Letter for Model Differences

Models: NJR4266F3C1, NJR4266F3C2
FCC ID: 2ACUJR4266F3C
IC: 22589-R4266F3C

The difference between the models listed here above is the following:

1. Two types of wired interface for control and communication with a host.
 - 1) UART at the model NJR4266F3C1
 - 2) Digital Output / Analog Range Setting at the model NJR4266F3C2

Desired type of the interface can be set by the specific firmware into the MCU of the module. End-user(s) **cannot** change this type setting.

Other than the above mentioned difference, these models are **electrically identical**.

For further details, refer to the submitted exhibits, such as Operational Description, Block Diagram, Circuit Diagrams, Parts List, External Photographs and Internal Photographs.

Sincerely,

By:
