# 1. Summary of Test Report

### 1.1. Test Items

| Product Name        | Mobile phone                     |
|---------------------|----------------------------------|
| Model Name          | HLTE239E                         |
| Applicant's name    | Hisense International Co., Ltd.  |
| Manufacturer's Name | Hisense Communications Co., Ltd. |

### 1.2. Test Standards

FCC Part15-2019; ANSI C63.10-2013.

### 1.3. Test Result

#### Pass

Please refer to "5.2. Test Results"

### 1.4. Testing Location

Address: Building G, Shenzhen International Innovation Center, No.1006 Shennan Road, Futian District, Shenzhen, Guangdong, P. R. China

#### 1.5. Project data

| Testing Start Date: | 2022-08-12 |
|---------------------|------------|
| Testing End Date:   | 2022-09-21 |

# 3. Equipment Under Test (EUT) and Ancillary Equipment (AE)

### 3.1. About EUT

| Product Name                 | Mobile phone                      |
|------------------------------|-----------------------------------|
| Model Name                   | HLTE239E                          |
| Frequency Range              | 2400MHz~2483.5MHz                 |
| Equipment type               | Bluetooth <sup>®</sup> Low Energy |
| Type of Modulation           | GFSK                              |
| PHY                          | LE 1M/2M                          |
| Number of Channels           | 40                                |
| Antenna Type                 | Integrated antenna                |
| Antenna Gain                 | -0.32dBi                          |
| Power Supply                 | 3.85V DC by Battery               |
| FCC ID                       | 2ADOBHLTE239E                     |
| Condition of EUT as received | No abnormality in appearance      |

Note: Components list, please refer to documents of the manufacturer; it is also included in the original test record of Shenzhen Academy of Information and Communications Technology.

### 3.2. Internal Identification of EUT used during the test

| EUT ID* | IMEI            | HW Version      | SW Version         | Receive Date |
|---------|-----------------|-----------------|--------------------|--------------|
|         | 868551060006114 | ES201 MR \/1 0  | Hisense_HLTE239E_0 | 2022 08 04   |
| 0107aa  | 00000100000114  | F3301-IVID-V1.0 | 1_S01_01_05_MX05   | 2022-00-04   |
| LIT12aa | 865260060000358 | ES201 MR \/1 0  | Hisense_HLTE239E_0 | 2022 08 04   |
| UTIZaa  | 003209000000330 | F3501-IVID-V1.0 | 1_S01_01_05_MX05   | 2022-00-04   |

\*EUT ID: is used to identify the test sample in the lab internally.

UT07aa is used for conduction test, UT12aa is used for radiation test and AC Power line Conducted Emission test.

### 3.3. Internal Identification of AE used during the test

| AE ID* | Description | AE ID* |
|--------|-------------|--------|
| AE1    | Battery     | /      |
| AE2    | Charger     | /      |
| AE3    | USB Cable   | /      |
| AE4    | Headset     | /      |

AE1

| Model           | LPN385400B                            |
|-----------------|---------------------------------------|
| Manufacturer    | Shenzhen Aerospac Electronic CO.,Ltd. |
| Capacity        | 4000mAh                               |
| Nominal Voltage | 3.85V                                 |
| AE2             |                                       |

| Model                 | KS232D  |
| Manufacturer          | Dongguan Keling Electronic Technology Co., Ltd.       |

\*AE ID: is used to identify the test sample in the lab internally.

### 3.4. General Description

The Equipment under Test (EUT) is a model of Mobile phone with integrated antenna and battery. It consists of normal options: Lithium Battery, Charger, USB Cable and Headset. Manual and specifications of the EUT were provided to fulfil the test. Samples undergoing test were selected by the client.

# 4. <u>Reference Documents</u>

### 4.1. Documents supplied by applicant

EUT feature information is supplied by the applicant or manufacturer, which is the basis of testing.

