# TEST REPORT

Reference No. ..... : WTS18S12132461W

FCC ID ..... : 2AE67-CR-2701

Applicant .....: Bulk Unlimited Corp

Address ...... : 199 Lee Ave. Suite 464, BROOKLYN, NY, NEW YORK, United States

Manufacturer ...... : Shenzhen SeeMeHere Electronic Co., Ltd

1st Floor, 2nd Floor, 3rd Floor, 5th Floor, Building B, TongFuYu

Hangcheng Street, Bao'an district, Shenzhen

Product Name .....: Party Box Karaoke

Model No. ..... : CR-2701

Standards.....: FCC CFR47 Part 74

Date of Receipt sample..... : 2018-11-15

Date of Test...... : 2018-11-16 to 2018-12-14

Date of Issue ..... 2018-12-14

Test Result ..... : Pass

#### Remarks:

The results shown in this test report refer only to the sample(s) tested, this test report cannot be reproduced, except in full, without prior written permission of the company. The report would be invalid without specific stamp of test institute and the signatures of compiler and approver.

### 2 Laboratories Introduction

Waltek Services (Shenzhen) Co., Ltd is a professional third-party testing and certification laboratory with multi-year product testing and certification experience, established strictly in accordance with ISO/IEC 17025 requirements, and accredited by ILAC (International Laboratory Accreditation Cooperation) member. A2LA (American Association for Laboratory Accreditation, the certification number is 4243.01) of USA, CNAS (China National Accreditation Service for Conformity Assessment, the registration number is L3110) of China.Meanwhile, Waltek has got recognition as registration and accreditation laboratory from EMSD (Electrical and Mechanical Services Department), and American Energy star, FCC(The Federal Communications Commission), CEC(California energy efficiency), ISED (Innovation, Science and Economic Development Canada). It's the strategic partner and data recognition laboratory of international authoritative organizations, such as Intertek(ETL-SEMKO), TÜV Rheinland, TÜV SÜD, etc.

Waltek Services (Shenzhen) Co., Ltd is one of the largest and the most comprehensive third party testing laboratory in China. Our test capability covered four large fields: safety test. ElectroMagnetic Compatibility(EMC), and energy performance, wireless radio. As a professional, comprehensive, justice international test organization, we still keep the scientific and rigorous work attitude to help each client satisfy the international standards and assist their product enter into globe market smoothly.

# 3 Test Summary

Test Items	Test Requirement	Test Method	Result
RF Ourput Power	74.861(e)(1)(ii)	ANSI/TIA-603-E:2016	PASS
Modulation Characteristics	2.1047(a)	ANSI/TIA-603-E:2016	N/A
Occupied Bandwidth	2.1049(c)(1)	ANSI/TIA-603-E:2016	PASS
Radiated Emissions	2.1053 & 74.861(e)(6)	ANSI/TIA-603-E:2016	PASS
Spurious emissions at antenna terminals	2.1051	ANSI/TIA-603-E:2016	PASS
Frequencies Stability	2.1055(a)(1)	ANSI/TIA-603-E:2016	PASS
RF Exposure	1.1307(b)(1)	KDB 447498 D01	PASS

### Remark:

PASS means that the test results complies with related requirements.

N/A means that the test is not applicable for the EUT.

# 7 RF Output power

Test requirement: FCC CFR47 Part 74 Section 74.861(e)(1)(ii)

Test method: Based on ANSI/TIA-603-E:2016

Limit: According to Part 74.861(e)(1)(ii), the EIRP shall not exceed 250mW

(23.98 dBm).

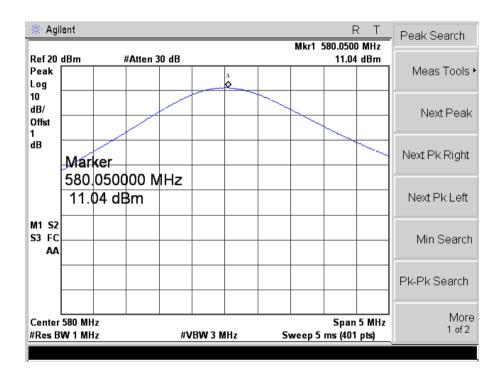

#### 7.1 Test Procedure

The maximum peak output power was measured with a spectrum analyzer connected to the antenna terminal (conducted measurement) while EUT was operating in normal situation.

