

# FCC TEST REPORT

Test report On Behalf of Winner Wave Limited For Compact Mate2 Model No.: R-1

#### FCC ID: 2ADFS-MATE2-R-1

#### Prepared For : Winner Wave Limited

Unit 1615 Peninsula Tower, 538 Castle Peak Road, Lai Chi Kok Kowloon, Hong Kong

Prepared By :

Shenzhen HUAK Testing Technology Co., Ltd.

1-2/F., Building B2, Junfeng Zhongcheng Zhizao Innovation Park, Heping, Fuhai Street, Bao'an District, Shenzhen, Guangdong, China

 Date of Test:
 Apr. 18, 2023 ~ Apr. 25, 2023

 Date of Report:
 Apr. 25, 2023

 Report Number:
 HK2304181514-E

The results shown in this test report refer only to the sample(s) tested unless otherwise stated and the sample(s) are retained for 30 days only. The document is issued by HUAK, this document cannont be reproduced except in full with our prior written permission. The more details and the authenticity of the report will be confirmed at http://www.cer-mark.com.

HUAK TESTING

# 1. TEST RESULT SUMMARY

# **1.1. TEST PROCEDURES AND RESULTS**

| Requirement                                        | CFR 47 Section           | Result |
|----------------------------------------------------|--------------------------|--------|
| Antenna requirement                                | §15.203                  | PASS   |
| AC Power Line Conducted<br>Emission                | §15.207                  | PASS   |
| Maximum Conducted<br>Output Power                  | §15.407(a)               | PASS   |
| 6dB Emission Bandwidth                             | §15.407(e)               | N/A    |
| 26dB Emission Bandwidth&<br>99% Occupied Bandwidth | §15.407(a)               | PASS   |
| Power Spectral Density                             | §15.407(a)               | PASS   |
| Band edge                                          | §15.407(b)/15.209/15.205 | PASS   |
| Radiated Emission                                  | §15.407(b)/15.209/15.205 | PASS   |
| Frequency Stability                                | §15.407(g)               | PASS   |

Note:

1. PASS: Test item meets the requirement.

2. Fail: Test item does not meet the requirement.

3. N/A: Test case does not apply to the test object.

4. The test result judgment is decided by the limit of test standard.

## **1.2. INFORMATION OF THE TEST LABORATORY**

Shenzhen HUAK Testing Technology Co., Ltd. Add.: 1-2/F., Building B2, Junfeng Zhongcheng Zhizao Innovation Park, Heping, Fuhai Street, Bao'an District, Shenzhen, Guangdong, China

Testing Laboratory Authorization:

A2LA Accreditation Code is 4781.01. FCC Designation Number is CN1229. Canada IC CAB identifier is CN0045. CNAS Registration Number is L9589.

The results shown in this test report refer only to the sample(s) tested unless otherwise stated and the sample(s) are retained for 30 days only. The document is issued by HUAK, this document cannont be reproduced except in full with our prior written permission. The more details and the authenticity of the report will be confirmed at http://www.cer-mark.com

FICATION

## **1.3. MEASUREMENT UNCERTAINTY**

The reported uncertainty of measurement  $y \pm U$ , where expended uncertainty U is based on a standard uncertainty multiplied by a coverage factor of k=2, providing a level of confidence of approximately 95 %.

| No.   | Item                          | MU      |
|-------|-------------------------------|---------|
| NG 1  | Conducted Emission            | ±2.71dB |
| 2     | RF power, conducted           | ±0.37dB |
| 3     | Spurious emissions, conducted | ±0.11dB |
| 4     | All emissions, radiated(<1G)  | ±3.90dB |
| 5.000 | All emissions, radiated(>1G)  | ±4.28dB |
| 6     | Temperature                   | ±0.1°C  |
| 7     | Humidity                      | ±1.0%   |

The results shown in this test report refer only to the sample(s) tested unless otherwise stated and the sample(s) are retained for 30 days only. The document is issued by HUAK, this document cannont be reproduced except in full with our prior written permission. The more details and the authenticity of the report will be confirmed at http://www.cer-mark.com.

## 3. GENERA INFORMATION

# 3.1. TEST ENVIRONMENT AND MODE

| perating Environment: |           |          |         |
|-----------------------|-----------|----------|---------|
| Temperature:          | 25.0 °C   | HUAKTES  | HUAKTE  |
| Humidity:             | 56 % RH   | -muG     |         |
| Atmospheric Pressure: | 1010 mbar | HUAKTEST | TESTING |

#### Test Mode:

|                   | Keep the EUT in continuous transmitting                            |
|-------------------|--------------------------------------------------------------------|
| Engineering mode: | by select channel and modulations(The value of duty cycle is 100%) |

The sample was placed 0.8m/1.5m for blow/above 1GHz above the ground plane of 3m chamber. Measurements in both horizontal and vertical polarities were performed. During the test, each emission was maximized by: having the EUT continuously working, investigated all operating modes, rotated about all 3 axis (X, Y & Z) and considered typical configuration to obtain worst position, manipulating interconnecting cables, rotating the turntable, varying antenna height from 1m to 4m in both horizontal and vertical polarizations. The emissions worst-case are shown in Test Results of the following pages.

