RE: Justification for the absence of a user manual and label location regarding application for certification of FCC ID: 2ADAU5003325

To whom it may concern,

This letter is intended to justify the absence of a user manual for the above FCC ID. The device is not intended for consumer use and is located within our product and is not typically viewable to the end user. Furthermore, the device is part of the fireplace control system and requires no set up or manipulation on the part of an installer. For this reason, no user manual is required.

The required FCC markings are screen printed on the device printed circuit board directly. It is felt that if the device should fail and replacement is required, having the FCC marking directly on the device and visible to the service technician is the most sensible location.

Please contact the undersigned if further information is required.

Regards,

Mike Hollin