### 4.2. Reference Documents for testing

The following documents listed in this section are referred for testing.

| Reference   | Title   | Version |
|-------------|---|---------|
| FCC Part 15 | FCC CFR 47, Part 15, Subpart C:                         | 2019    |
|             | 15.205 Restricted bands of operation;                   |         |
|             | 15.209 Radiated emission limits, general requirements;  |         |
|             | 15.247 Operation within the bands 902–928MHz,           |         |
|             | 2400–2483.5 MHz, and 5725–5850 MHz                      |         |
| ANSI C63.10 | American National Standard of Procedures for Compliance | 2013    |
|             | Testing of Unlicensed Wireless Devices                  |         |

# 5. Test Results

### 5.1. <u>Testing Environment</u>

| Normal Temperature: | 15~35°C |
|---------------------|---------|
| Relative Humidity:  | 20~75%  |

### 5.2. Test Results

| No | Test cases                                | Sub-clause of Part 15C | Verdict |
|----|---|------------------------|---------|
| 0  | Antenna Requirement                       | 15.203                 | Р       |
| 1  | Maximum Peak Output Power                 | 15.247 (b)             | Р       |
| 2  | Peak Power Spectral Density               | 15.247 (e)             | Р       |
| 3  | 6dB Bandwidth                             | 15.247 (a)             | Р       |
| 4  | Band Edges Compliance                     | 15.247 (d)             | Р       |
| 5  | Transmitter Spurious Emission - Conducted | 15.247 (d)             | Р       |
| 6  | Transmitter Spurious Emission - Radiated  | 15.247, 15.205, 15.209 | Р       |
| 7  | AC Power line Conducted Emission          | 15.107, 15.207         | Р       |

See **ANNEX A** for details.

### 5.3. Statements

SAICT has evaluated the test cases requested by the applicant/manufacturer as listed in section 5.2 of this report, for the EUT specified in section 3, according to the standards or reference documents listed in section 4.2.

Disclaimer:

A. After confirmation with the customer, the sample information provided by the customer may affect the validity of the measurement results in this report, and the impact and consequences arising therefrom shall be borne by the customer.

B. The samples in this report are provided by the customer, and the test results are only applicable to the samples received.

# 6. Test Equipments Utilized

### **Test software**

| No. | Equipment | Manufacturer    | Version  |
|-----|-----------|-----------------|----------|
| 1   | JS1120-3  | Tonscend        | 3.2      |
| 2   | EMC32     | Rohde & Schwarz | 10.50.40 |

EUT is engineering software provided by the customer to control the transmitting signal. The EUT was programmed to be in continuously transmitting mode.

### Anechoic chamber

Fully anechoic chamber by ETS-Lindgren

# 7. Laboratory Environment

#### Semi-anechoic chamber

| Temperature                       | Min. = 15 °C, Max. = 35 °C                      |
|-----------------------------------|---|
| Relative humidity                 | Min. = 20 %, Max. = 75 %                        |
| Shielding effectiveness           | 0.014MHz-1MHz> 60 dB; 1MHz-18000MHz>90 dB       |
| Electrical insulation             | > 2MΩ   |
| Ground system resistance          | < 4 Ω   |
| Normalised site attenuation (NSA) | < $\pm$ 4 dB, 3 m distance, from 30 to 1000 MHz |

#### Shielded room

| Temperature              | Min. = 15 °C, Max. = 35 °C                |
|--------------------------|---|
| Relative humidity        | Min. = 20 %, Max. = 75 %                  |
| Shielding effectiveness  | 0.014MHz-1MHz> 60 dB; 1MHz-18000MHz>90 dB |
| Electrical insulation    | > 2MΩ                                     |
| Ground system resistance | < 4 Ω                                     |

### Fully-anechoic chamber

| Temperature                           | Min. = 15 °C, Max. = 35 °C                  |
|---------------------------------------|---|
| Relative humidity                     | Min. = 20 %, Max. = 75 %                    |
| Shielding effectiveness               | 0.014MHz-1MHz> 60 dB; 1MHz-18000MHz>90 dB   |
| Electrical insulation                 | > 2MΩ                                       |
| Ground system resistance              | < 4 Ω                                       |
| Voltage Standing Wave Ratio<br>(VSWR) | $\leq$ 6 dB, from 1 to 18 GHz, 3 m distance |
| Uniformity of field strength          | Between 0 and 6 dB, from 80 to 6000 MHz     |

# 8. <u>Measurement Uncertainty</u>

# ANNEX A: Detailed Test Results

### **Test Configuration**

### The measurement is made according to ANSI C63.10.

#### 1) Conducted Measurements

- 1. Connect the EUT to the test system correctly.
- 2. Set the EUT to the required work mode.
- 3. Set the EUT to the required channel.
- 4. Set the spectrum analyzer to start measurement.
- 5. Record the values.

