1.0 DECLARATION

1.1 FCC Part 15C and Industry Canada Statement

The Equipment Under Test (EUT), as described and reported within this document, complies with the parts 15.209 and 15.249 of the CFR 47:2015 FCC rules in accordance with ANSI C63.10-2013. The EUT operates at a transmit frequency of 902.4MHz and complies with part 15C emission requirements. The EUT also complies with Industry Canada RSS-210 Issue 9.

Note: The EUT works in conjunction with other Avonwood products.

EUT:	ZoneSafe VibraTag Pedestrian (FCC)
Model:	ZST6687-FCC
Serial numbers:	32496
Sample build:	Production

2.2 Product Operation

The ZoneSafe VibraTag Pedestrian (FCC) has been designed for use with a Zonesafe control unit which reads microchips that are housed in the tags. The ZoneSafe system transmits a 125kHz signal which is detected by the tags when nearby, the detector which in turn respond by transmitting at 902.4MHz which is received by the ZoneSafe system.

2.3 Support Equipment

None.

2.4 Exerciser Program

3.0 MEASUREMENT PROCEDURE AND INSTRUMENTATION

3.1 EMI Site Address & Test Date

EMI Company Offices	Hursley EMC Services Ltd Trafalgar House, Trafalgar Close, Chandlers Ford, Hampshire
EMI Measurement Site	Hursley EMC Services Ltd Hursley Park, Winchester; FCC Registered UK Designation number: UK0006
Test Date	15 th November 2017 to 29 th November 2017
HEMCS References:	17R616

3.2 General Operating Conditions

Testing was performed according to the procedures in ANSI C63.10-2013. Final radiated testing was performed at a EUT to antenna distance of three metres (above 30 MHz).

Below 30 MHz the EUT was measured at an antenna distance of three and ten metres and the extrapolation factor calculated.

Instrumentation, including receiver and spectrum analyser bandwidth, comply with the requirements of ANSI C63.2:1996.

3.3 Environmental Ambient

Test Type	Temperature	Humidity	Atmospheric Pressure
Radiated	21.4 - 22 degrees Celsius	56 - 59% relative	1016.8 – 1023.5 millibars

3.4 Radiated Emissions

Initial Scan

A radiated profile scan was taken at a three metre distance on eight azimuths of the system under test in both vertical and horizontal polarities of the antenna in a semi-anechoic chamber. Instrumentation used in the chamber as below:

#ID	CP	Manufacturer	Type	Serial No	Description	Calibration due date
762	3	Schwarzbeck	VULB9162	129	30-7000MHz	07/04/2019

047	3	Rohde & Schwarz	HFH2-Z2	879021/22	Loop antenna (9kHz-30MHz)	01/06/2019

The data obtained from the profile scan was used as a guide for the final Open Area Test Site (OATS) measurements.

Final Measurements

The system under test was transferred to the OATS from the semi-anechoic chamber. The data obtained from the chamber profile-scan was used to guide the test engineer. Above 30 MHz, each emission from the transmitter was maximised by revolving the system on the turntable and moving the antennae in height and azimuth. Below 30 MHz the loop antenna was set at a height of 1m, the EUT was measured with the antenna in the vertical and horizontal polarity and each emission was maximised by revolving the system on the turntable. The EUT was tested in 3 orientations, the worst-case data is presented in this report. Test instrumentation used in the OAT's measurements was as follows:

#ID	CP	Manufacturer	Type	Serial No	Description	Calibration due date
762	3	Schwarzbeck	VULB9162	129	30-7000MHz	07/04/2019
762a	3	Schwarzbeck	DGA 9552N	0	6dB attenuator for #762	07/04/2019

047	3	Rohde & Schwarz	HFH2-Z2	879021/22	Loop antenna (9kHz-30MHz)	01/06/2019

CP = Interval period [year] prescribed for external calibrations

Note: 'Calibration due date' means that the instrument is certified with a UKAS or traceable calibration certificate.
 '**' denotes that the calibration, as defined by Hursley EMC Services quality system, remains valid whilst within four calendar months of the due date.

3.5 Conducted Emissions

N/A (Battery powered)

3.6 FCC – Radiated Emissions

A search was made of the frequency spectrum from 30MHz to 10 GHz and the measurements reported are the highest emissions relative to the ‘FCC CFR 47 Section 15.209 and 15.249 Limits’ at a measuring distance of three metres.

Between 110 and 490 kHz measurements were made using an average detector with a 200 Hz bandwidth.

4.7 99% Occupied Bandwidth (IC)

Section 4.6 of RSS-GEN

The output from the measuring antenna was fed into the input of the ESCI spectrum analyser/receiver. The bandwidth of the transmitter was measured with an ESCI receiver set to 99% Occupied Bandwidth with a sampling detector on max hold. The resolution bandwidth, span and video bandwidth are indicated on the occupied bandwidth plot (modulated) included with this report.

The bandwidth of the Transmitter was measured as 75.6 kHz.

4.8 20dB Occupied Bandwidth (FCC)

ANSI 63.10 6.9.3

The output from the measuring antenna was fed into the input of the ESCI spectrum analyser/receiver. The bandwidth of the transmitter was measured 20dB down either side of the peak. The ESCI analyser resolution bandwidth, span and video bandwidth are indicated on the occupied bandwidth plot (modulated) included with this report.

The bandwidth of the Transmitter signal was measured as 78.0 kHz.

Re: Accreditation of Hursley EMC Services Ltd.
Designation Number: UK0006

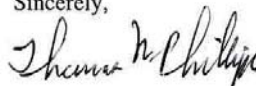

Dear Sir or Madam:

We have been notified by Department of Trade and Industry (DTI) that Hursley EMC Services Ltd. has been accredited as a Conformity Assessment Body (CAB).

At this time your organization is hereby designated to perform compliance testing on equipment subject to Declaration Of Conformity (DOC) and Certification under Parts 15 and 18 of the Commission's Rules.

This designation will expire upon expiration of the accreditation or notification of withdrawal of designation.

Sincerely,

Thomas Phillips
Electronics Engineer

Dear Sir/Madame:

The Bureau has received your application for the renewal of a 3/10m OATS. Be advised that the information received was satisfactory to Industry Canada. The following number(s) is now associated to the site(s) for which registration / renewal was sought (**7104A-1**). Please reference the appropriate site number in the body of test reports containing measurements performed on the site. In addition, please keep for your records the following information;

- The company address code associated to the site(s) located at the above address is: **7104A**

Furthermore, to obtain or renew a unique site number, the applicant shall demonstrate that the site has been accredited to ANSI C63.4-2003 or later. A scope of accreditation indicating the accreditation by a recognized accreditation body to ANSI C63.4-2003 or later shall be accepted. Please indicate in a letter the previous assigned site number if applicable and the type of site (example: 3 metre OATS or 3 metre chamber). If the test facility is not accredited to ANSI C63.4-2003 or later, the test facility shall submit test data demonstrating full compliance with the ANSI standard. The Bureau will evaluate the filing to determine if recognition shall be granted.

The frequency for re-validation of the test site and the information that is required to be filed or retained by the testing party shall comply with the requirements established by the accrediting organization. However, in all cases, test site re-validation shall occur on an interval not to exceed two years. There is no fee or form associated with an OATS filing. OATS submissions are encouraged to be submitted electronically to the Bureau using the following URL;
http://strategis.ic.gc.ca/epic/internet/inceb-bhst.nsf/en/h_tt00052e.html.

If you have any questions, you may contact the Bureau by e-mail at certification.bureau@ic.gc.ca Please reference our file and submission number above for all correspondence.

Yours sincerely,

Dalwinder Gill
