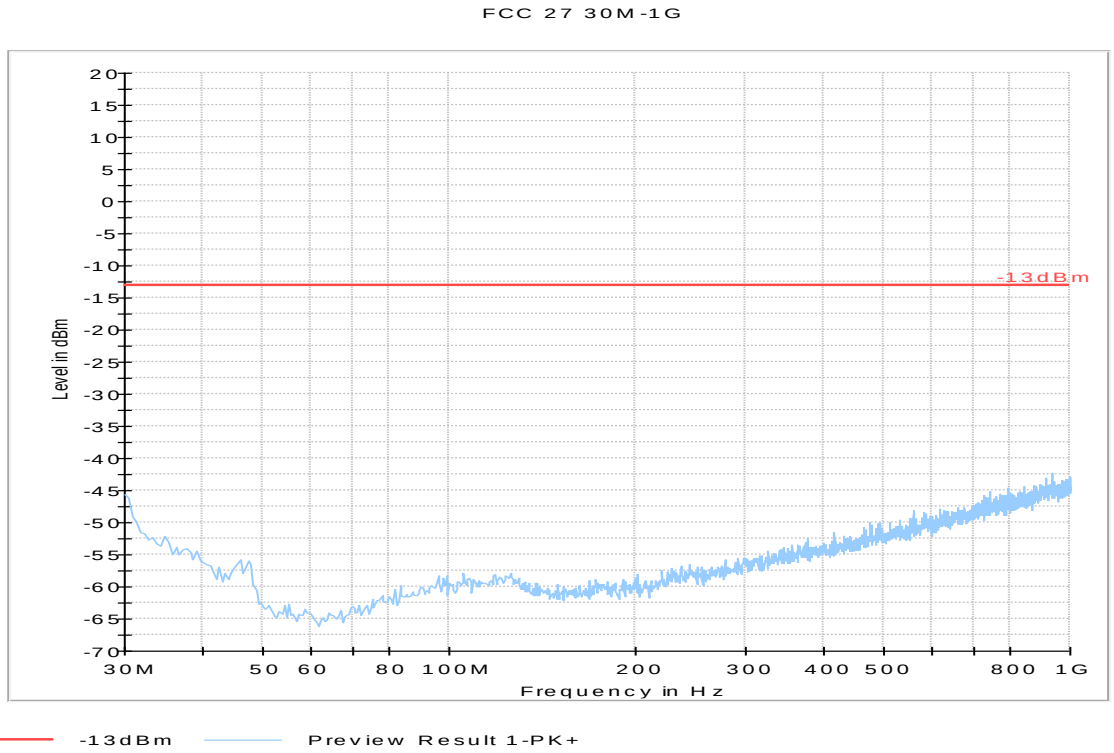
Test results – 3GHz – 18GHz –High Channel (UMTS 850)



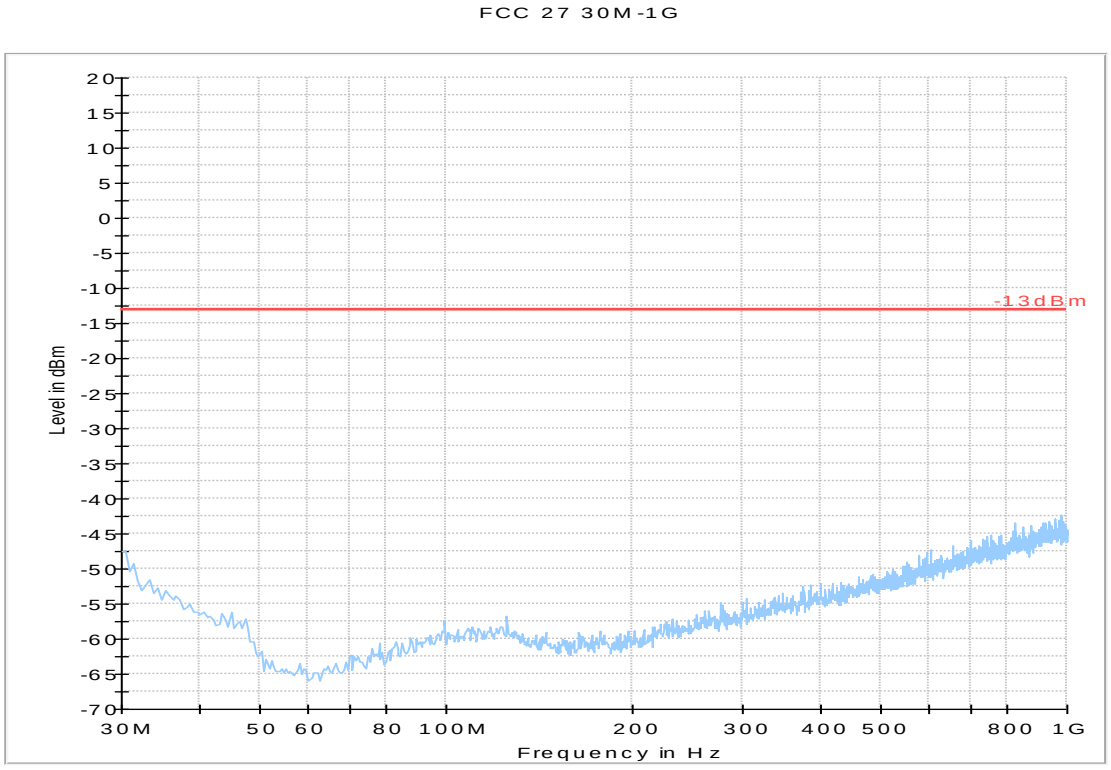
Test results 10 kHz- 30 MHz – Mid Channel (UMTS-1700)



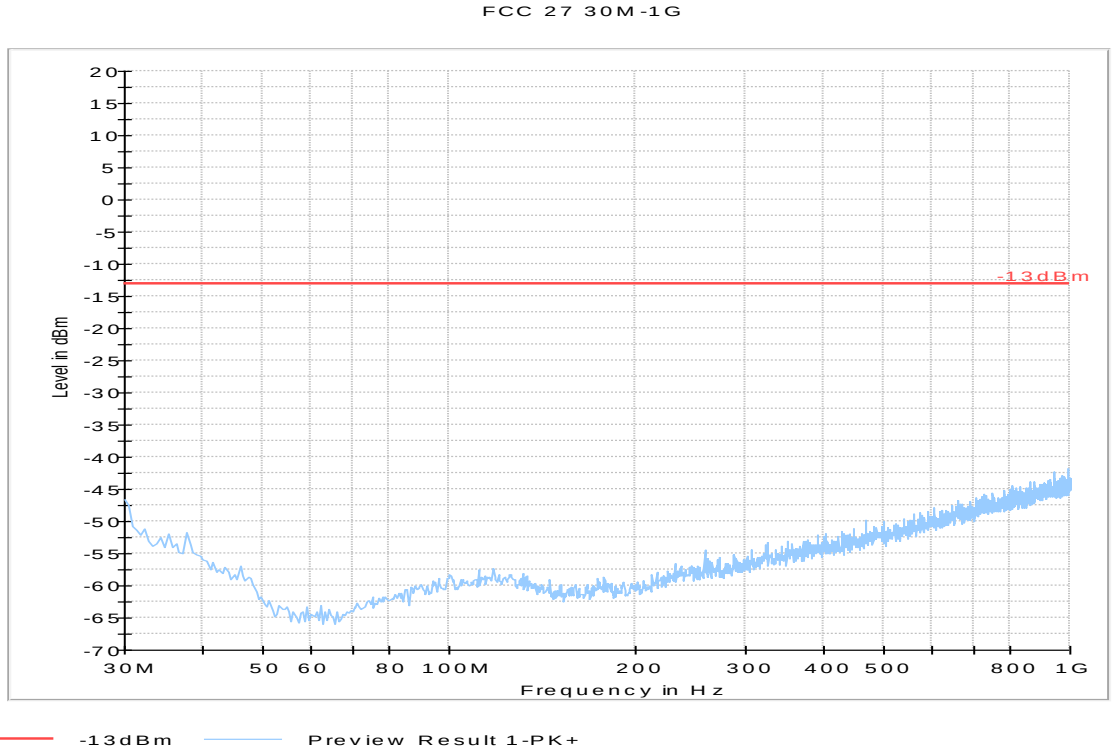
Test results – 30 MHz – 1GHz –Low Channel (UMTS-1700)



