1. ATTESTATION OF TEST RESULTS

COMPANY NAME:	CREE INC. 4600 SILICON DR. DURHAM, NC 27709 USA
EUT DESCRIPTION:	Commissioning Tool with Transceiver for Lighting System.
MODEL:	CCT-CWC-1
SERIAL NUMBER:	Non-serialized.
DATE TESTED:	2014-02-04 through 2014-02-07, 2014-02-11, 2014-03-03 through 2014-03-05

APPLICABLE STANDARDS					
STANDARD	TEST RESULTS				
CFR 47 Part 15 Subpart C	Pass				
INDUSTRY CANADA RSS-210 Issue 8 Annex 8	Pass				
INDUSTRY CANADA RSS-GEN Issue 3	Pass				

UL LLC tested the above equipment in accordance with the requirements set forth in the above standards. All indications of Pass/Fail in this report are opinions expressed by UL LLC based on interpretations and/or observations of test results. Measurement Uncertainties were not taken into account and are published for informational purposes only. The test results show that the equipment tested is capable of demonstrating compliance with the requirements as documented in this report.

Note: The results documented in this report apply only to the tested sample, under the conditions and modes of operation as described herein. This document may not be altered or revised in any way unless done so by UL LLC and all revisions are duly noted in the revisions section. Any alteration of this document not carried out by UL LLC will constitute fraud and shall nullify the document. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, any agency of the Federal Government, or any agency of any government.

Approved & Released For UL LLC By:

Mike Antola EMC Project Lead UL – Consumer Technology Division

Prepared By:

Jeff Moser EMC Program Manager UL – Consumer Technology Division

Page 4 of 64

2. TEST METHODOLOGY

The tests documented in this report were performed in accordance with ANSI C63.4-2003, FCC CFR 47 Part 2, FCC CFR 47 Part 15, RSS-GEN Issue 3, and RSS-210 Issue 8.

3. FACILITIES AND ACCREDITATION

The test sites and measurement facilities used to collect data are located at 12 Laboratory Dr., Research Triangle Park, NC 27709, USA.

UL LLC (RTP) is accredited by NVLAP, Laboratory Code 200246-0. The full scope of accreditation can be viewed at <u>http://ts.nist.gov/standards/scopes/2002460.htm</u>.

4. CALIBRATION AND UNCERTAINTY

4.1. MEASURING INSTRUMENT CALIBRATION

The measuring equipment utilized to perform the tests documented in this report has been calibrated in accordance with the manufacturer's recommendations, and is traceable to recognized national standards.

4.2. SAMPLE CALCULATION

Where relevant, the following sample calculation is provided:

Field Strength (dBuV/m) = Measured Voltage (dBuV) + Antenna Factor (dB/m) + Cable Loss (dB) – Preamp Gain (dB) 36.5 dBuV + 18.7 dB/m + 0.6 dB – 26.9 dB = 28.9 dBuV/m

4.3. MEASUREMENT UNCERTAINTY

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the apparatus:

PARAMETER	UNCERTAINTY
Conducted Disturbance, 0.15 to 30 MHz	+/- 2.5 dB
Radiated Disturbance, 30 to 1000 MHz	+/- 3.4 dB

Uncertainty figures are valid to a confidence level of 95%.

Page 5 of 64

5. EQUIPMENT UNDER TEST

5.1. DESCRIPTION OF EUT

The Commissioning Tool, p/n CCT-CWC-1 is a 2.4 GHz DSSS transceiver used with light fixtures. The Commissioning Tool contains an O-QPSK modulation and a 250 kbps data rate. The Commissioning Tool receives signals from other devices to control the fixture.

The radio module is manufactured by Cree Inc.

5.2. MAXIMUM OUTPUT POWER

The transmitter has a maximum peak conducted output power as follows:

Frequency Range	Mode	Output Power	Output Power
(MHz)		(dBm)	(mW)
2405 - 2480	O-QPSK	4.19	2.62

5.3. DESCRIPTION OF AVAILABLE ANTENNAS

The radio utilizes a Monopole, PCB-Trace antenna, with a maximum gain of 1.4 dBi.

