# 1. ATTESTATION OF TEST RESULTS

**COMPANY NAME:** ENERGOUS CORPORATION  
3590 NORTH FIRST STREET,  
SUITE 210,  
SAN JOSE, CA 95134, U.S.A

**EUT DESCRIPTION:** WIRELESS CHARGER

**MODEL NUMBER:** VN-1810

**BRAND:** ENERGOUS

**SERIAL NUMBER:** 7004

**SAMPLE RECEIPT DATE:** AUGUST 24, 2021

**DATE TESTED:** AUGUST 24, 2021 – SEPTEMBER 02, 2021

APPLICABLE STANDARDS	
STANDARD	TEST RESULTS
FCC CFR 47 PART 18 SUBPART C	Complies

UL Verification Services Inc. tested the above equipment in accordance with the requirements set forth in the above standards. The test results show that the equipment tested is capable of demonstrating compliance with the requirements as documented in this report.

The results documented in this report apply only to the tested sample, under the conditions and modes of operation as described herein. It is the manufacturer's responsibility to assure that additional production units of this model are manufactured with identical electrical and mechanical components. All samples tested were in good operating condition throughout the entire test program. Measurement Uncertainties are published for informational purposes only and were not taken into account unless noted otherwise.

This document may not be altered or revised in any way unless done so by UL Verification Services Inc. and all revisions are duly noted in the revisions section. Any alteration of this document not carried out by UL Verification Services Inc. will constitute fraud and shall nullify the document. This report must not be used by the client to claim product certification, approval, or endorsement by A2LA, NIST.

## 2. TEST METHODOLOGY

This report contains data provided by the customer which can impact the validity of results. UL Verification Services Inc. is only responsible for the validity of results after the integration of the data provided by the customer.

The tests documented in this report were performed in accordance with FCC / OST MP-5, "FCC Methods of Measurements of Radio Noise Emissions from Industrial, Scientific, and Medical Equipment."

## 3. FACILITIES AND ACCREDITATION

UL LLC is accredited by A2LA, certification #0751.05, for all testing performed within the scope of this report. Testing was performed at the locations noted below.

	Address	ISED CABID	ISED Company Number	FCC Registration
<input type="checkbox"/>	Building 1: 47173 Benicia Street, Fremont, CA 94538, USA	US0104	2324A	208313
<input type="checkbox"/>	Building 2: 47266 Benicia Street, Fremont, CA 94538, USA	US0104	22541	208313

## 4. DECISION RULES AND MEASUREMENT UNCERTAINTY

### 4.1. METROLOGICAL TRACEABILITY

All test and measuring equipment utilized to perform the tests documented in this report are calibrated on a regular basis, with a maximum time between calibrations of one year or the manufacturers' recommendation, whichever is less, and where applicable is traceable to recognized national standards.

### 4.2. DECISION RULES

The Decision Rule is based on Simple Acceptance in accordance with ISO Guide 98-4:2012 Clause 8.2. (Measurement uncertainty is not taken into account when stating conformity with a specified requirement.)

### 4.3. MEASUREMENT UNCERTAINTY

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the apparatus:

PARAMETER	U <sub>Lab</sub>
Worst Case Conducted Disturbance, 9KHz to 0.15 MHz	3.78 dB
Worst Case Conducted Disturbance, 0.15 to 30 MHz	3.40 dB
Worst Case Radiated Disturbance, 9KHz to 30 MHz	2.84 dB
Worst Case Radiated Disturbance, 30 to 1000 MHz	6.01 dB
Worst Case Radiated Disturbance, 1000 to 18000 MHz	4.73 dB
Worst Case Radiated Disturbance, 18000 to 26000 MHz	4.51 dB
Worst Case Radiated Disturbance, 26000 to 40000 MHz	5.29 dB

Uncertainty figures are valid to a confidence level of 95%.