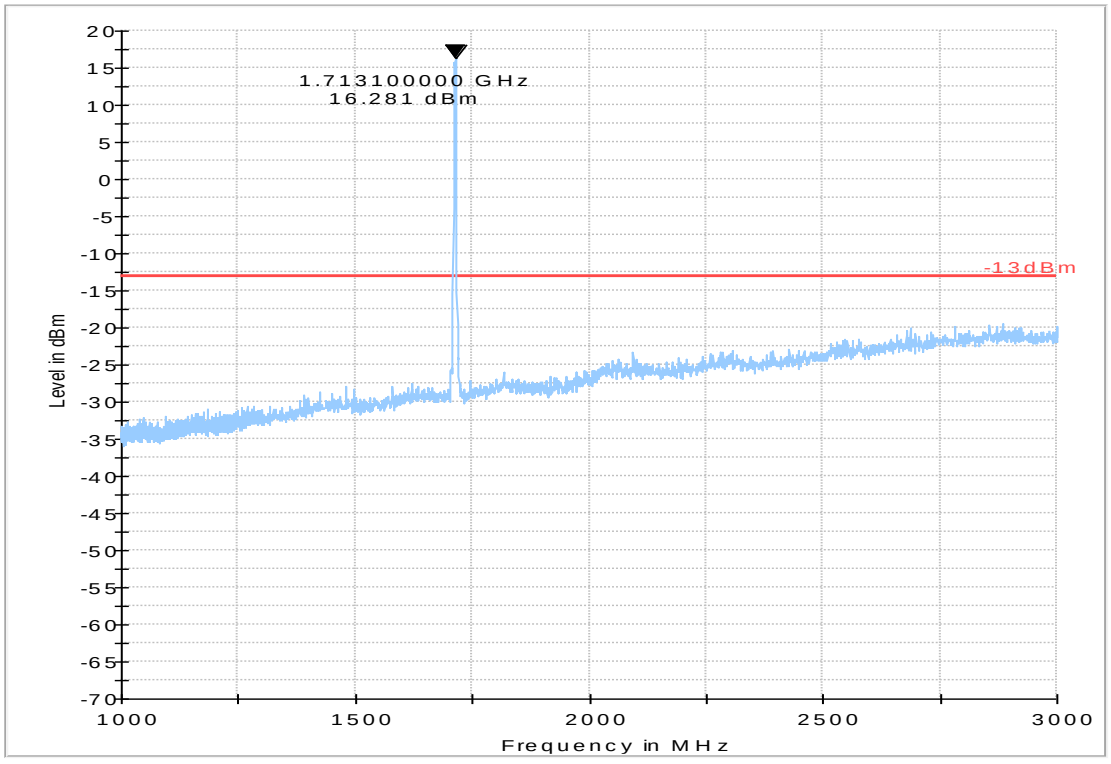
Test results – 30 MHz – 1GHz –Mid Channel (UMTS-1700)



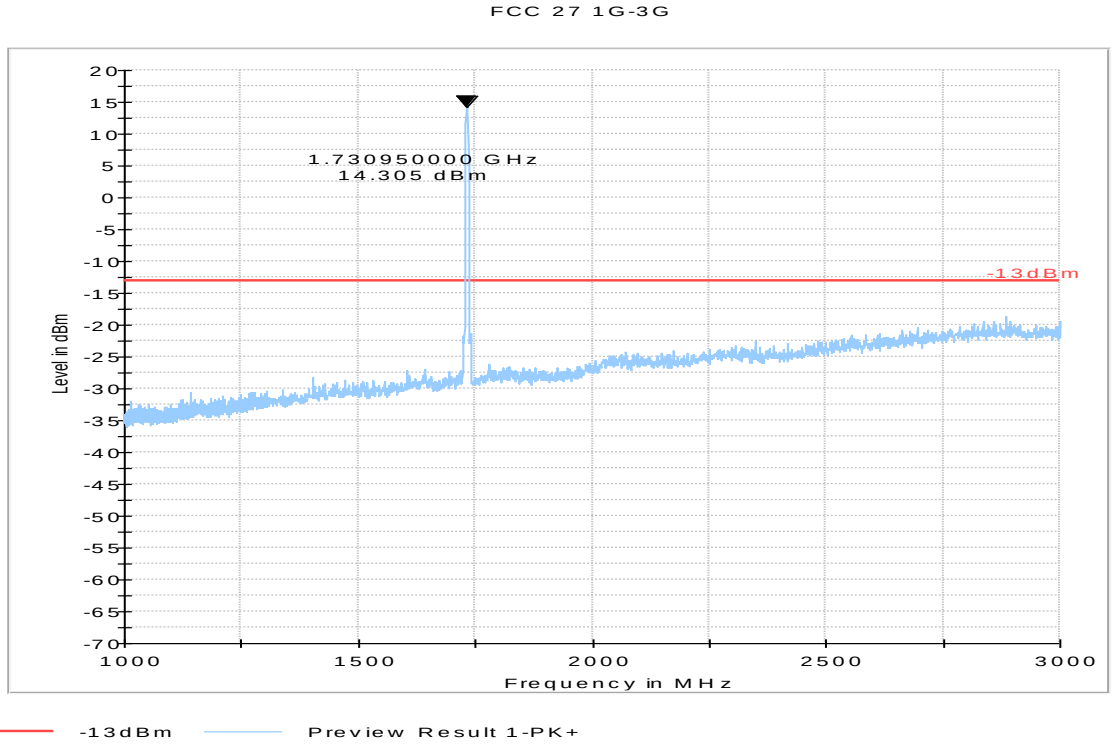
Test results – 30 MHz – 1GHz –High Channel (UMTS-1700)



