The report refers only to the sample tested and does not apply to the bulk. This report is issued in confidence to the client and it will be strictly treated as such by the Shanghai MORLAB Communication Technology Co., Ltd. It may not be reproduced rather in its entirety or in part and it may not be used for adverting. The client to whom the report is issued may, however, show or send it or a certified copy there of prepared by the Shanghai MORLAB Telecommunications Co., Ltd to his customer. Supplier or others persons directly concerned. Shanghai MORLAB Telecommunications Co., Ltd will not, without the consent of the client enter into any discussion of correspondence with any third party concerning the contents of the report. In the event of the improper use of the report, Shanghai MORLAB Telecommunications Co., Ltd reserves the rights to withdraw it and to adopt any other remedies which may be appropriate.

1. General Information

1.1 Applicant

Roadefend Vision Technology (Shanghai) Co.,Ltd Room 602~604, 1st Building, No. 65 Chifeng Road, Shanghai 200092, China

1.2 Manufacturer

Roadefend Vision Technology (Shanghai) Co.,Ltd Room 602~604, 1st Building, No. 65 Chifeng Road, Shanghai 200092, China

1.3 Description of EUT

| EUT Type: | Driver Fatigue Surveillance System | | | |
|-------------------|---|--|--|--|
| Brand Name: | Roadefend | | | |
| TradeName: | Roadefend | | | |
| ModelName: | RTD-300B | | | |
| Hardware Version: | RPHV2.0 | | | |
| Software Version: | RPHS2.0 | | | |
| Antenna type: | Monopole | | | |
| Antenna gain: | -1 dBi | | | |
| Frequency Range | GSM 850MHz: | | | |
| | Tx: 824.20-848.80 MHz (at intervals of 200kHz); | | | |
| | Rx: 869.20-893.80 MHz (at intervals of 200kHz) | | | |
| | GSM 1900MHz | | | |
| | Tx: 1850.20-1909.80 MHz (at intervals of 200kHz); | | | |
| | Rx: 1930.20-1989.80 MHz (at intervals of 200kHz) | | | |
| | GPRS/GSM mode with GMSK modulation | | | |
| Modulation Type | EGPRS mode with 8PSK modulation | | | |
| Power supply: | DC9-36V | | | |

NOTE:

(1) The transmitter (Tx) frequency arrangement of the cellular850MHz used by the EUT can be represented with the formula F(n)=824.2+0.2*(n-128), 128<=n<=251; the lowest, middle, highest channel numbers (ARFCHs) used and tested in this report are separately 128 (824.2MHz), 190(836.6MHz) and 251 (848.8MHz); the PCS 1900MHz used by the EUT can be represented with the formula F(n)=1850.2+0.2*(n-512), 512<=n<=810; the lowest, middle, highest channel numbers (ARFCHs) used and tested in this report are separately 512 (1850.2MHz), 661(1880.0MHz) and 810 (1909.8MHz).

(2) For a more detailed description, please refer toSpecification or User's Manual supplied by the applicant and/or manufacturer.

2. Facilities and Accreditations

2.1 Test Facility

ShanghaiMORLABCommunications Technology Co., Ltd. MORLABLaboratory is a third party testing organization accredited by China National Accreditation Service for Conformity Assessment (CNAS) according to ISO/IEC 17025. The accreditation certificate number is L6644. A 9*6*6(m) fully anechoic chamber was used for the radiated spurious emissions test.

2.2 Environmental Conditions

Ambient temperature: 20~25°C Relative humidity: 40~60% Atmosphere pressure: 86-102kPa

NOTE:

Equipments listed above have been calibrated and are in the period of validation.

3. Test Standards and Results

The objective of the report is to perform testing according to 47 CFR Part 2, Part 22and part 24 for the EUT FCC ID Certification:

| No. | Identity | ty Document Title | | | | | |
|-----|----------------|--|--|--|--|--|--|
| 1 | 47 CFR Part 2 | FREQUENCY ALLOCATIONS AND RADIO TREATY MATTERS; GENERAL RULES AND REGULATIONS | | | | | |
| 2 | 47 CFR Part 22 | PUBLIC MOBILE SERVICES | | | | | |
| 3 | 47 CFR Part 24 | PERSONAL COMMUNICATIONS SERVICES | | | | | |