#### 2) Radiated Measurements

#### Test setup:

### 9kHz-30MHz:

The EUT are measured in a semi-anechoic chamber. The EUT is placed on a non-conductive stand of 80cm high, and at a measurement distance of 3m from the receiving antenna. The center of the receiving loop antenna is 1.0 meter above the ground. The test setup refers to figure below. Detected emissions were maximized at each frequency by rotating the EUT and adjusting the receiver antenna polarization.

#### 30MHz-1GHz:

The EUT are measured in a semi-anechoic chamber. The EUT is placed on a non-conductive stand of 80cm high, and at a measurement distance of 3m from the receiving antenna. The center of the receiving antenna is 1.0 meter to 4.0 meter above the ground. The test setup refers to figure below. Detected emissions were maximized at each frequency by rotating the EUT and adjusting the receiver antenna polarization.

#### Above 1GHz:

EUT was placed on a 1.5 meter high non-conductive table at a 3 meter test distance from the receive antenna. The test setup refers to figure below. Detected emissions were maximized at each frequency by rotating the EUT and adjusting the receiving antenna polarization.

### 3GHz-40GHz:

#### 3) AC Power line Conducted Emission Measurement

For Bluetooth LE, the EUT is working under test mode. The EUT is commanded to operate at maximum transmitting power.

### A.0 Antenna requirement

#### **Measurement Limit:**

| Standard     | Requirement  |  |  |  |
|--------------|--|--|--|--|
|              | An intentional radiator shall be designed to ensure that no antenna other than that  |  |  |  |
|              | furnished by the responsible party shall be used with the device. The use of a       |  |  |  |
|              | permanently attached antenna or of an antenna that uses a unique coupling to the     |  |  |  |
|              | intentional radiator shall be considered sufficient to comply with the provisions of |  |  |  |
|              | this section. The manufacturer may design the unit so that a broken antenna can      |  |  |  |
|              | be replaced by the user, but the use of a standard antenna jack or electrical        |  |  |  |
| FCC CRF Part | connector is prohibited. This requirement does not apply to carrier current devices  |  |  |  |
| 15.203       | or to devices operated under the provisions of §15.211, §15.213, §15.217,            |  |  |  |
|              | §15.219, or §15.221. Further, this requirement does not apply to intentional         |  |  |  |
|              | radiators that must be professionally installed, such as perimeter protection        |  |  |  |
|              | systems and some field disturbance sensors, or to other intentional radiators        |  |  |  |
|              | which, in accordance with §15.31(d), must be measured at the installation site.      |  |  |  |
|              | However, the installer shall be responsible for ensuring that the proper antenna is  |  |  |  |
|              | employed so that the limits in this part are not exceeded.                           |  |  |  |

Conclusion: The Directional gains of antenna used for transmitting is -0.32dBi. The RF transmitter uses an integrate antenna without connector.

### A.1 Maximum Peak Output Power

#### Method of Measurement: See ANSI C63.10-clause 11.9.1.3.

The maximum peak conducted output power may be measured using a broadband peak RF power meter.

#### **Measurement Limit:**

| Standard                  | Limit (dBm) |
|---------------------------|-------------|
| FCC 47 CRF Part 15.247(b) | < 30        |

#### **Measurement Results:**

| Mode  | Frequency (MHz) | RF output power (dBm) | Conclusion |
|-------|-----------------|-----------------------|------------|
|       | 2402(CH0)       | 0.72                  | Р          |
| LE 1M | 2440(CH19)      | 0.38                  | Р          |
|       | 2480(CH39)      | 0.26                  | Р          |
|       | 2402(CH0)       | 0.65                  | Р          |
| LE 2M | 2440(CH19)      | 0.33                  | Р          |
|       | 2480(CH39)      | 0.23                  | Р          |

**Conclusion: Pass** 

### A.2 Peak Power Spectral Density

### Method of Measurement: See ANSI C63.10-clause 11.10.2.

#### Measurement Limit:

| Standard                  | Limit (dBm/3 kHz) |
|---------------------------|-------------------|
| FCC 47 CRF Part 15.247(e) | < 8 dBm/3 kHz     |

#### Measurement Results:

Fig.12 6dB Bandwidth (CH39), LE 2M

### A.4 Band Edges Compliance

### Method of Measurement: See ANSI C63.10-clause 11.13.3.2.

#### Measurement Limit:

| Standard                   | Limit (dB) |
|----------------------------|------------|
| FCC 47 CFR Part 15.247 (d) | > 20       |