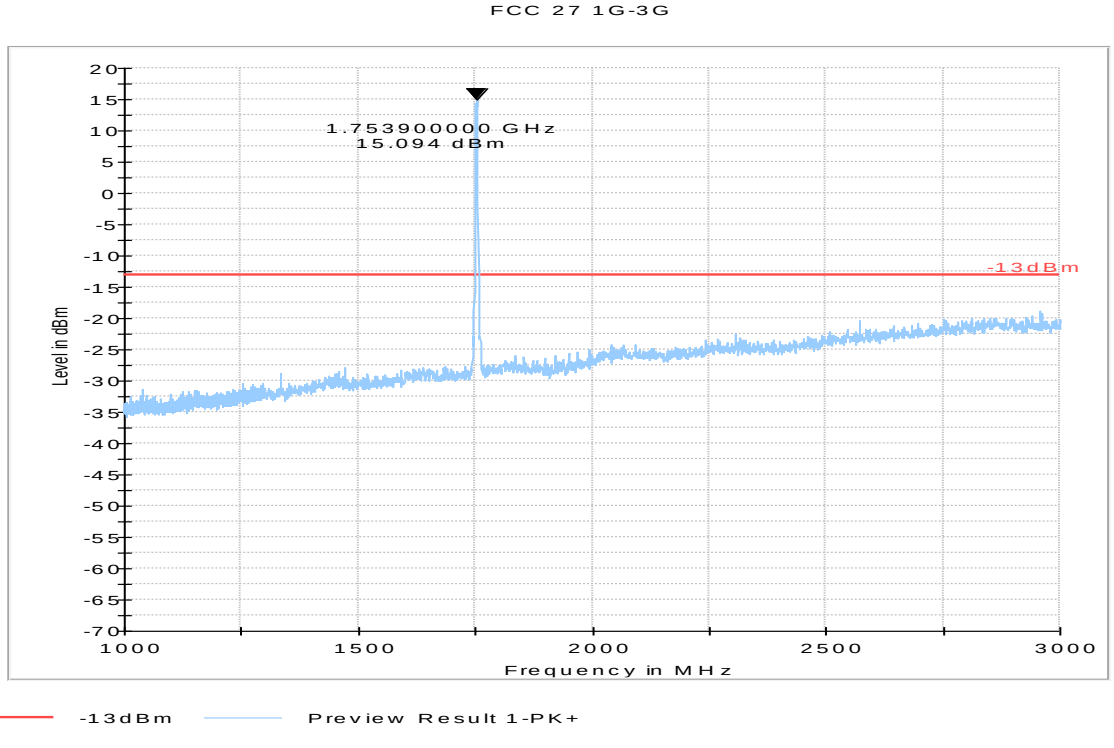
Test results – 1GHz – 3GHz –Low Channel (UMTS-1700)



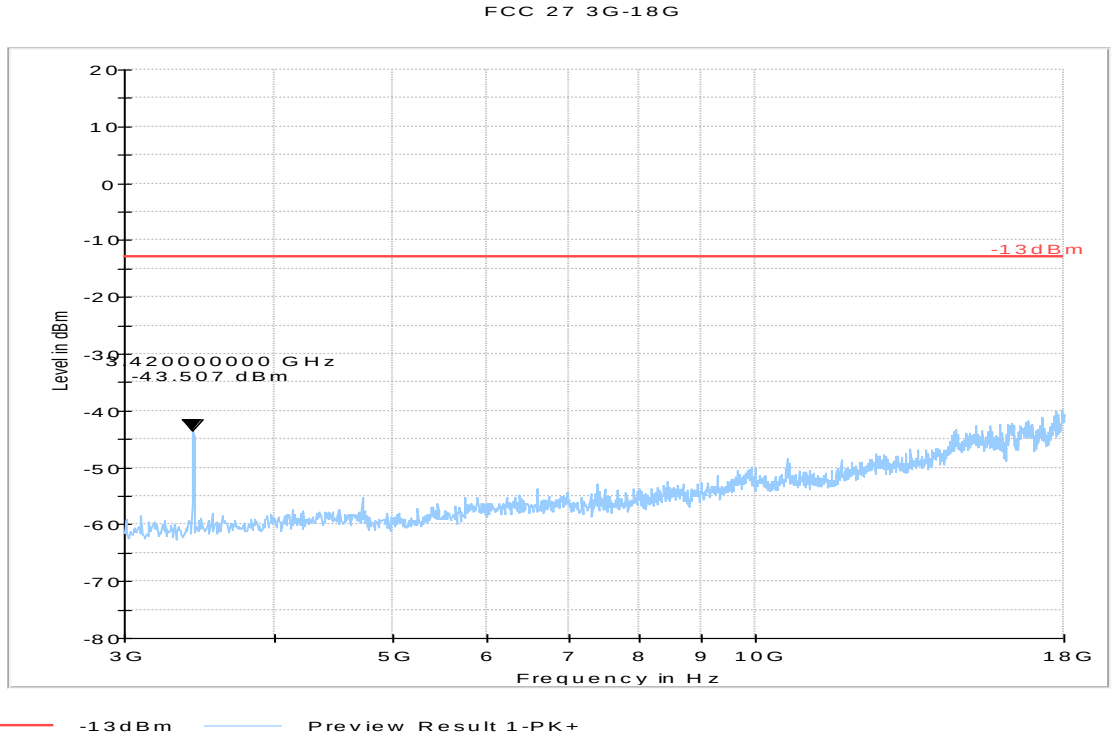
Test results – 1GHz – 3GHz –Mid Channel (UMTS-1700)



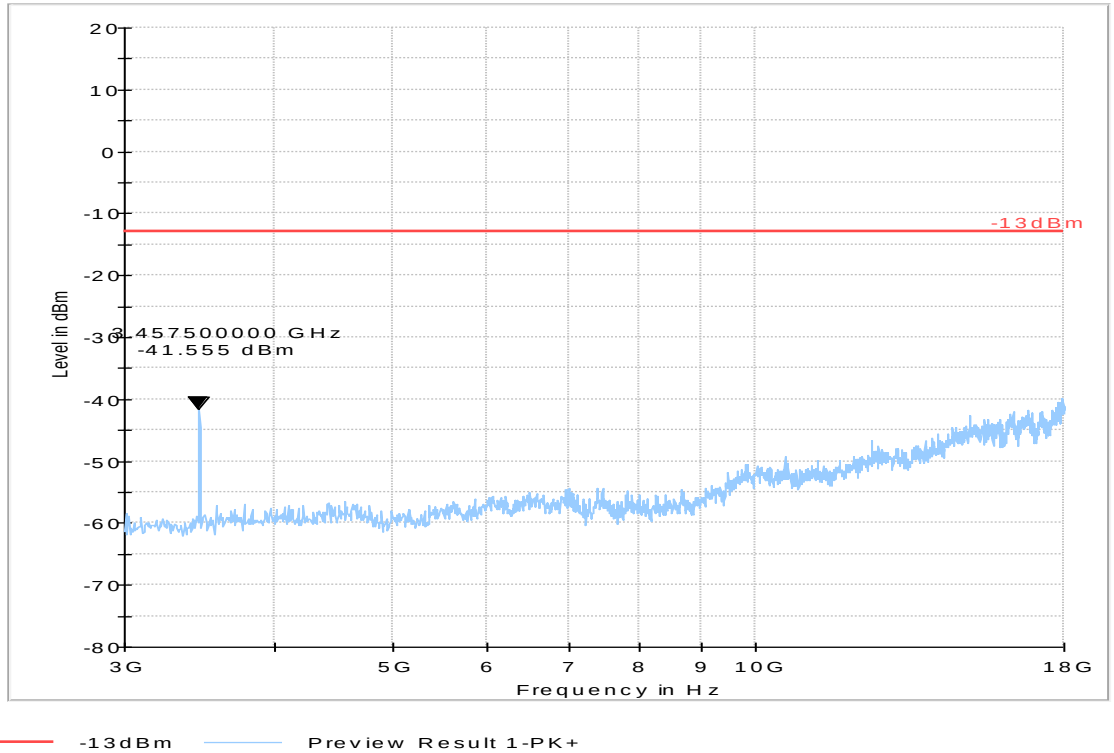
Test results – 1GHz – 3GHz –High Channel (UMTS-1700)



