Subject: Label Location Justification regarding application for certification of FCC ID: 2ACL9WS600A

Due to the fact that the available label area on the non-removable exterior parts of this device is limited because it is relatively small and has many contoured surfaces, keypads, and LCD display, and that it will be mounted outdoors with direct exposure to the elements, the label will be placed on the circuit board containing the user terminal strip inside a hinged door with a finger latch.

This unit requires external power to be supplied for operation, which must be connected to the terminal strip just above the warning label which will be readily viewable per FCC Rule 2.925 (d) by the user before operation and at the time of purchase.

Sincerely,

A handwritten signature in black ink, appearing to read "Stephen Judd", written over a horizontal line.

Stephen Judd
