Smart Phone

#### Messaging

Tap the Message icon to send an SMS or MMS to other mobile phone users. Type a name or phone number in the "TO" field or select from your contacts. Type your message, then tap Send. To Send photos or video, tap "+" button.

#### Text Typing

Mobile phone corrects and suggests words as you type. So if you tap a wrong letter, just keep typing. To accept the suggested word, tap the space bar. Or touch and hold to cut, copy/paste.

#### Notification

When you receive a notification, it appears briefly at the top of the screen without interrupting what you're doing. Ignore the notification or tap it to address it right away. To see summary of your recent Notifications, swipe down from the top of any screen.

#### Camera

Tap the Camera icon on the Home screen. Adjust focus and exposure by tapping anyone or anything on the screen. To take a picture, tap the Camera button. Tap option to select the panorama setting. To record video, click to start Video recording then tap the record button.

#### Photo

Go to Gallery to see your pictures. Flick right or left to move between images. Double tap or pinch to zoom. Tap once to bring up on screen controls. You can edit or enhance a photo, share it via E-Mail, Message, Facebook and more.

#### Map

To see where you are on a map, tap location button. A blue dot appears at your current position.

Use two finger to rotate the map, or pinch to zoom. To tilt the map, drag finger up or down. Find place around you by typing words like "pizza" in the search field. Tap the Route button to start turn by turn navigation.

#### Google Play

Tap the Google Play™ icon to browse apps in categories, like game, travel, social networking, and more.

To purchase and download an app directly to your mobile phone, tap Buy Now. Many apps are even free.

Smart Phone

## GENERAL INFO

A85 is a multi SIM phone that encloses features, such as Android™ 8.1 Oreo™ (Go edition), Wi-Fi, Quad Core Processor 1.3 GHz, 13.0MP Camera, etc.

Android, Google Play and other marks are trademarks of Google LLC. Oreo is a trademark of Mondelez International, Inc. group.

## DEVICE OVERVIEW

#### Position of Keys

- |                  |                        |
|------------------|------------------------|
| 1. Sensor        | 8. Back Camera         |
| 2. Front Camera  | 9. LED Flash Light     |
| 3. Earpiece      | 10. Battery Cover      |
| 4. Touch Screen  | 11. Speaker            |
| 5. Power Button  | 12. 3.5mm Headset Jack |
| 6. Volume Button |                        |
| 7. USB Port      |                        |

## GETTING STARTED

### Installing Cards and Battery

1. If the device is on, press and hold the Power Key and select Power Off → OK to turn it off.
2. Remove the battery cover.

3. Insert SIM Card / Micro SD Card

4. Insert the battery.

5. Replace the battery cover.

## Basic Operation

### Basic Button

Turn on your mobile phone by pressing and holding the Power key button for a few second.

To turn off your mobile phone, press and hold the Power key button for a few second until it shows you 3 options, and press Power off.

To turn off the screen but still receive calls, press Power key once. Press the Home key at any time to return to Home screen. Press and hold the home button to switch between recently used apps.

### Phone

Tap a phone number in Contact, Favorites, an email, a text message, or almost anywhere in mobile phone to make a call. Or open Phone app and tap the Keypad button to dial manually. Press the Volume button or power key to silence an incoming call or slide the Phone button to reply with a text message. To answer a call while using the mobile headset, press the button On headset. Press it again to end your call.

### Video Call

Select someone from your contacts and tap the video call button to start a video call available video calls user.

**FCC Statement**

1. This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference.

(2) This device must accept any interference received, including interference that may cause undesired operation.

2. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

**NOTE:**

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

Reorient or relocate the receiving antenna.

Increase the separation between the equipment and receiver.

Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

Consult the dealer or an experienced radio/TV technician for help.

**SAR Information Statement**

Your wireless phone is a radio transmitter and receiver. It is designed and manufactured not to exceed the emission limits

for exposure to radiofrequency (RF) energy set by the Federal Communications Commission of the U.S. Government. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons, regardless of age and health. The exposure standard for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6 W/kg. \* Tests for SAR are conducted with the phone transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the phone while operating can be well below the maximum value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output. Before a phone model is available for sale to the public, it must be tested and certified to the FCC that it does not exceed the limit established by the government adopted requirement for safe exposure. The tests are performed in positions and locations (e.g., at the ear and worn on the body) as required by the FCC for each model. The highest SAR value for this model phone when tested for use at the ear is **0.294W/Kg** and when worn on the body, as described in this user guide, is **0.508W/Kg**(Body-worn measurements differ among phone models, depending upon available accessories and FCC requirements). The maximum scaled SAR in hotspot mode is 0.508W/Kg. While there may be differences between the SAR levels of various phones and at various positions, they all meet the government requirement for safe exposure. The FCC has granted an Equipment Authorization for this model phone with all reported SAR levels evaluated as in compliance with the FCC RFexposure guidelines. SAR information on this model phone is on file with the FCC and can be found under the Display Grant section of <http://www.fcc.gov/oet/fccid> after searching on FCC ID:2ACQKTELCO018 Additional information on Specific Absorption Rates (SAR) can be found on the Cellular Telecommunications Industry Association (CTIA) web-site at <http://www.wow-com.com>. \* In the United States and Canada,

the SAR limit for mobile phones used by the public is 1.6 watts/kg (W/kg) averaged over one gram of tissue. The standard incorporates a sub-stancial margin of safety to give additional protection for the public and to account for any variations in measurements.

### **Body-worn Operation**

This device was tested for typical body-worn operations. To comply with RF exposure requirements, a minimum separation distance

of 10mm must be maintained between the user's body and the handset, including the antenna. Third-party belt-clips, holsters,

and similar accessories used by this device should not contain any metallic components. Body-worn accessories that do not meet these requirements may not comply with RF exposure requirements and should be avoided. Use only the supplied or an approved antenna.