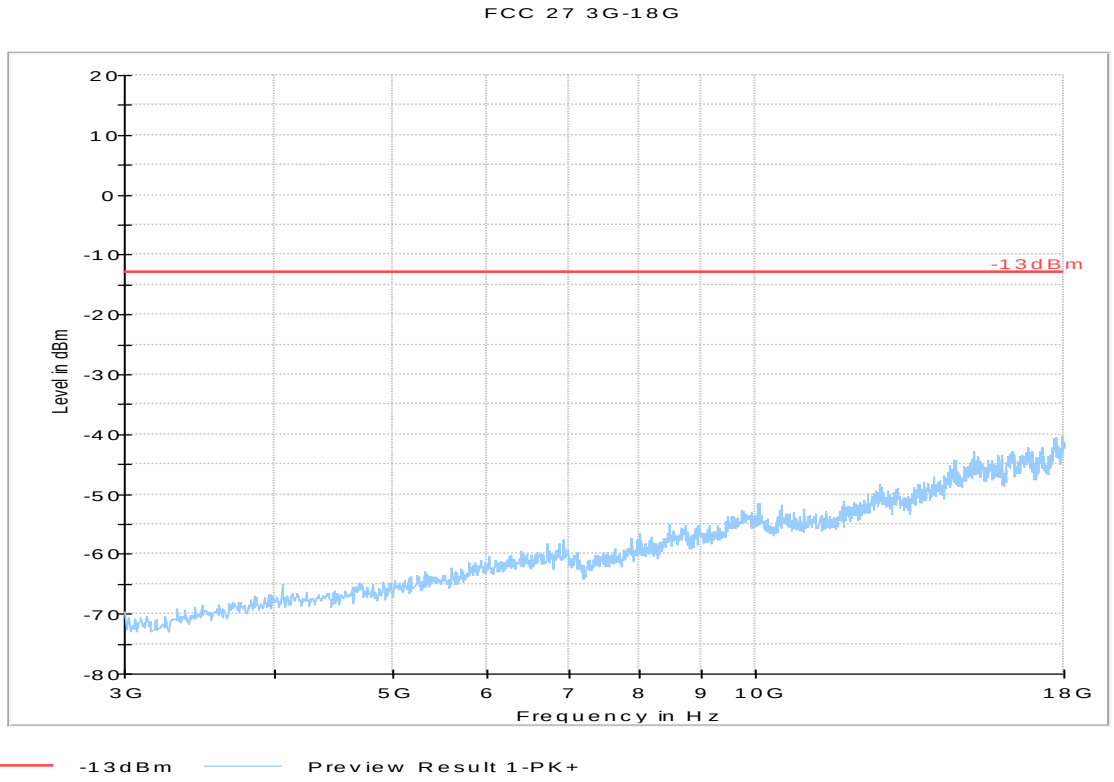
Test results – 3GHz – 18GHz –Low Channel (UMTS-1700)



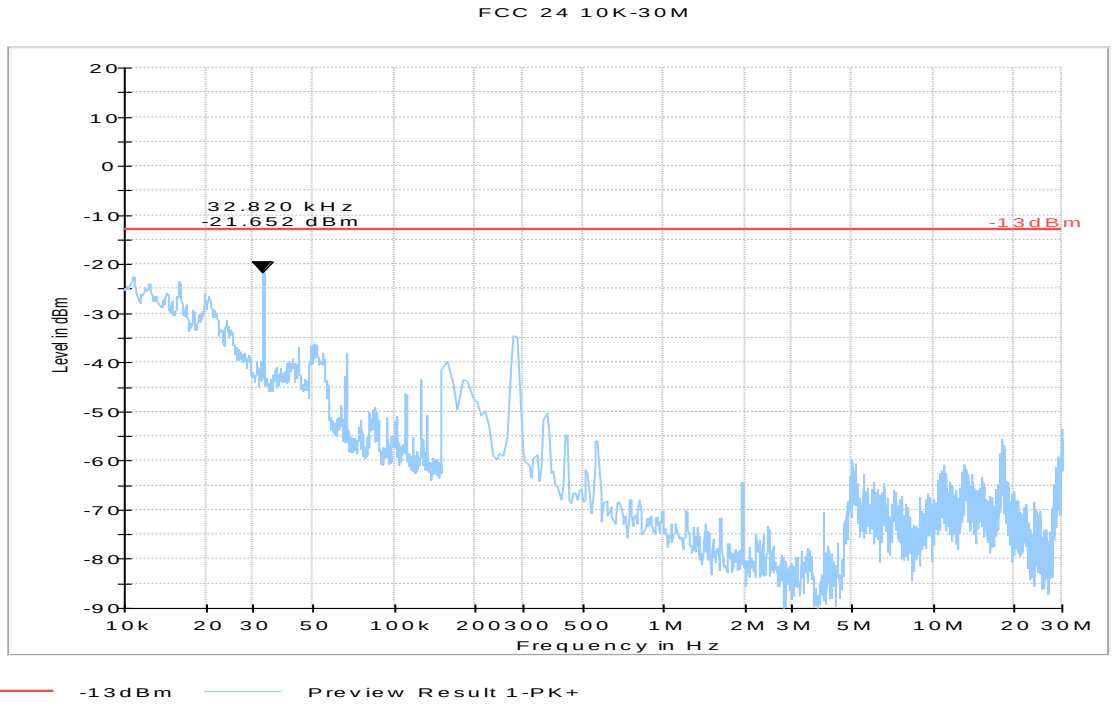
Test results – 3GHz – 18GHz –Mid Channel (UMTS-1700)