### Measurement Result:

| Mode  | Frequency (MHz) | Test Resu | ılts (dB) | Conclusion |
|-------|-----------------|-----------|-----------|------------|

Fig.34 Conducted Spurious Emission (CH39, 1GHz-26.5GHz), LE 2M

### A.6 Transmitter Spurious Emission - Radiated

#### Method of Measurement: See ANSI C63.10-clause 11.11&11.12.

#### Measurement Limit:

| Standard                               | Limit (dBm)                   |  |  |
|--|-------------------------------|--|--|
| FCC 47 CFR Part 15.247, 15.205, 15.209 | 20dBm below peak output power |  |  |

In addition, radiated emissions which fall in the restricted bands, as defined in § 15.205(a), must also comply with the radiated emission limits specified in § 15.209(a) (see § 15.205(c)).

#### Limit in restricted band:

| Frequency of emission<br>(MHz) | Field strength(µV/m) | Measurement<br>distance(meters) |
|--------------------------------|----------------------|---------------------------------|
| 0.009-0.490                    | 2400/F(kHz)          | 300                             |
| 0.490-1.705                    | 24000/F(kHz)         | 30                              |
| 1.705-30.0                     | 30                   | 30                              |
| 30-88                          | 100                  | 3                               |
| 88-216                         | 150                  | 3                               |
| 216-960                        | 200                  | 3                               |
| Above 960                      | 500                  | 3                               |

#### **Test Condition:**

The EUT was placed on a non-conductive table. The measurement antenna was placed at a distance of 3 meters from the EUT. During the tests, the antenna height and the EUT azimuth were varied in order to identify the maximum level of emissions from the EUT. This maximization process was repeated with the EUT positioned in each of its three orthogonal orientations.

| Frequency of emission<br>(MHz) | RBW/VBW       | Sweep Time(s) |
|--------------------------------|---------------|---------------|
| 30-1000                        | 120kHz/300kHz | 5             |
| 1000-4000                      | 1MHz/3MHz     | 15            |
| 4000-18000                     | 1MHz/3MHz     | 40            |
| 18000-26500                    | 1MHz/3MHz     | 20            |

**Note:** According to the performance evaluation, the radiated emission margin of EUT is over 20dB in the band from 9kHz to 30MHz.Therefore, the measurement starts from 30MHz to tenth harmonic.

The measurement results include the horizontal polarization and vertical polarization measurements.

For radiated measurement, pre-scanned in three orthogonal panels, X, Y, Z. The worst cases (Y plane) were recorded in this report.

### **Measurement Results:**

| 17929.714286       | 43.53               | 54.00             | 11.47          | V   | 18.9            |

#### Note:

A "reference path loss" is established and the  $A_{Rpl}$  is the attenuation of "reference path loss", and Antenna Factor, the gain of the preamplifier, the cable loss.  $P_{Mea}$  is the field strength recorded from the instrument.

The measurement results are obtained as described below:

Result= P<sub>Mea</sub> +Cable Loss +Antenna Factor-Gain of the preamplifier.

See below for test graphs.

Conclusion: Pass

### A.7 AC Power line Conducted Emission

#### Method of Measurement: See ANSI C63.10-clause 6.2.

#### **Test Condition:**

| Voltage (V) | Frequency (Hz) |  |  |
|-------------|----------------|--|--|
| 120         | 60             |  |  |

#### Measurement Result and limit:

#### BLE-AE2, AE3, AE4

| Frequency range | Quasi-peak Average-peak |              | Result       | Conclusion |            |  |
|-----------------|-------------------------|--------------|--------------|------------|------------|--|
| (MHz)           | Limit (dBμV)            | Limit (dBμV) | Traffic Idle |            | Conclusion |  |
| 0.15 to 0.5     | 66 to 56                | 56 to 46     |              |            |            |  |
| 0.5 to 5        | 56                      | 46           | Fig.48       | Fig.49     | Р          |  |
| 5 to 30         | 60                      | 50           |              |            |            |  |

NOTE: The limit decreases linearly with the logarithm of the frequency in the range 0.15 MHz to 0.5 MHz.

**Note:** The measurement results include the L1 and N measurements.

See below for test graphs. Conclusion: Pass
