4.4 Address Server:

Address Server, mean this AC controller can distribute IP address for the Wireless AP connected with this AC controller, to avoid AP' s IP address conflict in setup.

Server IP address: mean the server's IP address, if user set is as 192.168.188.1, then AP will get IP address of 192.168.188.X.

Server Address Count: Mean how many AP can connect with this AC controller.

Allocated AP number: Mean QTY of Wireless AP connected into this AC controller.

	Intelligent Wireless AP Management Platform							
	AP Management	AP Address Server						
1	Device List		Server IP Address 192 . 16	8.188.1				
чъ			Server Address Count 300	(1-300)				
	Device Group		Effective Time(s) 86400	Range:(300-864000)s				
2	Device Log	AP address information list			Refresh Apply			
		AP Device Name	IP Address	MAC Address	Lease Time			
×B	Address Server	XD9341	192.168.188.2	0a:d3:8d:d6:02:53	0 D 22:41:48			
R	Intelligent Gateway							

4.5 Intelligent Gateway

In this part, AC controller work as enterprise router, can access into more than 200 end users.

A. LAN Settings:

Click Intelligent Gateway will automatically jump to the LAN settings

Intellig	Intelligent Wireless AP Management Platform								
AP Management	Status	Network Firew	all Storage/Server	Management			🕐 Help		
LAN Settings WA	AN Settings	Cloud Settings	Authentication Settings	Local Authentication Management			English V		
LAN IP Setting									
				IP Address 192 . 168 Subnet Mask 255 . 255	. 10 . 1 . 252 . 0				
DHCP Server Setting									
				DHCP Server O Enable DHCP IP Count 192 . 168 DHCP Lease Time 86400	 Disable 10 . 1 - 192 . 16 Range:(300-864000)s 	8 . 11 . 245			
							Apply		
Static Bind IP-MAC				Delete 📃 Local			Add Refresh		
				192 192.1 192.1 192.1	168.10	3			

LAN IP Setting: Set IP address for LAN Subnet mask Set Subnet mask for LAN DHCP Server DHCP server enable mean it will assign IP address for users. DHCP Client IP DHCP Client IP DHCP Client IP mean the IP address range assigned by DHCP Server. DHCP Lease Time The networking device get IP lease time from DHCP server.

B. WAN Settings:

In this part, configure the WAN networking mainly.

AP Managemen	t Status	Network Firew	all Storage/Server	Management	Help
LAN Settings	WAN Settings	Cloud Settings	Authentication Setting	Local Authentication Management	English 🗸
WAN Setting					
			N Setting Dynamic IP		
Dynamic IP			Static IP		
Set DNS Manu			Disable		
			mary DNS 8 .8	.8	
			dary DNS 4 . 4	.4	
Advanced	Settings				
					Apply

Advanced Settings		
	MTU 1500 (1000-1500)	
MAC Clone	Scan MAC	
Enable uPNP		
Enable IGMP proxy		
Enable Ping Access on WAN		
Enable Web Server Access on WAN Port.	1080 (Port Range 1-65535)	
Enable IPsec pass through on VPN connect		
Enable PPTP pass through on VPN connection		
Enable L2TP pass through on VPN connect		
		Apply

Dynamic IP:

WAN interface obtains IP and DNS information through DHCP mode.

PPPOE(ADSL):

WAN interface obtains IP and DNS information via PPPOE dial-up mode.

Static IP: Set IP and DNS information for WAN interface manual

PPTP:

WAN interface obtains IP and DNS information via PPTP mode

MAC Clone:

Specifies the WAN interface MAC, by clicking [Search MAC Address] button, and then will pop up a connected device's MAC, select the MAC desired to clone. You can manually specify the MAC

Enable IGMP Proxy: Enables IGMP proxy, this feature can be forwarded IGMP data from WAN to the LAN

Enable Ping Address on WAN: This feature allows outer net to ping WAN

Enable Web Server Address on WAN port Enable this feature, allows to manage AC3000 from outer net via a specified remote management port

C. Cloud Setting:

Make this AC controller to connect with cloud server for captive portal authentication. Pls note: AC controller can access into cloud server in Gateway operation mode; Cloud server should support wifidog.

Cloud Server Setting: Enable or Disable. Cloud Server: Input the cloud server's IP address or domain name. Login Name: mean the account name in this cloud server. Contact infomation: pls input if have.

D. Authentication settings and local authentication management.Make authetnication through the cloud server.For this part, pls refer to the authentication user manual.

Chapter 5 Firewall

5.1 IP/Port Filtering

IP/Port Filtering

IP/Port forwarding enable, router will limited the data forwarding according to the filtering rule. If the filtering rule is [refuse], then the router will refuse to forward the data in accordance with filtering rule.; If the filtering rule is [allow], the router will forward the data in accordance with filtering rule.

