Measurement Uncertainty

MEASUREMENT	FREQUENCY	UNCERTAINTY	
	30MHz to 200MHz	±5.2dB	
	200MHz to 1GHz	±6.1dB	
Radiated emissions	1GHz to 8.2GHz	±4.9dB	
	8.2GHZ to 12.4GHz	±4.3dB	
	12.4GHz to 18GHz	±4.6dB	

Remarks:-

N/A : Not Applicable or Not Available

Measurement uncertainty is calculated in accordance with CISPR 16-4-2.

The statement of compliance is based on a 95% coverage probability for the expanded uncertainty of the measurement result using a coverage factor k = 2.

Compliance is based on the results of the compliance measurement, not taking into account measurement instrumentation uncertainty.

Disclaimer Note: Technical information stated	on this table are provided by client. All tests were conducted				
base on the technical information provided above.					

Description of EUT Operation:

The Equipment Under Test (EUT) is a **INTERNATIONAL TOY** of Remote Control Transmitter. It is a 1 switch and 7 buttons transmitter and operating at 2419MHz to 2474MHz. The lowest, middle and highest frequencies were tested and the results are shown in the report. The EUT transmit while buttons is being pressed or sticks are being pushed or pulled, Modulation by IC, and type is GFSK.

There are total 6 channels and below is the frequency list :

			,		
2419	2425	2445	2450	2470	2474

The transmitter has different control:

- 1. ON/OFF Switch power control
- 2. Move Forward button forward control
- 3. Move backward button backward control
- 4. Turn left button leftward control
- 5. Turn Right button– rightward control
- 6. Head Left button
- 7. Head Right button

Antenna Requirement (Section 15.203)

The EUT is use of a permanently antenna. It is soldered on the PCB. The antenna is not replaceable or user serviceable. The requirements of S15.203 are met. There are no deviations or exceptions to the specifications.

This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Our report includes all of the tests requested by you and the results thereof based upon the information that you provided to us. Measurement uncertainty is only provided upon request for accretidet tests. You have 60 days from date of issuance of this report to notify us of any material error or omission caused by our negligence or if you require measurement uncertainty; provided, however, that such notice shall be in writing and shall specifically address the issue you wish to raise. A failure to raise such issue within the prescribed time shall constitute you unqualified acceptance of the completeness of this report, the tests conducted and the correctnees of the report contents.

RF EXPOSURE EVALUATION

- a) For 100 MHz to 6 GHz and test separation distances \leq 50 mm, the 1-g and 10-g SAR test exclusion thresholds are determined by the following:
 - [(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] $\cdot \left[\sqrt{f(GHz)}\right] \le 3.0$ for 1-g SAR, and $\le \overline{7.5}$ for 10-g extremity SAR, 30 where
 - f(GHz) is the RF channel transmit frequency in GHz
 - Power and distance are rounded to the nearest mW and mm before calculation
 - The result is rounded to one decimal place for comparison
 - The values 3.0 and 7.5 are referred to as numeric thresholds in step b) below

The test exclusions are applicable only when the minimum test separation distance is ≤ 50 mm, and for transmission frequencies between 100 MHz and 6 GHz. When the minimum test separation distance is < 5 mm, a distance of 5 mm according to 4.1 f) is applied to determine SÂR test exclusion.

- b) For 100 MHz to 6 GHz and test separation distances > 50 mm, the 1-g and 10-g SAR test exclusion thresholds are determined by the following (also illustrated in Appendix B):
 - 1) {[Power allowed at numeric threshold for 50 mm in step a)] + [(test separation distance -50mm)·(f(MHz)/150)]} mW, for 100 MHz to 1500 MHz
- 2) {[Power allowed at numeric threshold for 50 mm in step a)] + [(test separation distance 50 mm)·10]} mW, for > 1500 MHz and ≤ 6 GHz c) For frequencies below 100 MHz, the following may be considered for SAR test exclusion (also
- illustrated in Appendix C):
 - 1) For test separation distances > 50 mm and < 200 mm, the power threshold at the corresponding test separation distance at 100 MHz in step b) is multiplied by [1 + $\log(100/f(MHz))$]
 - 2) For test separation distances \leq 50 mm, the power threshold determined by the equation in c) 1) for 50 mm and 100 MHz is multiplied by $\frac{1}{2}$
 - 3) SAR measurement procedures are not established below 100 MHz.

CLASSIFICATION

The antenna of this product under normal use condition, is less than 20 cm away from the body of the user. So, this device is classified as Portable device.

BUREAU VERITAS HONG KONG LIMITED -Kowloon Bay Office 1/F Pacific Trade Centre, 2 Kai Hing Road, Kowloon Bay, Kowloon, HONG KONG Tel: +852 2331 0888 Fax: +852 2331 0889 www.cps.bureauveritas.com

This report is governed by, and incorporates by reference, CPS Conditions of Service as posted at the date of issuance of this report at http://www.bureauveritas.com/home/about-us/our-business/cps/about-us/terms-conditions/and is intended for your exclusive use. Any copying or replication of this report to or for any other person or entity, or use of our name or trademark, is permitted only with our prior written permission. This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Our report includes all of the tests requested by you and the results thereof based upon the information that you provided to us. Measurement uncertainty is only provided upon request for accredited tests. You have 60 days from date of issuance of this report to notify us of any material error or omission caused by our negligence or if you require measurement uncertainty; provided, however, that such notice shall be in writing and shall specifically address the issue you wish to raise. A failure to raise such issue within the prescribed time shall constitute you unqualified acceptance of the completeness of this report, the tests conducted and the correctness of the report contents.

SAR test exclusion threshold

Frequency Band (MHz)	Maximum source- based time averaged conducted output power (dBm)	Tolerance (dBm)	Minimum separation distance (mm)	Result from (a)	Limit for 1-g SAR	Limit for 10-g extremity SAR
2419 - 2474	-2.1	1	5	0.2	3.0	7.5

Therefore this device is not required SAR evaluation for general population exposure conditions since the SAR Test Exclusion Threshold condition is satisfied.
