

Difference Statement

The difference between Z200 machine A and Z200 machine B is the sensor belt, as shown in Table I.

Table I

	Machine A		Machine B
sensor belt	Material	Micro-fiber cloth	Lycra cloth
	Structure	Have rectangle-sized bump on both sides	Have rectangle-sized bump on one side

Except the sensor belt, the other devices are the same. The RF modules are also the same, so the RF power is not affected.