IP Range Set IP address range Protocol Set filtering rule protocol Port Range Set filtering port range Mask A simple description of the entry rules, for user's easly management;

5.2 MAC Filtering

Intelligent Wir	eless AP Management	Platform	
AP Management Status Net	twork Firewall Storage/Server Man	nagement	🕐 Help
IP/Port Filtering MAC Filtering	URL Filtering Port Forwarding DMZ Se	ottings	English 🗸
MAC Filtering	Close Drop MAC Filtering Accept MAC	- Scan MAC	_
			Max rule counts : 200 Add Delete Cancel Apply
MAC			

MAC Filtering

Enabling Mac filtering, router will restrict data forwarding based on the selected filtering rules; When selected Close, router will decline the pointed incoming data; When selected as Open, then router will allow the pointed incoming rules;

Mac address

Set up rules in mac address, users can click Searching Mac Address from the clients in routers, or can set up the mac address manually;

Mask

A simple description of the entry rules, for user' s easier management;

5.3 URL Filtering

Intelligent Wireless AP Management Platform							
AP Management Status Netwo	ork Firewall Storage/Server Management	🔞 Help	,				
IP/Port Filtering MAC Filtering	IRL Filtering Port Forwarding DMZ Settings	English	~				
URL Filtering	Close URL Filtering Drop URL						
		Max rule counts : 200 Add Delete Cancel Ap	ply				
URL							

URL Filtering

Enabling URL filtering, router will restrict access to the pointed URL; URL address Set up the declined URL address

5.4 Port Forwarding

Intelligent Wireles	ss AP Management Plat	form				
AP Management Status Network	Firewall Storage/Server Management	t			0	Help
IP/Port Filtering MAC Filtering URL F	Filtering Port Forwarding DMZ Settings				English	~
Port Forwarding						
	Rule Type User-defined					
	Rule Name					
	Lan IP <mark>192 . 168 . 10 .</mark>		The IP of the computer connected(192.16	8.10.57)		
	External Port - (Range 1-65535)					
	Internal Port - (Range 1-65535)					
	Protocol TCP 💙					
				Max rule counts : 200 A	dd Delete	Cancel
Rule Name	Forward IP	Protocol	External Port	Internal Port		

Port forwarding

Port forwarding is to forward data from one port to another port, enabling external users have access to an internal private IP in LAN, from an external triggered NAT router ; Rule Type Set up rule type, which have specific port number; Rule name Port forwarding rule name LAN IP IP of the port forwarding External port External port External port Internal port number of port forwarding Internal port Internal port number of port forwarding Protocol Protocol used for port forwarding

5.5 DMZ Settings

Intelligent Wireless AP Management Platform	
AP Management Status Network Firewall Storage/Server Management	🕐 Help
IP/Port Filtering MAC Filtering URL Filtering Port Forwarding DMZ Settings	English 🗸
DMZ Setting	_
DMZ Setting DMZ V	
LAN IF 192 . 168 . 10 . The IP of the computer connected(192.168.10.57)	
	Apply

DMZ

DMZ is short for demilitarized zone; It' s a compartment between security zone and non-security zone, in order to solve the problem of external network can not access into internal server after firewall installation; This DMZ zone is a small network zone between external and internal network; While in this small zone, users usually place some open server, like web server, FTP server, or forum; DMZ will protect internal network more efficiently, because this network allocation is another obstacle for hackers, compared to normal firewall

IP LAN IP IP address of DMZ host

Chapter 6Storage/Server

Before use the storage function, pls make sure insert the USB disk into router, then click Storage, following picture will be showed, there are USB Disk, SAMBA Settings, DLNA settings for choose

A.USB Disk: When insert the USB disk to router's USB port, then will appear following page show the files directory path and partitions name.User can add/delete the files.

B. SAMBA function

We can share the files in USB disk to public users through SAMBA server Click SAMBA Settings, then set user name and passwords in wireless router, then apply.

C. DLNA function

User can build a DLNA server through this function. It work with mobile phone or other device support DLNA, then share the files in the local internet.

Chapter 7 Device management

7.1 System management

Intelligent Wireless AP Management Platform

Note:

This device complies with Part 15 of the FCC Rules.

Operation is subject to the following two conditions:

(1) this device may not cause harmful interference, and
(2) this device must accept any interference received, including interference that may cause undesired operation.

FCC (additional information)

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

-Reorient or relocate the receiving antenna.

-Increase the separation between the equipment and receiver.

-Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

-Consult the dealer or an experienced radio/TV technician for help.

Caution: Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.