#### 7.2 Test result

Channel	Frequency (MHz)	RF Stage Voltage (Vdc)	Collected Current (mA)	Output Power (dBm)	Limit (dBm)
/	580	3.7	0.35	11.04	24

Please refer to following plot:

### **8** Modulation Characteristics

Test requirement: FCC CFR47 Part 2 Section 2.1047(a)

Test method: Based on ANSI/TIA-603-E:2016

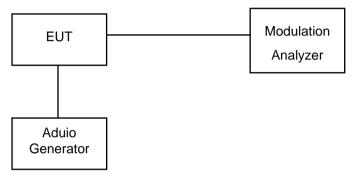

Requirement: According to Part 2.1047(a), for Voice Modulated Communication

Equipment, the frequency response of the audio modulating circuit

over a range of 100Hz to 5000Hz shall be measured.

#### 8.1 Test Procedure

(a) Test Configuration

- (b) Audio Frequency Response:
  - 1) Apply a 1000 Hz tone and adjust the audio frequency generator to produce 20% of the rated system deviation.
  - Set the test receiver to measure rms deviation and record the deviation reading as DEV<sub>REF</sub>.
  - 3) Set the audio frequency generator to the desired test frequency between 100 Hz and 5000 Hz.
  - 4) Record the test receiver deviation reading as DEV<sub>FREQ</sub>.
  - Calculate the audio frequency response at the present frequency as: audio frequency response =20lg(DEV<sub>FREQ</sub>/ DEV<sub>REF</sub>)
  - 6) Repeat steps 4) through5) for all the desired test frequencies.
- (c) Modulation Limiting:
  - 1) Apply a 1000 Hz modulating signal to the transmitter from the audio frequency generator, and adjust the level to obtain 60% of full rated system deviation.
  - 2) Measure both the instantaneous and steady-state deviation at and after the time of increasing the audio input level.
  - 3) With the level from the audio frequency generator held constant at the level. obtained in step e), slowly vary the audio frequency from 300 Hz to 3000.

Hz and observe the steady-state deviation. Record the maximum deviation.

- 4) Set the test receiver to measure peak negative deviation and repeat steps 1) through 3).
- 5) The values recorded in steps 3) and 4) are the modulation limiting.

Reference No.: WTS18S12132461E Page 11 of 22

# 8.2 Test Result

Not Application. The product only support digital modulation mode.

Reference No.: WTS18S12132461E Page 12 of 22

# 9 Occupied Bandwidth of Emission

Test requirement: FCC CFR47 Part 2 Section 2.1049©(1)

Test method: Based on ANSI/TIA-603-E:2016

Limit: According to FCC 74.861 (e)(5), the frequency emission

bandwidth shall not exceed 200 kHz.

#### 9.1 Test Procedure

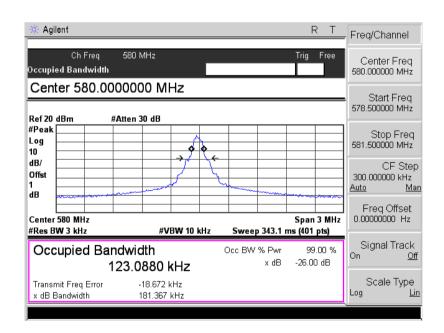

1. Check the calibration of the measuring instrument using either an internal calibrator or a known signal from an external generator.

2. Turn on the EUT and set it to any one convenient frequency within its operating range.

### 9.2 Test Result

Frequency	99% Bandwidth	Limit	Result
(MHz)	(kHz)	(kHz)	
580.00	123.088	200	PASS

Test Plot:

Reference No.: WTS18S12132461E Page 13 of 22

### 10 Spurious Emissions at Antenna Terminals

Test requirement: FCC CFR47 Part 2 Section 2.1053
Test method: Based on ANSI/TIA-603-E:2016

Limit: According to Part 74.861 (e)(6), the mean power of emissions shall be

attenuated below the mean output power of the transmitter in

accordance with the following schedule:

(i) on any frequency removed from the operating frequency by more than 50 percent up to and including 100 percent of the authorized

bandwidth: at least 25 dB.

