RF Exposure Letter

According to 447498 D01 General RF Exposure Guidance v06 The 1 - g and 10 - g SAR test

exclusion thresholds for 100 MHz to 6 GHz at test separation distances $\leq 50 \text{ mm}$ are determined by: [(max. power of channel, including tune - up tolerance, mW)/(min. test separation distance, mm)] $\cdot [\sqrt{f(GHz)}] \leq 3.0$ for 1 - g SAR and ≤ 7.5 for 10 - g extremity SAR, where

f(GHz) is the RF channel transmit frequency in GHz

Power and distance are rounded to the nearest mW and mm before calculation The result is rounded to one decimal place for comparison

BT:

Pt = 3.38dBm=2.1777mW at 2480MHz So (2.1777mW/5mm)x $\checkmark 2.480$ GHz = 0.6859 < 3Then SAR evaluation is not required BLE: Pt = 3.24dBm=2.1086mW at 2480MHz So (2.1086mW/5mm)x $\checkmark 2.480$ GHz = 0.6641 < 3

Then SAR evaluation is not required