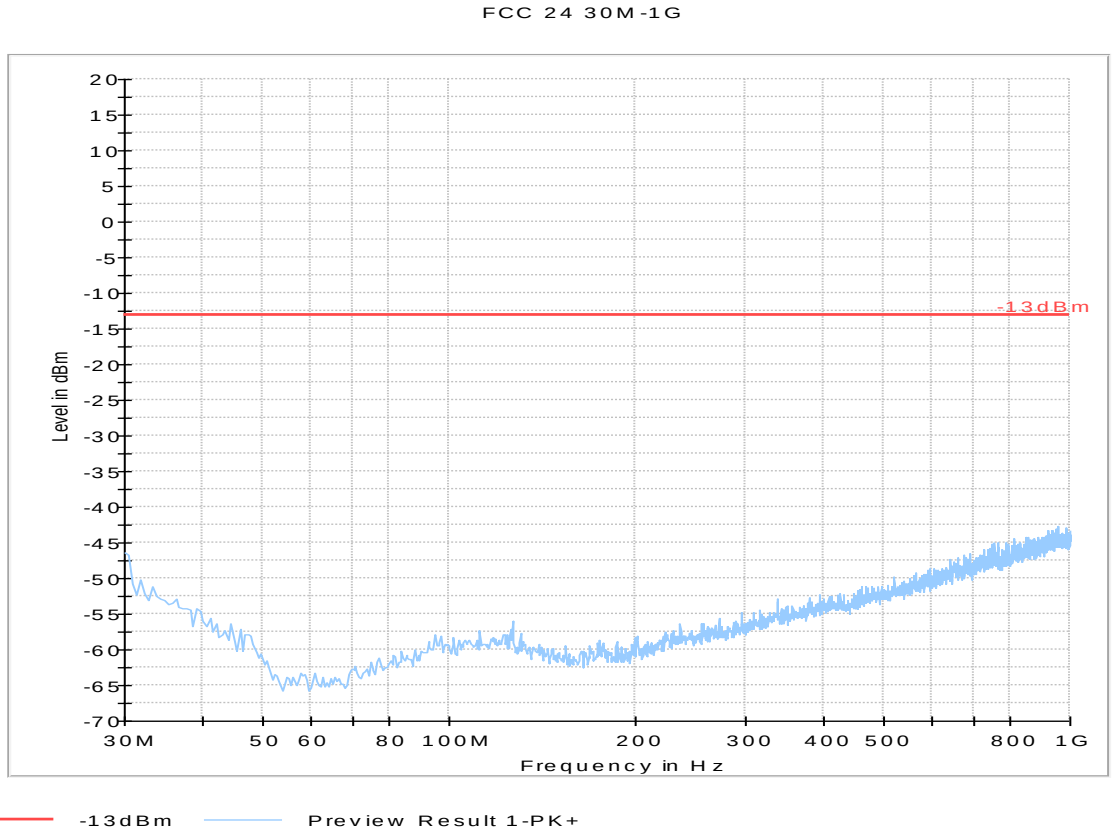
Test results – 3GHz – 18GHz –High Channel (UMTS-1700)



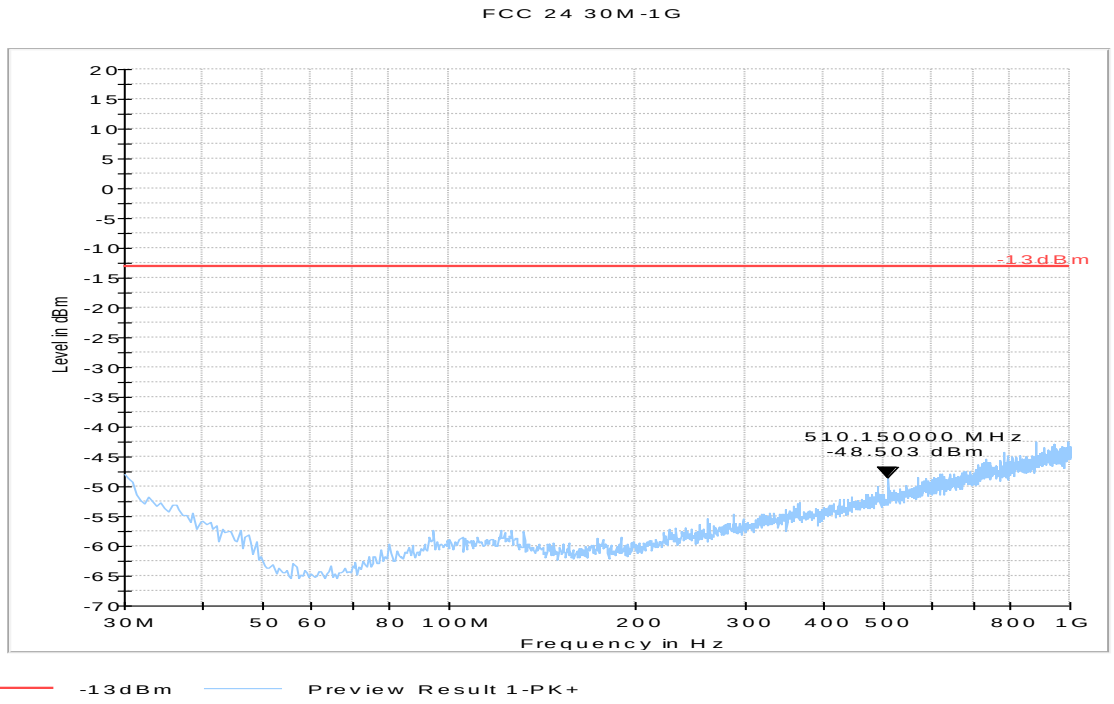
Test results 10 kHz- 30 MHz – Mid Channel (UMTS-1900)



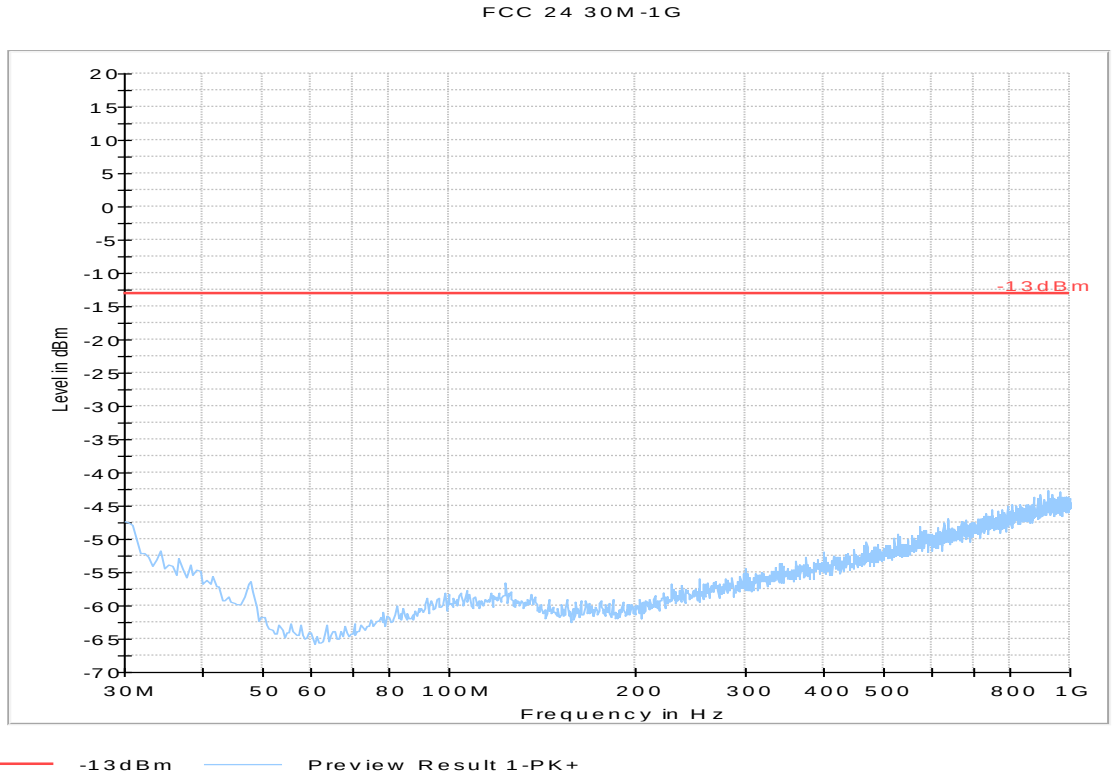
Test results – 30 MHz – 1GHz –Low Channel (UMTS 1900)