### 4.4. SAMPLE CALCULATION

#### RADIATED EMISSIONS

Where relevant, the following sample calculation is provided:

Field Strength (dBuV/m) = Measured Voltage (dBuV) + Antenna Factor (dB/m) + Cable Loss (dB) – Preamp Gain (dB)

$$36.5 \text{ dBuV} + 18.7 \text{ dB/m} + 0.6 \text{ dB} - 26.9 \text{ dB} = 28.9 \text{ dBuV/m}$$

#### MAINS CONDUCTED EMISSIONS

Where relevant, the following sample calculation is provided:

Final Voltage (dBuV) = Measured Voltage (dBuV) + Cable Loss (dB) + Limiter Factor (dB) + LISN Insertion Loss.

$$36.5 \text{ dBuV} + 0 \text{ dB} + 10.1 \text{ dB} + 0 \text{ dB} = 46.6 \text{ dBuV}$$

## **5. EQUIPMENT UNDER TEST**

### **5.1. EUT DESCRIPTION**

The EUT is an over-the-air, distance charging transmitter. Wireless power transfer is only transmitting a continuous carrier wave signal at 917.5 MHz frequency single channel when client device is positioned within the charging zone. The charging zone of the EUT is up to 1 meter for client device placed in front of the EUT. The EUT can only charge one client device at a time. The EUT uses BLE to pair with the client device.

This report documents test results of the Wireless Power Transfer ISM portion of the wireless charger.

### **5.2. OPERATING FREQUENCY AND POWER**

The EUT operates at 917.5 MHz. And the maximum RF energy generated is 40dBm as declared by the applicant. The device is powered via a CONN power jack interface (28V / 1.0 Amps).

This device also includes an ultrasonic sensor operating at 175 kHz at power/energy level of less than 1mW.

### **5.3. DESCRIPTION OF AVAILABLE ANTENNAS**

The antenna gain(s) and type, as provided by the manufacturer, are as follows:

The EUT supports one patch antenna with antenna peak gain 8dBi.

### **5.4. SOFTWARE AND FIRMWARE**

The firmware installed in the EUT during testing was Version: 5.0.2.255

The test utility software was WattUp app Version: : 4.0.31

## 5.5. WORST-CASE CONFIGURATION AND MODE

The EUT is a tabletop device and it has two ports, one is the CONN power jack port for power only, second port is a micro USB port for command line interface control, end user will not have access to it. Therefore, all final radiated testing was performed with the EUT in tabletop orientation powered by AC/DC adapter via cable.

The worst case orientation and position of the client device was investigated and declared by the applicant. The applicant determined that the operating condition for worst-case emissions is when the charger is operating at the maximum rated level and the maximum possible power (as adjusted by internal power control circuitry) is coupled to the client device. This condition occurs at the following orientation and position: the client device is directly centered on the tabletop, 35cm in front of the EUT with a landscape orientation where right side of the client is directly pointing at the EUT. All of the charging mode final testing is performed using this configuration of charger and client.

The antenna is active for all the charging mode testing.

Configuration	Mode	Description
1	Standby mode	EUT is powered by AC/DC adapter via cable. Wireless Power Transfer ISM portion is in standby mode, ultrasonic sensor is on. Ultrasonic sensor and BLE are in normal operating mode as the worst case.
2	Charging mode	EUT is powered by AC/DC adapter via cable and client device receives maximum 917.5 MHz RF energy from EUT, ultrasonic sensor is on. Wireless Power Transfer ISM portion, ultrasonic sensor, and BLE can transmit simultaneously. Ultrasonic sensor and BLE are in normal operating mode as the worst case.