(ii) on any frequency removed from the operating frequency by more than 100 percent up to and including 250 percent of the authorized

bandwidth: at least 35 dB.

(iii) on any frequency removed from the operating frequency by more

than 250 percent up to and the authorized bandwidth shall be attenuated below the un-modulated carrier by at least 43 + 10 Log

(output power in watts)dB.

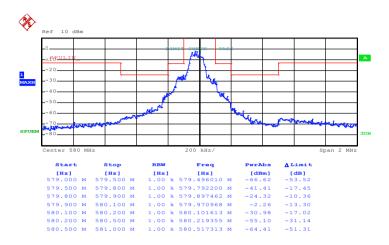

### 10.1 Test Procedure

- 1. Turn on the EUT and connect its antenna terminal to measurement instrument via a low loss cable. Then set it to any one measured frequency within its operating range, and make sure the instrument is operated in its linear range.
- 2. Set the SA on Max-Hold Mode, and then keep the EUT in transmitting mode. Record all the signals from each channel until each one has been recorded.
- 3. Set the SA on View mode and then plot the result on SA screen.
- 4. Repeat above procedures until all frequencies measured were complete.

Reference No.: WTS18S12132461E Page 14 of 22

### 10.2 Test Data

#### **Emission Mask Low Channel**

Reference No.: WTS18S12132461E Page 15 of 22

### 11 Radiated Emission Test

Test requirement: FCC CFR47 Part 2 Section 2.1053
Test method: Based on ANSI/TIA-603-E:2016

Limit: According to Part 74.861 (e)(6), the mean power of emissions shall be

attenuated below the mean output power of the transmitter in

accordance with the following schedule:

(i) on any frequency removed from the operating frequency by more

than 50 percent up to and including 100 percent of the authorized

bandwidth: at least 25 dB.

(ii) on any frequency removed from the operating frequency by more

than 100 percent up to and including 250 percent of the authorized

bandwidth: at least 35 dB.

(iii) on any frequency removed from the operating frequency by more

than 250 percent up to and the authorized bandwidth shall be

attenuated below the un-modulated carrier by at least 43 + 10 Log

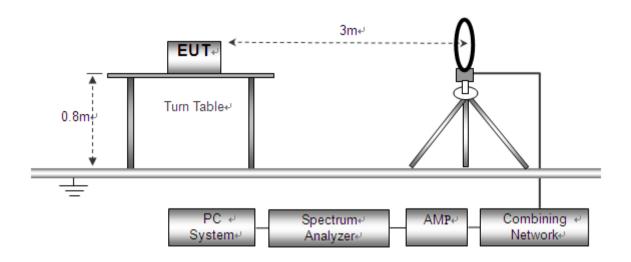

(output power in watts)dB.

### 11.1 EUT Setup

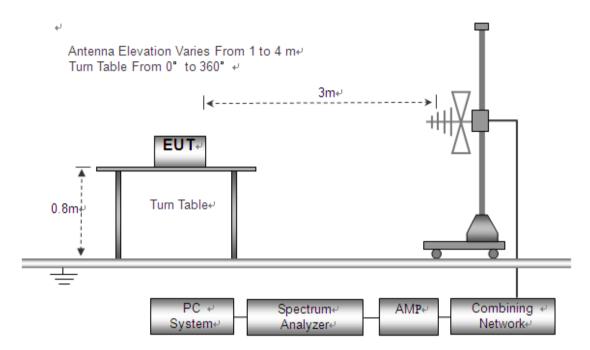

The radiated emission tests were performed in the 3m Semi- Anechoic Chamber test site, using the setup accordance with the ANSI C63.4

The test setup for emission measurement below 30MHz.

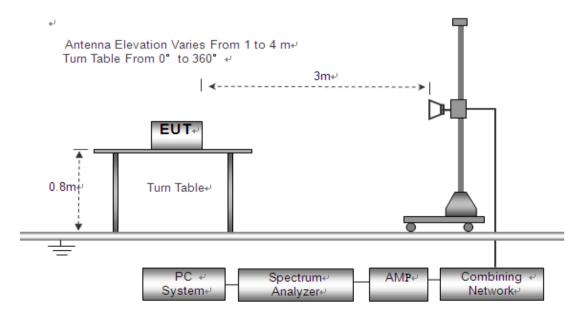

Turn Table From 0° to 360° ↔

The diagram below shows the test setup that is utilized to make the measurements for emission from 30 MHz to 1 GHz Emissions.