5.4. SOFTWARE AND FIRMWARE

Config Tool – CCT-CWC-1

RFR2_MOD_11.hex RFR2_MOD_18.hex RFR2_MOD_22.hex RFR2_NO_RADIO.elf XMEGA_STANDARD.elf XMEGA_STRESS.hex

All firmware has the following parameters:

- Channel 11 and 18 have transmit power of 3.5dBm, channel 26 has a transmit power of 1.2dBm.
- Channel 11 and 18 have no transmit filter, channel 26 uses a transmit filter.
- All firmware files labelled 128RFR2_MOD_XX.hex are radio tests for the ATMEGA128RFR2, where XX is the channel being constantly transmitted on.
- All firmware files labelled RFR2_MOD_XX.hex are the equivalent for the ATMEGA256RFR2.
- The 128RFR2_NO_RADIO and RFR2_NO_RADIO files put the ATMEGAXXXRFR2 into a non-tranmitting, idle state.
- The XMEGA_STRESS.hex file is the stress test that puts the XMEGA into a maximal power usage state.
- The XMEGA.elf file is the standard conditions XMEGA file for testing the CT.

Page 6 of 64

5.5. WORST-CASE CONFIGURATION AND MODE

The fundamental of the EUT was investigated in three orthogonal orientations X,Y,Z, it was determined that the Y orientation (Device on its side.) was worst-case orientation. Therefore, all final radiated testing was performed with the EUT in Y orientation. To see what affects, if any, attaching the device to a laptop PC via its USB cable was also investigated. The presence of the USB cable and laptop PC had negligible effect at the fundamental emission. In fact, the stand-alone configuration's fundamental emission level was slightly higher than with the device attached to the laptop PC. Therefore, the stand-alone configuration was used throughout FCC Part 15, Subpart C radiated emissions testing.

Radiated-emission testing in the 30-1000MHz range and power line conducted-emission testing were performed with the EUT set to transmit at the channel with highest output power as worst-case scenario.

2	AC	1	-	Unshielded	1	1m for PC adapter; 0m for wall- wart.		
3	DC	1	-	Unshielded	1.78	Laptop PC power adapter.		

TEST SETUP

Different Commissioning Tool Modules were provided. 3 units were provided for Radiated Emissions testing (Low Channel, Mid Channel and High Channel) and 3 units were provided for Conducted Port tests (Low Channel, Mid-Channel and High-Channel).

Note, the Low and Mid Channel's output power was set for 3.5dBm during testing. The High Channel output power was set for 1.2 dBm during testing.

8. ANTENNA PORT TEST RESULTS

8.1. O-QPSK (DSSS) MODE IN THE 2.4 GHz BAND

8.1.1.6 dB BANDWIDTH

LIMITS

FCC §15.247 (a) (2)

IC RSS-210 A8.2 (a)

The minimum 6 dB bandwidth shall be at least 500 kHz.

TEST PROCEDURE

The transmitter output is connected to a spectrum analyzer. The RBW is set to 100 kHz and the VBW is set to 300 kHz. The sweep time is coupled.

RESULTS

Channel	Frequency	6 dB Bandwidth	Minimum Limit
	(MHz)	(MHz)	(MHz)
Low	2405	1.589	0.5
Middle	2440	1.586	0.5
High	2480	1.574	0.5

Page 16 of 64

6 dB BANDWIDTH

Page 18 of 64

Page 19 of 64

8.1.2. 99% BANDWIDTH

LIMITS

None; for reporting purposes only.

TEST PROCEDURE

The transmitter output is connected to the spectrum analyzer. The RBW is set to 1% to 3% of the 99 % bandwidth. The VBW is set to 3 times the RBW. The sweep time is coupled. The spectrum analyzer internal 99% bandwidth function is utilized.

RESULTS

Channel	Frequency	99% Bandwidth
	(MHz)	(MHz)
Low	2405	2.234
Middle	2440	2.222
High	2480	2.218

99% BANDWIDTH

Page 21 of 64

Page 22 of 64

Page 23 of 64

8.1.3. OUTPUT POWER

LIMITS

FCC §15.247 (b)

IC RSS-210 A8.4

The maximum antenna gain is less than or equal to 6 dBi, therefore the limit is 30 dBm.

TEST PROCEDURE

The transmitter output is connected to a spectrum analyzer the analyzer bandwidth is set to a value greater than the 6dB bandwidth of the EUT.

RESULTS

Channel	Frequency	Output	Limit	Margin
		Power		
	(MHz)	(dBm)	(dBm)	(dB)
Low	2405	3.99	30	-26.01
Middle	2440	4.19	30	-25.82
High	2480	1.36	30	-28.64

OUTPUT POWER

Page 26 of 64

Page 27 of 64

8.1.4. AVERAGE POWER

LIMITS

None; for reporting purposes only.