Test detailed items/section required by FCC rules& IC rulesandresults are as below:

| No. | FCC Rules | Description | Result |
|-----|--------------------------------------|---------------------------------------|--------|
| 1 | 2.1046 | Conducted Output Power | PASS |
| 2 | 2.1049 | 99%/-26dBOccupied Bandwidth | PASS |
| 3 | 2.1055 22.355 24.235 | Frequency Stability | PASS |
| 4 | 2.1051 2.1057 22.917 24.238 | Conducted Out of Band Emissions | PASS |
| 5 | 2.1051 2.1057 22.917 24.238 | Band Edge | PASS |
| 6 | 22.913 24.232 | Transmitter Radiated Power (EIPR/ERP) | PASS |
| 7 | 2.1053 2.1057 22.917 24.238 | Radiated Out of Band Emissions | PASS |

NOTE: Measurement method according to TIA/EIA 603.D-2010

4. Test Result

4.1 Conducted Output Power

4.1.1 Requirement

According toFCCsection2.1046(a), for transmitters other than single sideband, independent sideband and controlled carrier radiotelephone, power output shall be measured at the RF output terminals when the transmitter is adjusted in accordance with the tune-up procedure to give the values of current and voltage on the circuit elements specified in FCC section 2.1033(c)(8).

4.1.2 Test Description

The EUT, which is powered by the DC Power Supply, is coupled to the Spectrum Analyzer (SA) and the System Simulator (SS) with Attenuators through the Power Splitter; the RF load attached to the EUT antenna terminal is 500hm; the path loss as the factoris calibrated to correct the reading. The EUT is commanded by the SS to operate at the maximum output power i.e. Power Control Level (PCL) = 5 and Power Class = 4. Acall is established between the EUT and the SS.

4.1.3 Test Result

Here the lowest, middle and highest channels are selected to perform testing to verify the conducted RF output power of the EUT.

| Band | Channel | Frequency (MHz) | Measured Output Power(dBm) | Limited (dBm) | Verdict |
|-----------------|---------|--------------------|----------------------------------|---------------|---------|
| COM | 128 | 824.2 | 31.45 | 38.5 | PASS |

| 1900MHZ | 810 | 1909.8 | 29.55 | 33.0 | PASS |
| GPRS 850MHz | 128 | 824.2 | 30.77 | 38.5 | PASS |
| | 190 | 836.6 | 30.89 | 38.5 | PASS |
| | 251 | 848.8 | 31.00 | 38.5 | PASS |
| CDDG | 512 | 1850.2 | 28.78 | 33.0 | PASS |
| 1000MHz | 661 | 1880 | 29.34 | 33.0 | PASS |
| 1900MHZ | 810 | 1909.8 | 29.57 | 33.0 | PASS |
| ECDDO | 128 | 824.2 | 26.77 | 38.5 | PASS |
| EGPKS 850MHz | 190 | 836.6 | 26.89 | 38.5 | PASS |
| 0301v111Z | 251 | 848.8 | 26.00 | 38.5 | PASS |
| ECDDS | 512 | 1850.2 | 25.78 | 33.0 | PASS |
| EGPKS | 661 | 1880 | 25.34 | 33.0 | PASS |
| TAOOMIUS | 810 | 1909.8 | 25.57 | 33.0 | PASS |

Note :

1) For the GPRS/EGPRS model, all the slots were tested and just the worst data was record in this report.

4.2 99%/-26dBOccupied Bandwidth

4.2.1 Definition

According to FCC section 2.1049, the occupied bandwidth is the frequency bandwidth such that, below its lower and above its upper frequency limits, the mean powers radiated are each equal to 0.5 percent of the total mean power radiated by a given emission.

Occupied bandwidth is also known as the 99% emission bandwidth.

4.2.2 Test Description

See section 4.1.1 of this report.

4.2.3 Test Results

Here the lowest, middle and highest channels are tested to record the 99% occupied bandwidth, it's about 300kHz.

| Band | Channel | Frequency (MHz) | requency (MHz) 99% Occupied -2 Bandwidth (MHz) | | Refer to Plot |
|---------------------|---------|--------------------|---|--------|---------------|
| COMCDDS | 128 | 824.2 | 0.2454 | 0.3175 | Al |

4.3 Frequency Stability

4.3.1 Requirement

According to FCC section 22.355 and FCC section 24.235, the frequency stability shall be sufficient to ensure that the fundamental emission stays within the authorized frequency block. According to FCC section 2.1055, the test conditions are:

(a) The temperature is varied from -30° C to $+50^{\circ}$ C at intervals of not more than 10° C.

(b) For hand carried battery powered equipment, the primary supply voltage is reduced to the battery operating end point which shall be specified by the manufacture. The supply voltage shall be measured at the input to the cable normally provided with the equipment, or at the power supply terminals if cables are not normally provided.