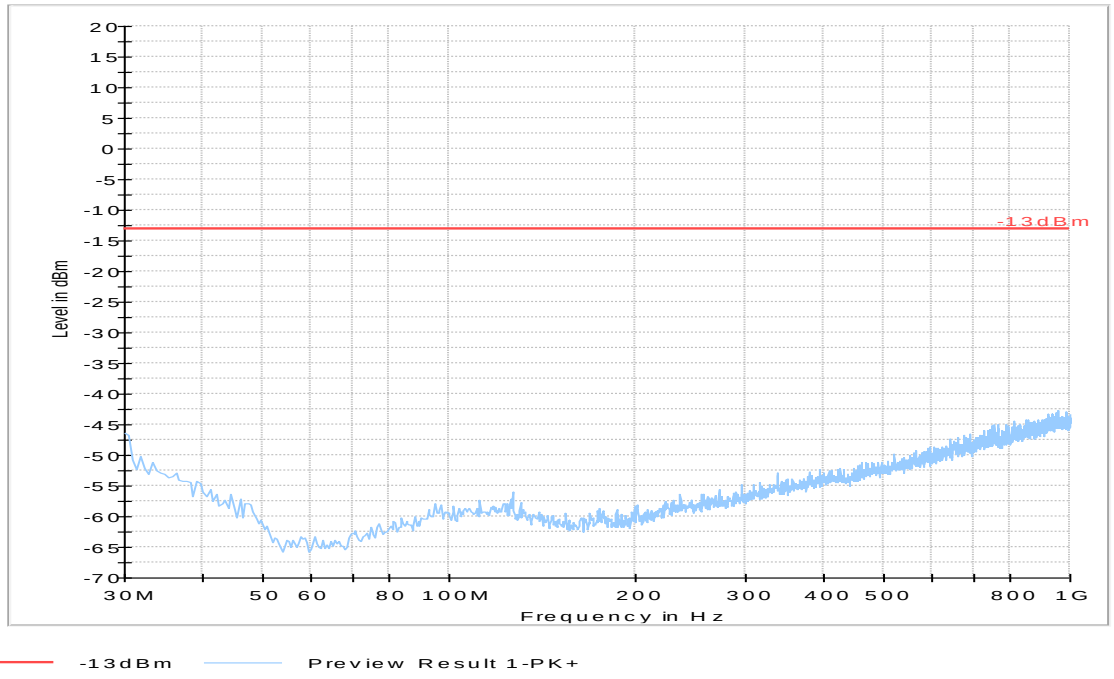
Test results – 30 MHz – 1GHz –Mid Channel (UMTS 1900)



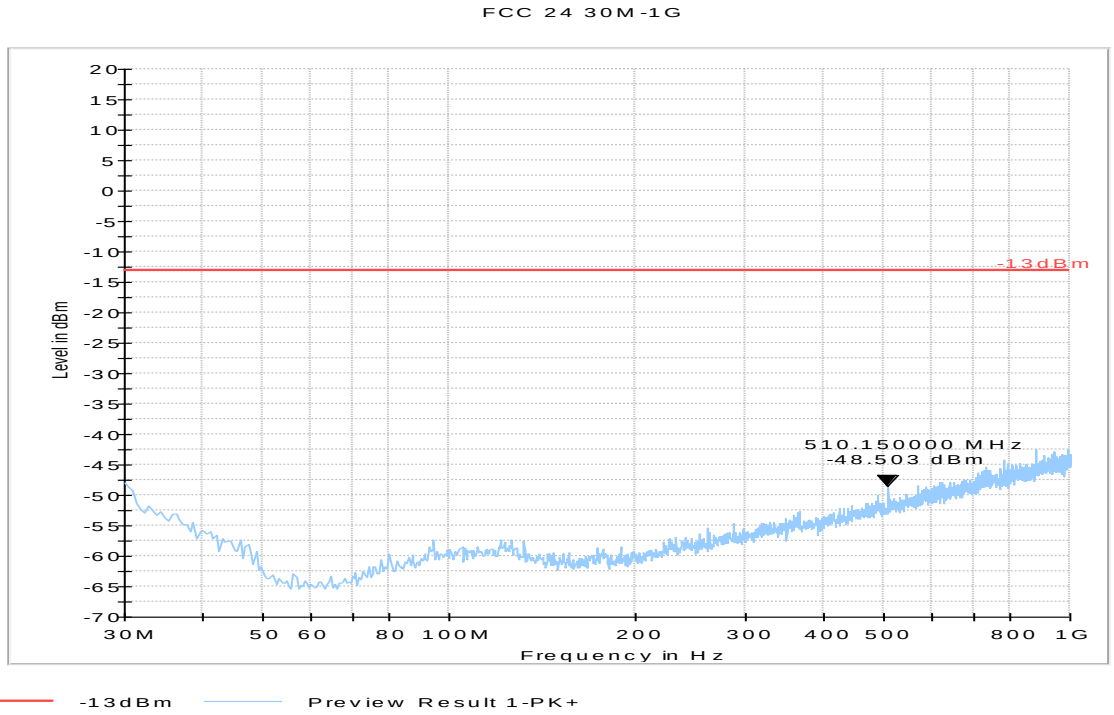
Test results – 30 MHz – 1GHz –High Channel (UMTS 1900)



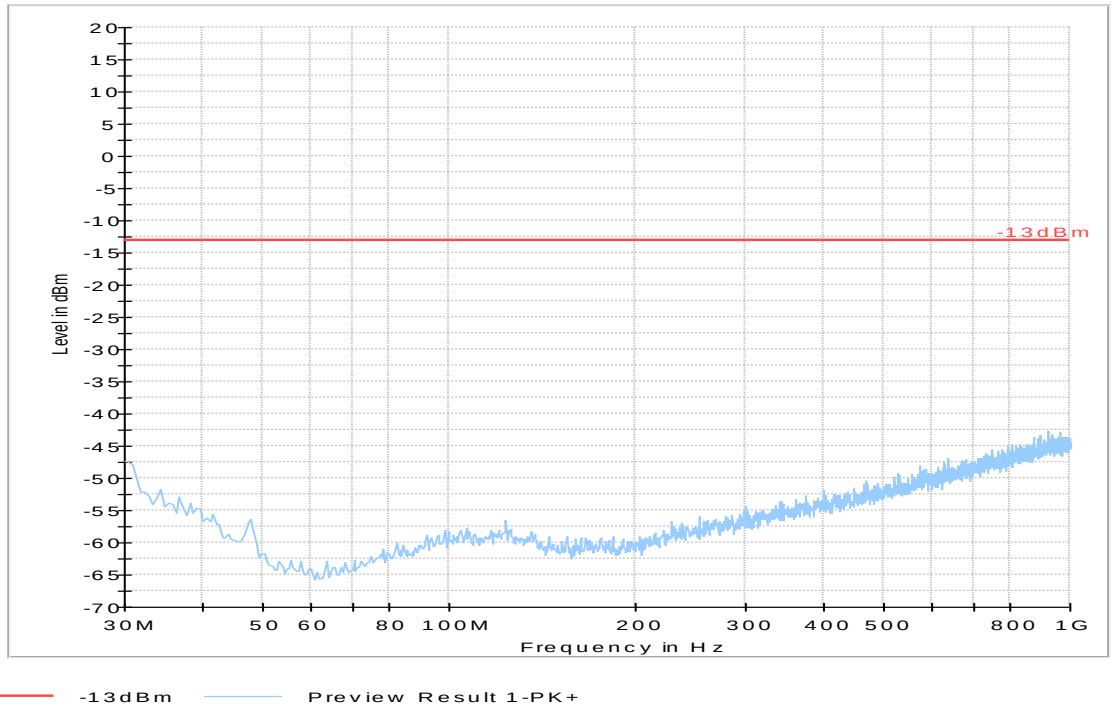
Test results – 1GHz – 3GHz –Low Channel (UMTS 1900)



