6 EUT description

Note: The following data in this clause is provided by the customer and represents his sole responsibility

6.1 General information

The EUT is the MutiHahul™ Terminal Unit, model MH-T265-CCP-PoE-MWB. The unit operates in 57-66 GHz regulated V-band. It communicates to the MH-N366-CCS-PoE-MWB TG Distribution node using the TG protocol, acting as an end point in a fully meshed MutiHahul TG topology.

The same hardware can be used as MH-B166-CCP-PoE-MWB which is a single sector TG Distribution node. The MH-B166 can be a low cost alternative to the four sector MH-N366.

- 7.1.2.6 The variable attenuator was disconnected from the Zero-Biased Detector.
- 7.1.2.7 Without changing any settings, the variable attenuator was connected to a power meter as shown in Figure 7.1.3.

*- The limit for 3 m test distance was calculated using the inverse square distance extrapolation factor as follows:

$$\text{Lim}_{S_2} = \text{Lim}_{S_1} + 40 \log (S_1/S_2),$$

where S_1 and S_2 – standard defined and test distance respectively in meters.

** - The limit decreases linearly with the logarithm of frequency.

Note: The above field strength limits applied from the lowest radio frequency generated in the device, without going below 9 kHz up to the tenth harmonic of the highest fundamental frequency but not exceeding 40 GHz for intentional radiators operated below 10 GHz and up to the fifth harmonic of the highest fundamental frequency but not exceeding 100 GHz for intentional radiators operated above 10 GHz.