4.3.2 Test Description

4.3.3 Test Setup

The EUT, which is powered by the DC Power Supply directly, is located in the Temperature Chamber. The EUT is commanded by the System Simulator (SS) to operate at the maximum output power i.e. Power Control Level (PCL) = 5 and Power Class = 4. A call is established between the EUT and the SS via a Common Antenna.

4.3.4 Test Results

For hand carried, battery powered equipment, reduce primary supply voltage to the battery operating end point which shall be specified by the manufacturer; the normal temperature here used is 25° C. The frequency deviation limit is ± 2.5 ppm.

NOTE:

(1) The EUT stops transmitting at temperatures -20°C, 65°C

(2) The manufacturer declared that the EUT could work properly between temperatures $-20^{\circ}C$ $\sim 60^{\circ}C$.

(3) Normal Voltage = 24.0V; Max Voltage = 36.0V; Min Voltage = 9.0V.

4.4 Conducted Out of Band Emissions

4.4.1 Requirement

According toFCCsection22.917(a) and FCCsection24.238(a), the power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least 43+10*log(P)dB. This calculated to be -13dBm.

4.4.2 Test Description

See section 4.2.1 of this report.

4.4.3 Test Results

The measurement frequency range is from 30MHz to the 10thharmonic of the fundamental frequency. The lowest, middle and highest channels are tested to verify the out of band emissions.

Test Plots:

NOTE:

the power of the EUT transmitting frequency should be ignored.

4.5 Band Edge

4.5.1 Requirement

According toFCCsection22.917(b) and FCC section 24.238(b), in the 1MHz bands immediately outside and adjacent to the frequency block a resolution bandwidth of at least one percent of the emission bandwidth (26dB emission bandwidth) of the fundamental emission of the transmitter may be employed.

4.5.2 Test Description

See section 4.2.1 of this report.

4.5.3 Test Results

The lowest and highest channels are tested to verify the band edge emissions.

| Band | Channel | Frequency (MHz) | Measured Max. Band Edge Emission (dBm) | Refer to Plot | Limit (dBm) | Verdict |
|---------|---------|--------------------|---|------------------|----------------|---------|
| GSM | 128 | 824.2 | -18.88 | Plat A1 | | PASS |
| 850MHz | 251 | 848.8 | -19.87 | Plot A2 | | PASS |
| GSM | 512 | 1850.2 | -20.13 | Plat B1 | | PASS |
| 1900MHz | 810 | 1909.8 | -21.79 | Plot B2 | -13 | PASS |
| EGRPS | 128 | 824.2 | 25.12 | Plat C1 | | PASS |
| 850MHz | 251 | 848.8 | -27.12 | Plot C2 | | PASS |
| EGPRS | 512 | 1850.2 | -25.56 | Plat D1 | | PASS |

(Plot D2: EGPRS 1900 Channel = 810)

NOTE:

(1)BothGSM/GPRS was tested and the worst result was report ed.

4.6 Transmitter Radiated Power (EIRP/ERP)

4.6.1 Requirement

According to FCC section 22.913, the Effective Radiated Power (ERP) of mobile transmitters and auxiliary test transmitters must not exceed 7Watts, and FCCsection24.232, the broadband PCS mobile station is limited to 2Wattse.i.r.p.peak power.

4.6.2 Test Procedure

The measurements procedures in TIA-603C-2004 are used.

1. EUT was placed on a 1.8 meter high non-conductive stand at a 3 meter test distance from thereceive antenna. A receiving antenna was placed on the antenna mast 3 meters from the EUT for emission measurements. The height of receiving antenna is 1.8m. Detected emissions were maximized at each frequency by rotating the EUT through 360° and adjusting the receiving antenna polarization. The radiated emissionmeasurements of all transmit frequencies in three channels (High, Middle, Low) were measured with peak detector.

- 2. The EUT is then put into continuously transmitting mode at its maximum power level during the test. And the maximum value of the receiver should be recorded as (P_r) .
- 3. The EUT shall be replaced by a substitution antenna. In the chamber, an substitution antenna for the frequency band of interest is placed at thereference point of the chamber. An RF Signal source for the frequency band of interest isconnected to the substitution antenna with a cable that has been constructed to not interfere with the radiation pattern of the antenna. Apower (P_{Mea}) is applied to the input of thesubstitution antenna, and adjust the level of the signal generator output until the value of thereceiver reach the previously recorded (P_r). The power of signal source (P_{Mea}) is recorded. The test should be performed by rotating the test item and adjusting the receiving antennapolarization.
- The cable loss (P_{cl}) between the Signal Source with the Substitution Antenna and theSubstitution Antenna Gain (G_a) should be recorded after test. The measurement results are obtained as described below:

 $Power(EIRP) = P_{Mea} + P_{cl} + G_a$

- 5. This value is EIRP since the measurement is calibrated using an antenna of known gain (2.15dBi) and known input power.
- 6. ERP can be calculated from EIRP by subtracting the gain of the dipole, ERP = EIRP 2.15 dBi.