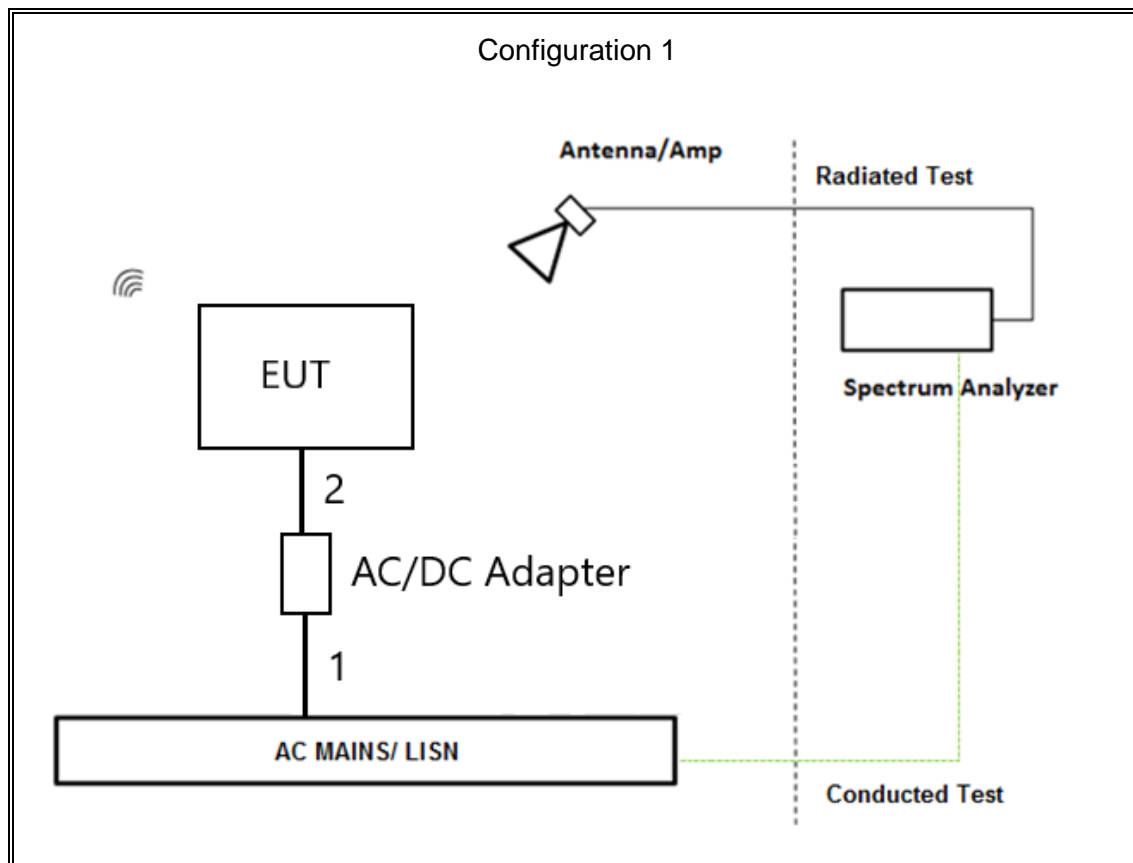

### 5.6. DESCRIPTION OF TEST SETUP

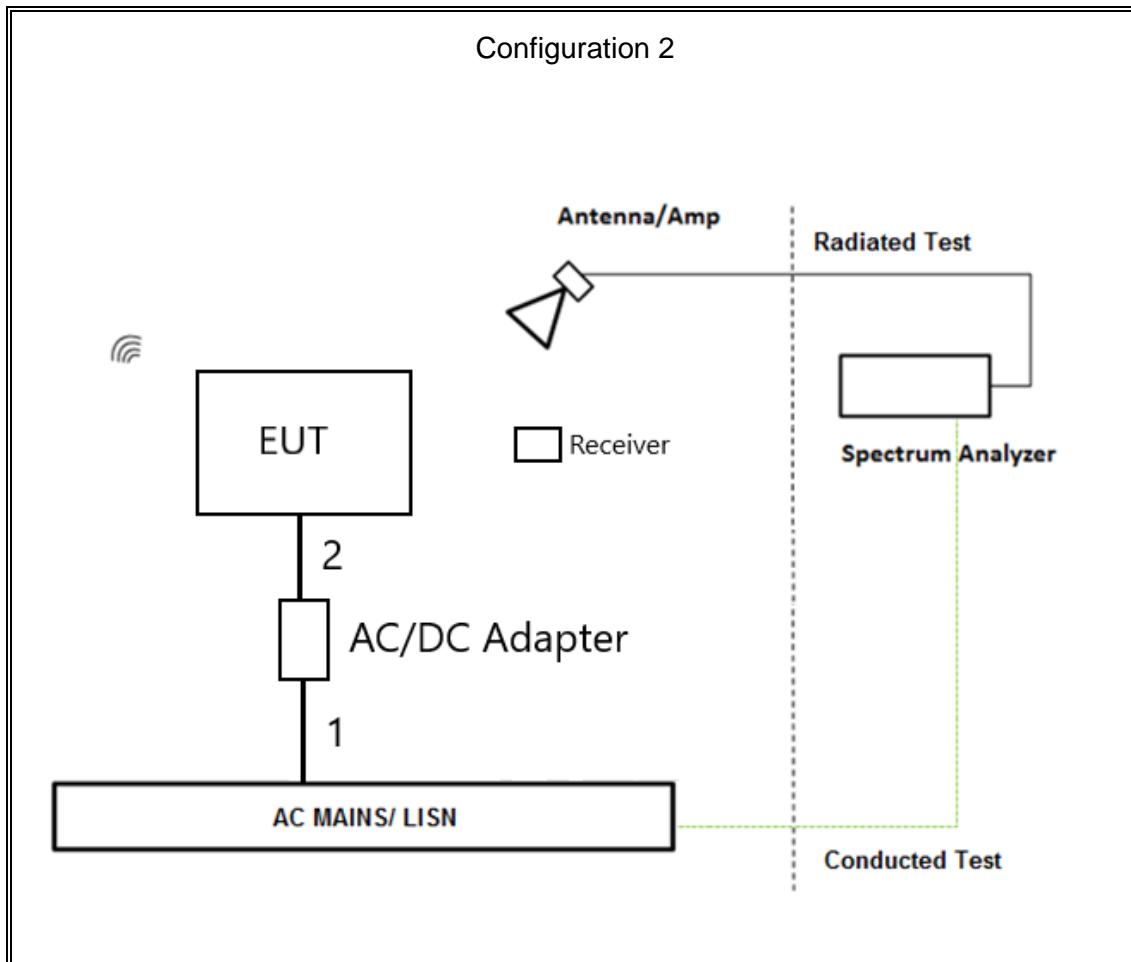

SUPPORT TEST EQUIPMENT						
Description	Manufacturer	Model	Serial Number	FCC ID/ DoC		
1 Receiver (client device)	Energous	-	PER300F	DoC		
EUT AC/DC Adapter (80 W)	TDK-Lambda	DT80PW280D	E20122202-4M-0011-2105	DoC		
I/O CABLES (RF RADIATED/AC POWER LINE TEST)						
Cable No.	Port	# of Identical Ports	Connector Type	Cable Type	Cable Length (m)	Remarks
1	AC	1	AC	Un-shielded	1.8	AC Mains to AC/DC Adapter
2	DC	1	CONN PWR JACK	Un-shielded	1.5	AC/DC Adapter to EUT

#### TEST SETUP- RADIATED TEST/AC POWER LINE TEST

The EUT is powered by AC/DC adapter via cable, the client device is directly centered on the tabletop, 35cm in front of the EUT with a landscape orientation where right side of the client is directly pointing at the EUT. All of the charging mode final testing is performed at this configuration.

## 8. RADIATED EMISSIONS

### LIMIT

#### §18.301 Operating frequencies

The EUT operates at 917.5 MHz, within the tolerance of the ISM Frequency of 915 +/- 13MHz.

#### §18.305 Field Strength Limits

(b) The field strength levels of emissions which lie outside the bands specified in §18.301, unless otherwise indicated, shall not exceed the following:

Equipment	Operating frequency	RF Power generated by equipment (watts)	Field strength limit (µV/m)	Distance (meters)
Any type unless otherwise specified (miscellaneous)	Any ISM frequency	Below 500 500 or more	25 25 x SQRT(power/500)	300 <sup>1</sup> 300

<sup>1</sup>Field strength may not exceed 10µV/m at 1600 meters. Consumer equipment operating below 1000 MHz is not permitted the increase in field strength otherwise permitted here for power over 500 watts.

