3、Circuit Description

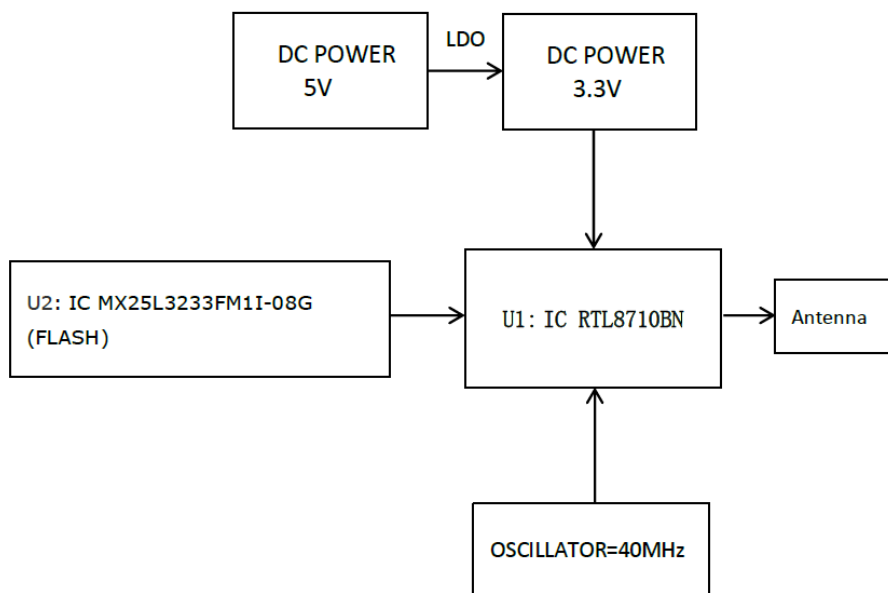

Figure1. Circuit Diagram

WiFi module has an independent power management system, and the system provides a high quality of power supply for the whole module. Flash is used for the external expansion memory. The

Excellent matching circuit in RF-Front ensures that the signal has minimal signal loss and radiation. The MCU provides the interfaces for a variety of peripherals (Timer, PWM, Interrupt, AD, the Debug) from the module to the baseboard. Each peripheral that connects to the MCU I/O pins can choose between two different I/O pin locations with the provided flexibility in various applications.
