Subject: Class II Permissive Change Request Letter

To Whom It May Concern:

We are applying for a Class II Permissive Change to the FCC approval of:

Company name: Otodata Wireless Network Inc.

Product Description: Remote tank level monitoring communicator

FCC ID: 2ADQFMT4AD16W1

Original Grant Date: 02/23/2021

The change to this product is to remove the LTE integrated module (Quectel BG96). No changes were made to the Bluetooth (BLE) transceiver circuitry. The Printed Circuit Board remains the same as well as its Bluetooth PCB Antenna. Since the change involves the removal of the LTE integrated module, radiated scans for the spurious emissions were made.

Test data is included in the application. As the product has less functionality and continues to comply with rules, we request a Class II Permissive Change per 47 CFR 2.1043 and the removal of "This device contains FCC ID: XMR201707BG96" from the Grant Notes section of the Grant of Equipment Authorization.

If you have any questions or comments, please do not hesitate to contact me.

Sincerely,

A handwritten signature in blue ink that reads "Pascal Turcotte, ing., Eng.".

Pascal Turcotte, ing., Eng.