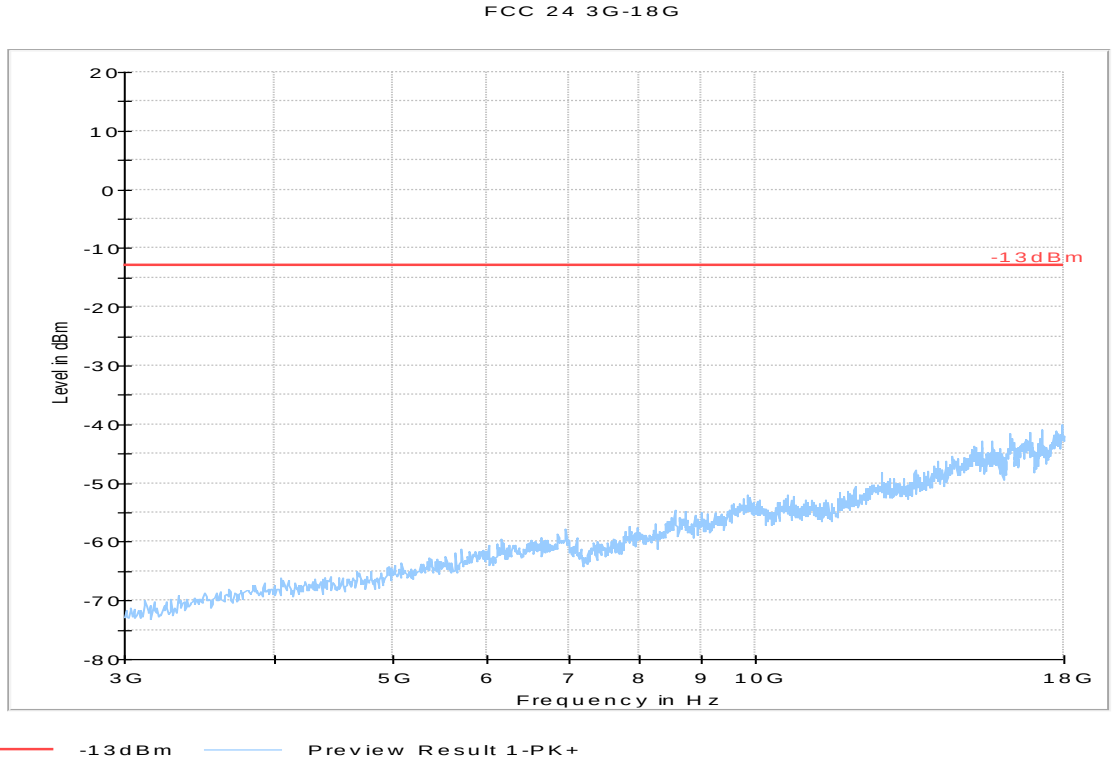
Test results – 1GHz – 3GHz –Mid Channel (UMTS 1900)



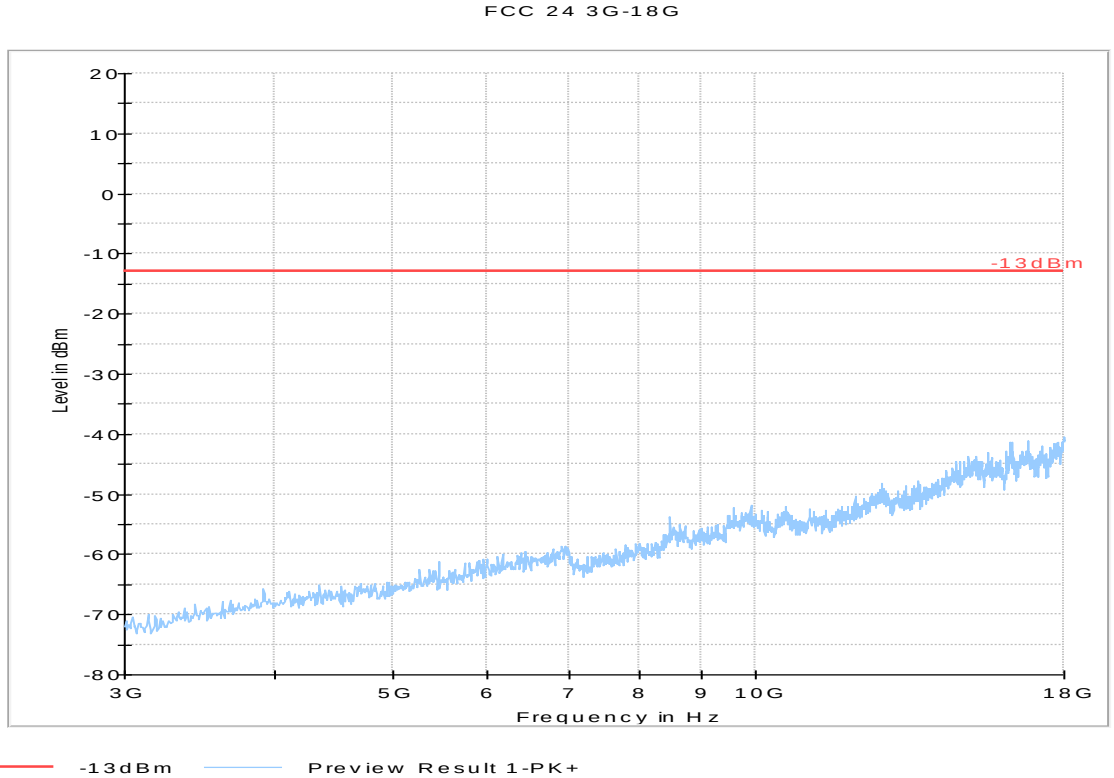
Test results – 1GHz – 3GHz –High Channel (UMTS 1900)