We have verified the construction and function in typical operation. All the test modes were carried out with the EUT in transmitting operation, which was shown in this test report and defined as follows:

Per-scan all kind of data rate in lowest channel, and found the follow list which it was worst case.

| TESTING | Mode          | AK TESTING              | Data rate                   | AKTESTIN    |
|---------|---------------|-------------------------|-----------------------------|-------------|

## **3.2. DESCRIPTION OF SUPPORT UNITS**

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

| Equipment | Model No.   | Serial No. | FCC ID    | Trade Name |
|-----------|-------------|------------|-----------|------------|
| 1         | IG HUAKTEST | I some     | MAKTESTIN | I STING    |

#### Note:

**HUAK TESTING** 

- 1. All the equipment/cables were placed in the worst-case configuration to maximize the emission during the test.
- 2. Grounding was established in accordance with the manufacturer's requirements and conditions for the intended use.
- 3. For conducted measurements (Output Power, Emission Bandwidth, Power Spectral Density, Spurious Emissions), the antenna of EUT is connected to the test equipment via temporary antenna connector, the antenna connector is soldered on the antenna port of EUT, and the temporary antenna connector is listed in the Test Instruments.

The results shown in this test report refer only to the sample(s) tested unless otherwise stated and the sample(s) are retained for 30 days only. The document is issued by HUAK, this document cannont be reproduced except in full with our prior written permission. The more details and the authenticity of the report will be confirmed at http://www.cer-mark.com.

| Test Procedure:   | <ol> <li>The E.U.T and simulators are connected to the main<br/>power through a line impedance stabilization network<br/>(L.I.S.N.). This provides a 50ohm/50uH coupling<br/>impedance for the measuring equipment.</li> <li>The peripheral devices are also connected to the main<br/>power through a LISN that provides a 50ohm/50uH<br/>coupling impedance with 50ohm termination. (Please<br/>refer to the block diagram of the test setup and<br/>photographs).</li> <li>Both sides of A.C. line are checked for maximum<br/>conducted interference. In order to find the maximum<br/>emission, the relative positions of equipment and all of<br/>the interface cables must be changed according to<br/>ANSI C63.10: 2013 on conducted measurement.</li> </ol> |  |  |  |  |  |
| Test Result:      | PASS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |  |  |  |

**Note:** The calibration interval of the above test instruments is 12 months and the calibrations are traceable to international system unit (SI).

The results shown in this test report refer only to the sample(s) tested unless otherwise stated and the sample(s) are retained for 30 days only. The document is issued by HUAK, this document cannont be reproduced except in full with our prior written permission. The more details and the authenticity of the report will be confirmed at http://www.cer-mark.com.

INAK

| Test Procedure: | <ul> <li>4. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rota table was turned from 0 degrees to 360 degrees to find the maximum reading.</li> <li>5. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.</li> <li>6. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, must peak an exercise method as another for the peak table.</li> </ul> |

Remark:

1. If the PK measured levels comply with average limit, then the average level were deemed to comply with average limit.

2. In restricted bands of operation, the spurious emissions below the permissible value more than 20dB.

3. The amplitude of spurious emissions which are attenuated by more than 20dB below the permiss ible value has no need to be reported.

|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Test Procedure: | 6. If the emission level of the EUT in peak mode was<br>10dB lower than the limit specified, then testing could<br>be stopped and the peak values of the EUT would be<br>reported. Otherwise the emissions that did not have<br>10dB margin would bere-tested one by one using peak,<br>quasi-peak or average method as specified and then<br>reported in a data sheet. |

Remark: Factor = Antenna Factor + Cable Loss – Pre-amplifier; Level = Reading + Factor; Margin = Level-Limit.

#### Remark:

(1) Measuring frequencies from 1 GHz to the 40 GHz.

(2) "F" denotes fundamental frequency; "H" denotes spurious frequency; "E" denotes band edge frequency.
 (3) \* denotes emission frequency which appearing within the Restricted Bands specified in provision of

15.205, then the general radiated emission limits in 15.209 apply.

(4) The emissions are attenuated more than 20dB below the permissible limits are not recorded in the report.

(5) The IF bandwidth of EMI Test Receiver between 30MHz to 1GHz was 120KHz, 1 MHz for measuring above 1 GHz, below 30MHz was 10KHz.

(6) When the test results of Peak Detected below the limits of Average Detected, the Average Detected is not need completed. For example: Top Channel at Fundamental 73.16dBuV/m(PK Value) <93.98(AV Limit), at harmonic 53.20 dBuV/m(PK Value) <54 dBuV/m(AV Limit), the Average Detected not need to completed.

| Limit:            | The frequency tolerance shall be maintained within the<br>band of operation frequency over a temperature<br>variation of 0 degrees to 35 degrees C at normal supply<br>voltage, and for a variation in the primary supply voltage<br>from 85% to 115% of the rated supply voltage at a<br>temperature of 20 degrees C.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Test Setup:       | Spectrum Analyzer     EUT       AC/DC Power supply                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Test Procedure:   | The EUT was placed inside the environmental test<br>chamber and powered by nominal AC/DC voltage. b.<br>Turn the EUT on and couple its output to a spectrum<br>analyzer. c. Turn the EUT off and set the chamber to the<br>highest temperature specified. d. Allow sufficient time<br>(approximately 30 min) for the temperature of the<br>chamber to stabilize. e. Repeat step 2 and 3 with the<br>temperature chamber set to the lowest temperature. f.<br>The test chamber was allowed to stabilize at +20<br>degree C for a minimum of 30 minutes. The supply<br>voltage was then adjusted on the EUT from 85% to<br>115% and the frequency record.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Test Result:      | PASS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

HI

# 4.9. ANTENNA REQUIREMENT

#### **Standard Applicable**

For intentional device, according to FCC 47 CFR Section 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device.

#### Refer to statement below for compliance.

The manufacturer may design the unit so that the user can replace a broken antenna, but the use of a standard antenna jack or electrical connector is prohibited. Further, this requirement does not apply to intentional radiators that must be professionally installed.

#### Antenna Connected Construction

The antenna used in this product is a PCB Antenna, is a permanently attached antenna on the PCB. It conforms to the standard requirements. The directional gains of antenna used for transmitting is 1.64dBi.

### <u>WIFI ANTENNA</u>
