1. Introduction

The PA.26B is an SMT LTE 4G antenna designed for direct SMT mount on the device PCB. It provides highest efficiency in the smallest form SMT form factor, 35*5*6mm. Due to its rectangular shape and compact size the PA.26A is very easy to integrate and can be mounted directly on the edge of the PCB. Matching is accomplished using a pi network. Using SMT (On-Board) antennas saves on labor, cable, and connector costs. SMT antennas also lead to higher integration yield rates, higher transmit power and higher sensitivity.

The PA.26B operates at all common 4G/3G/2G LTE bands; 698MHz to 960MHz, 1710MHz to 2700MHz.

Typical applications:

- Telematics Control Unit (TCU)
- Intelligent Transport Systems
- Wireless LTE M2M Devices
- High Definition Video Broadcast Systems
- First Responder and Emergency Services
- HD Video over LTE
- Internet of Things (IoT)
- Medical Devices

Care should be taken to follow layout instructions and place antenna on the edge of board with adequate clearance to metal. Also minimum ground-plane requirements must be met to achieve targeted efficiencies. Taoglas provides optimization services for matching, and active TRP, TIS and RSE testing.