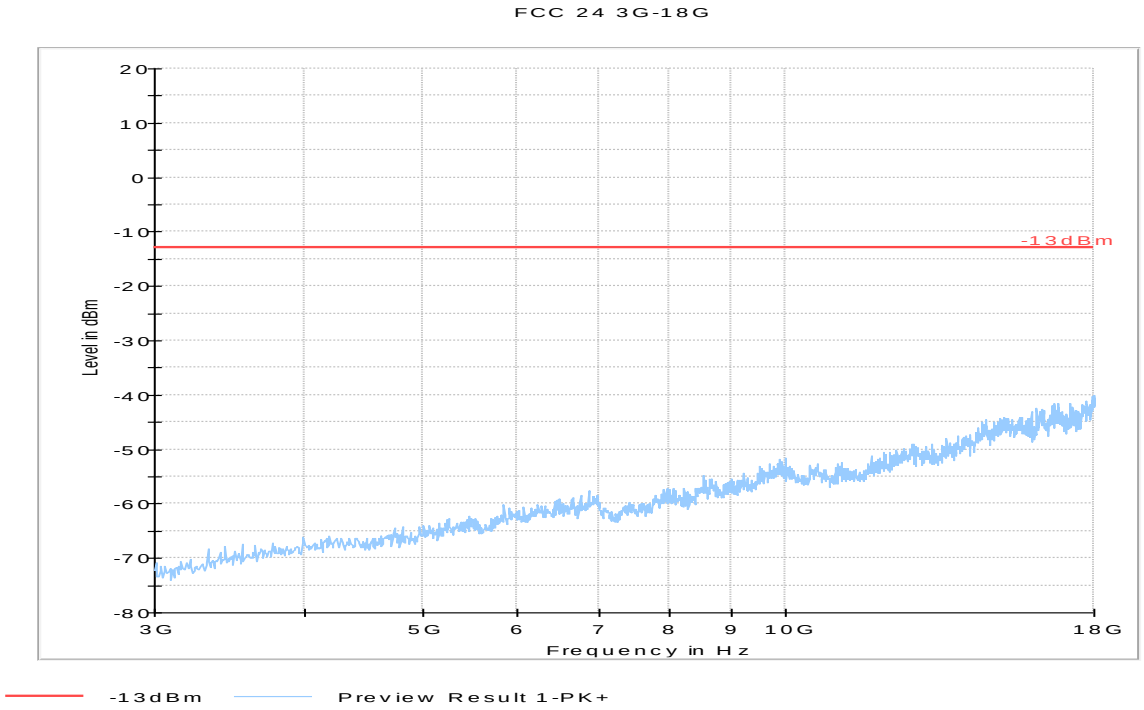
Test results – 3GHz – 18GHz –Low Channel (UMTS 1900)



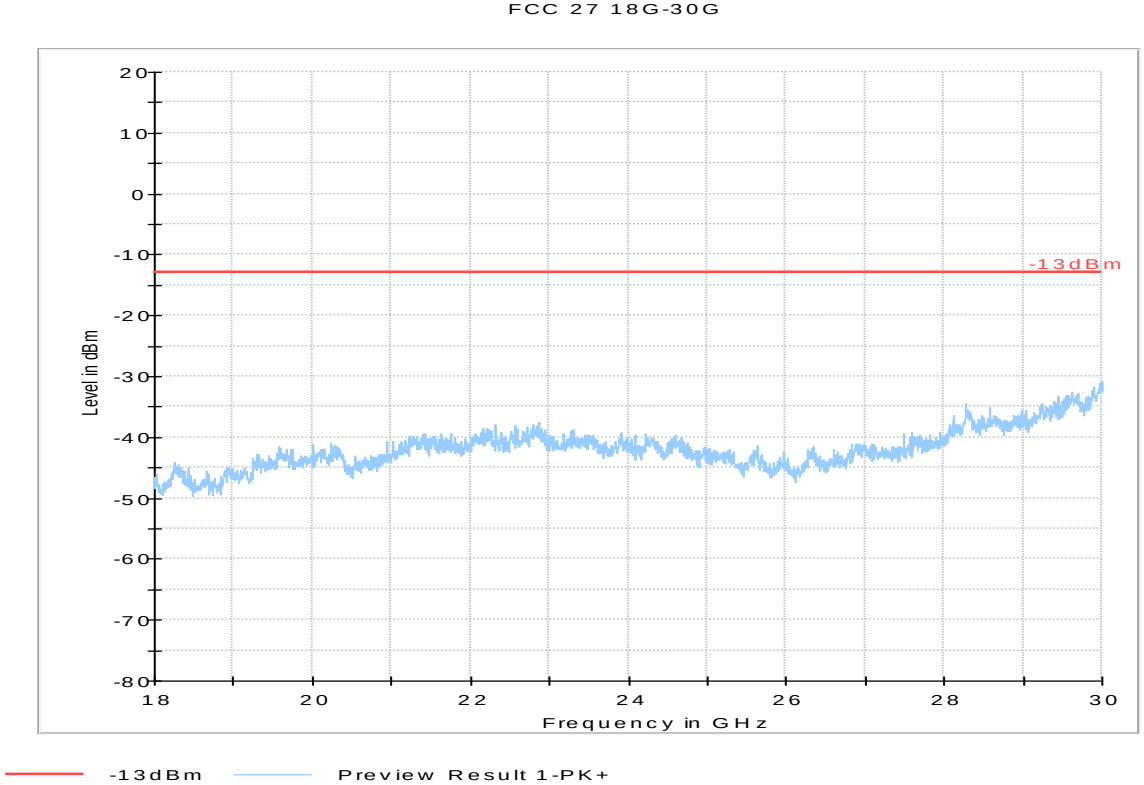
Test results – 3GHz – 18GHz –Mid Channel (UMTS 1900)



Test results – 3GHz – 18GHz –High Channel (UMTS 1900)



Test results – 18GHz – 30GHz –Mid Channel (UMTS 1900))



7 Test Equipment and Ancillaries used for tests

Equipment Name	Manufacturer	Type/Model	Serial No.	Cal Date	Cal Interval	Next cal date
3m Semi- Anechoic Chamber:						
Spectrum Analyzer	Rohde und Schwarz	FSU 26	200302	6/2013	3 years	6/2016
Receiver	Rohde und Schwarz	ESR3	101663	2/2013	3 years	2/2016
LISN	Rohde und Schwarz	ESV 216	101129	1/2013	3 years	1/2016
Radiocommunication Tester	Rohde and Schwarz	CMU 200	121672	7/2013	3 years	7/2015
Log Periodic Antenna	Rohde and Schwarz	HL 050	100515	4/2013	4 year	4/2017
Ultralog Antenna	Rohde and Schwarz	HL 562	100495	2/2012	4 year	2/2016
Open Switch Control Unit	Rohde and Schwarz	OPS 130	10085	n/a		
Extention Unit Open Switch Control Unit	Rohde and Schwarz	OSP 150	10086	n/a		
Turn Table TT	Maturo	1.5 SI	TT 1.5SI/204/60709 10	n/a		
Compact antenna Mast	Maturo	CAM 4.0-P	CAM4.0-P/067/6000910	n/a		
Multiple Control Unit	Maturo	MCU	2140910	n/a		
Pre-Amplifier	Rohde and Schwarz	TS-PR 18	100072	Part of the system calibration		
High Pass Filter	Mini-Circuits	SHP-1200+	RUU11201224	Part of the system calibration		
High Pass Filter	Wainwright Instr.	WHKX 3.0/18	109	Part of the system calibration		

Calibration status valid at the time of testing.
Equipment used meets the measurement uncertainty requirements as required per applicable standards for 95% confidence levels.
Calibration due dates, unless defined specifically, falls on the last day of the month.
Items indicated “N/A” for cal status either do not specifically require calibration or is internally characterized before use.