4.6.3 Test Results

The Turn Table is actuated to turn from 0° to 360°, and both horizontal and vertical polarizations of the Test Antenna are used to find the maximum radiated power. The lowest, middle and highest channels are tested. All modes are tested.

Limits

| Band | Burst Peak ERP (dBm) | | |
|-------------|----------------------|--|--|
| GSM 850MHz | ≤38.5dBm (7W) | | |
| GSM 1900MHz | ≤33.0dBm (2W) | | |

Measurement Result

| Dand | Classical | PeakERP | | Deleniertien | |
|-------|-----------|---------|------------|--------------|--|
| Band | Channel | (dBm) | Limit(dBm) | | |
| | 128 | 32.55 | 38.45 | Horizontal | |
| | 190 | 31.97 | 38.45 | Horizontal | |
| GSM | 251 | 32.25 | 38.45 | Horizontal | |
| 850 | 128 | 30.73 | 38.45 | Vertical | |
| | 190 | 30.55 | 38.45 | Vertical | |
| | 251 | 30.36 | 38.45 | Vertical | |
| | 512 | 28.77 | 33 | Horizontal | |
| | 661 | 28.23 | 33 | Horizontal | |
| GSM | 810 | 28.59 | 33 | Horizontal | |
| 1900 | 512 | 27.54 | 33 | Vertical | |
| | 661 | 27.47 | 33 | Vertical | |
| | 810 | 27.36 | 33 | Vertical | |
| | 128 | 27.53 | 38.45 | Horizontal | |
| | 190 | 27.82 | 38.45 | Horizontal | |
| EGPRS | 251 | 27.54 | 38.45 | Horizontal | |
| 850 | 128 | 25.59 | 38.45 | Vertical | |
| | 190 | 25.62 | 38.45 | Vertical | |
| | 251 | 25.53 | 38.45 | Vertical | |
| | 512 | 26.89 | 33 | Horizontal | |
| EGPRS | 661 | 26.93 | 33 | Horizontal | |
| | 810 | 26.45 | 33 | Horizontal | |
| 1900 | 512 | 25.12 | 33 | Vertical | |
| | 661 | 25.04 | 33 | Vertical | |
| | 810 | 25.11 | 33 | Vertical | |

Remark:

 $ERP(dBm) = P_{Mea} + P_{cl} + G_a - 2.15$

4.7 Radiated Out of Band Emissions

4.7.1 Requirement

According to FCC section 22.917(a) and section 24.238(a), the power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least 43+10*log(P)dB. This calculated to be -13dBm.

4.7.2 Test Description

See section 4.6.2 of this report.

4.7.3 Test Procedure

- 1. The lowest, middle and the highest channel were selected to perform tests respectively.
- 2. Employ the bi-log Test Antenna as the test system receiving antenna and set the frequency range of the Spectrum Analyzer from 30MHz to 1GHz.
- 3. The measurement is performed with the Test Antenna at both horizontal and vertical polarization respectively. Set the polarization of the Test Antenna to be horizontal.
- 4. The EUT was tested by rotating it 360 degrees with the antennas in both the vertical and horizontal orientation while raised from 1 to 4 meters to ensure the signal levels were maximized, mark the fundamental frequency and the harmonics thereof, after then record the harmonics and the plot.
- 5. Set the polarization of the Test Antenna to be vertical, then repeat step 5.
- 6. Employ the horn Test Antenna as the test system receiving antenna and set the frequency range of the Spectrum Analyzer from 1GHz to 10th harmonic of the fundamental frequency, then repeat step 4 to 6.
- 7. Set the frequency range of the Spectrum Analyzer suitably to capture the waveform; search peak and mark it; finally record the peak and the plot.

| | | Н | 9549.0 | -41.8 | -13 | Pass |
| | | Н | 11458.8 | nf | -13 | Pass |

NOTE:

1) the power of the EUT transmitting frequency should be ignored.

- 2) All spurious emission tests were performed in X,Y,Z axis direction and EUT was tested in GSM and GPRS mode, Only the worst axis test condition was recored in this test report.
- *3) 'nf' means that the emission level is too low to read out from the noise floor.*
- 4) The emission levels of below 1 GHz are very lower than the limit(<-40dBm) and not show in this report.

Photos of the EUT