The RF Power generated by the equipment is below 500 W therefore the field strength limit is 25uV/m at 300 m, equivalent to 28 dBuV/m at 300 m.

### TEST PROCEDURE

Tested in accordance with FCC / OST MP-5

The frequency range was investigated from 9 kHz to 10 GHz. An EUT which is normally operated on a table shall be placed on a non-conducting table having a height of 1 meter above test site ground level for all frequency ranges.

For pre-scans above 1 GHz the resolution bandwidth is set to 1 MHz; the video bandwidth is set to 30 KHz for peak measurements.

For final measurements above 1 GHz the resolution bandwidth is set to 1 MHz; the video bandwidth is set to 3 MHz for peak measurements and as applicable for average measurements.

For below 30MHz testing, investigation was done on three antenna orientations (parallel, perpendicular, and ground-parallel), parallel and perpendicular are the worst orientations, therefore testing was performed on these two orientations only. Blue color trace on plots: Parallel orientation. Green color trace on plots: Perpendicular orientation. For a loop antenna, the antenna height shall be set at around 2 meters.

**KDB 414788 Open Field Site(OFS) and Chamber Correlation Justification**

For below 30MHz testing, based on KDB 414788, Clause 2, for Part 18 equipment, Section 2.1 of FCC Measurement Procedure MP-5 also permits the use of test sites other than an open-field test site only if it can be shown that the results obtained at such a location are correlated with those made at an open-field test site.

OFS and chamber correlation testing had been performed and chamber measured test result is the worst case test result.

**Distance Correction Factor**

Based on FCC 18.305, note 2. Testing for compliance with these limits may be made at closer distances, provided a sufficient number of measurements are taken to plot the radiation pattern, to determine the major lobes of radiation, and to determine the expected field strength level at 30, 300, or 1600 meters. Alternatively, if measurements are made at only one closer fixed distance, then the permissible field strength limits shall be adjusted using 1/d as an attenuation factor.

- Distance factor from 3m to 300m =  $20\log(3/300) = -40\text{dB}$

**RESULTS**

This device includes an ultrasonic sensor. The Part 18 limits for this sensor (ultrasonic operating below 500W at 175 kHz) are  $2,400/F(\text{kHz})$  at 300m, and so the limit is 13.7 uV/m (22.7 dBuV/m) at 300m for the frequency range 9kHz – 30 MHz (18.309). Emissions are evaluated in section 8.1

## 8.1. SPURIOUS EMISSIONS 9 kHz TO 30 MHz

### 8.1.1. CONFIGURATION 1

## DATA

Marker	Frequency (MHz)	Meter Reading (dBuV)	Det	Loop Antenna (E ACF)	Amp/Cbl (dB)	Dist Corr 300m	Corrected Reading (dBuVolts/m)	Part 18 Limit 300m (dBuV/m)	Margin (dB)	Azimuth (Degs)
1	.00903	14.37	Pk	61.4	-31.3	-40	4.47	22.7	-18.23	0-360

## 9. AC POWER LINE CONDUCTED EMISSIONS

### LIMITS

§ 18.307 For the following equipment, when designed to be connected to the public utility (AC) power line the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies shall not exceed the limits in the following table. Compliance with the provisions of this paragraph shall be based on the measurements of the radio frequency voltage between each power line and ground at the power terminal using a 50  $\mu$ H/50 ohms line impedance stabilization network (LISN).

§ 18.307 (b) All other Part 18 consumer devices:

Frequency of Emission (MHz)	Conducted Limit (dB $\mu$ V)	
	Quasi-peak	Average
0.15-0.5	66 to 56 *	56 to 46 *
0.5-5	56	46
5-30	60	50

\*Decreases with the logarithm of the frequency.

### TEST PROCEDURE

Tested in accordance with FCC / OST MP-5