TEST PROCEDURE

The transmitter output is connected to a power meter.

RESULTS

The cable assembly insertion loss of 10.7dB (including 10 dB pad and 0.7 dB cable) for the low and middle channels and 10.4dB (including 10 dB pad and 0.4 dB cable) for the high channel was entered as an offset in the power meter to allow for direct reading of power.

Channel	Frequency	Power
	(MHz)	(dBm)
Low	2405	3.98
Middle	2440	4.18
High	2480	1.34

Page 28 of 64

8.1.5. POWER SPECTRAL DENSITY

<u>LIMITS</u>

FCC §15.247 (e)

IC RSS-210 A8.2 (b)

The power spectral density conducted from the transmitter to the antenna shall not be greater than 8 dBm in any 3 kHz band during any time interval of continuous transmission.

TEST PROCEDURE

Output power was measured based on the use of a peak measurement in accordance with section 10.2 of KDB 558074 D01 v03r01, Section 10.2.

RESULTS

Channel	Frequency	PPSD	Limit	Margin
	(MHz)	(dBm)	(dBm)	(dB)
Low	2405	-10.08	8	-18.08
Middle	2440	-10.78	8	-18.78
High	2480	-13.83	8	-21.83

POWER SPECTRAL DENSITY

Page 30 of 64

Page 31 of 64

Page 32 of 64

8.1.6. CONDUCTED SPURIOUS EMISSIONS

<u>LIMITS</u>

FCC §15.247 (d)

IC RSS-210 A8.5

Output power was measured based on the use of a peak measurement, therefore the required attenuation is 20 dB.

TEST PROCEDURE

The transmitter output is connected to a spectrum analyzer. The resolution bandwidth is set to 100 kHz. The video bandwidth is set to 300 kHz.

The spectrum from 30 MHz to 26 GHz is investigated with the transmitter set to the lowest, middle, and highest channels.

Page 33 of 64

RESULTS

9. RADIATED TEST RESULTS

9.1. LIMITS AND PROCEDURE

LIMITS

FCC §15.205 and §15.209

IC RSS-210 Clause 2.6 (Transmitter)

IC RSS-GEN Clause 6 (Receiver)

Frequency Range (MHz)	Field Strength Limit (uV/m) at 3 m	Field Strength Limit (dBuV/m) at 3 m
30 - 88	100	40
88 - 216	150	43.5
216 - 960	200	46
Above 960	500	54

TEST PROCEDURE

The EUT is placed on a non-conducting table 80 cm above the ground plane. The antenna to EUT distance is 3 meters. The EUT is configured in accordance with ANSI C63.4. The EUT is set to transmit in a continuous mode.

For measurements between 30 MHz and 1 GHz the resolution bandwidth is set to 120 kHz for peak detection measurements or 120 kHz for quasi-peak detection measurements. Peak detection is used unless otherwise noted as quasi-peak.

For measurements above 1 GHz the resolution bandwidth is set to 1 MHz; the video bandwidth is set to 1 MHz for peak measurements and as applicable for average measurements.

The spectrum from 30 MHz to 26 GHz is investigated with the transmitter set to the lowest, middle, and highest channels in the 2.4 GHz band.

The frequency range of interest is monitored at a fixed antenna height and EUT azimuth. The EUT is rotated through 360 degrees to maximize emissions received. The antenna is scanned from 1 to 4 meters above the ground plane to further maximize the emission. Measurements are made with the antenna polarized in both the vertical and the horizontal positions.

For measurements below 30 MHz loop antennas were used per FCC requirements, and measurement equipment settings test method were consistent with ANSI C63.4.

9.3. WORST-CASE BELOW 1 GHz

SPURIOUS EMISSIONS BELOW 30 MHz (WORST-CASE CONFIGURATION)

Note: All measurements were made at a test distance of 3 m. The limits in the plots and tabular data are the FCC/IC limits extrapolated from the specification distance (300 m from 9-490 kHz and 30 m from 490 kHz – 30 MHz) to the measurement distance to clearly show the relative levels of fundamental and spurious emissions and demonstrate compliance with the requirement that the level of any spurious emissions be below the level of the intentionally transmitted signal. The extrapolation factor for the limits were 40*Log (specification distance / test distance).