The diagram below shows the test setup that is utilized to make the measurements for emission above 1GHz Emissions.

### 11.2 Spectrum Analyzer Setup

According to FCC Part 2 Section 2.1053 Rules, the system was tested 9KHz to 6000MHz.

Below 30MHz	
Sweep Speed	Auto
IF Bandwidth	10kHz
Video Bandwidth	10kHz
Resolution Bandwidth	10kHz
30MHz ~ 1GHz	
Start Frequency	30 MHz
Stop Frequency	1000MHz
Sweep Speed	Auto
IF Bandwidth	120 KHz
Video Bandwidth	300KHz
Quasi-Peak Adapter Bandwidth	120 KHz
Quasi-Peak Adapter Mode	Normal
Resolution Bandwidth	100KHz
Above 1GHz	
Start Frequency	1000 MHz
Stop Frequency	7000MHz
Sweep Speed	Auto
IF Bandwidth	120 KHz
Video Bandwidth	3MHz
Quasi-Peak Adapter Bandwidth	120 KHz
Quasi-Peak Adapter Mode	Normal
Resolution Bandwidth	1MHz

#### 11.3 Test Procedure

- 1. Place the transmitter to be tested on the turntable in the standard test site. The transmitter is Transmitting into a non-radiating load, which is placed on the turntable.
- 2. The output of the antenna was connected to the measuring receiver and a peak detector was used for the measurement as indicated on the report.
- 3. The transmitter was switched on; if possible, without the modulation and the measurement receiver shall be tuned to the frequency of the transmitter under test.
- 4. The test antenna shall be raised and Lowed through the specified range of height until the measuring receiver detects a maximum signal level.
- 5. The transmitter shall than be rotated through 360° in the horizontal plane, until the maximum signal level is detected by the measuring receiver.
- 6. The test antenna shall be raised and Lowed again through the specified range of height until the measuring receiver detects a maximum signal level.
- 7. The maximum signal level detected by the measuring receiver shall be noted.
- 8. The measurement shall be repeated with the test antenna set to horizontal polarization.

Reference No.: WTS18S12132461E Page 18 of 22

9. Replace the antenna with a proper antenna (substitution antenna).

10. The substitution antenna shall be oriented for vertical polarization and, if necessary, the length of the substitution antenna shall be adjusted to correspond to the frequency of transmitting.

- 11. The substitution antenna shall be connected to a calibrated signal generator.
- 12. If necessary, the input attenuator setting of the measuring receiver shall be adjusted in order to increase the sensitivity of the measuring receiver.
- 13. The test antenna shall be raised and Lowed through the specified range of the height to ensure that the maximum signal is received.
- 14. The input signal to substitution antenna shall be adjusted to the level that produces a level detected by the measuring receiver, that is equal to the level noted while the transmitter radiated power was measured, corrected for the change of input attenuation setting of the measuring receiver.
- 15. The input level to the substitution antenna shall be recorded as power level in dBm, corrected for any change of input attenuator setting of the measuring receiver.
- 16. The measurement shall be repeated with the test antenna and the substitution antenna oriented for horizontal polarization.
- 17. The radiation emission was tested under 3-axes(X,Y,Z) position(X denotes lying on the table, Y denotes side stand and Z denotes vertical stand), After pre-test, It was found that the worse radiation emission was get at the X position. So the data shown was the X position only.
- 18. The EUT was under working mode during the final qualification test and the configuration was used to represent the worst case results.

Reference No.: WTS18S12132461E Page 19 of 22

#### 11.4 Test Result

Test Frequency: 9kHz ~ 30MHz

The measurements were more than 20 dB below the limit and not reported.

**Test Frequency: 30MHz ~ 5GHz** 

Frequency	Detector	Ant.	Antenna Turntable Height Angle		Emission Level	Limit	Margin
(MHz)		Pol	(m)	(°)	(dBm)	(dBm)	(dB)
295.1469	Peak	Н	1.5	125	-54.10	-13.00	-41.10
531.9635	Peak	V	1.5	136	-47.27	-13.00	-34.27
1158.266	Peak	Н	1.5	142	-25.66	-13.00	-12.66
1158.266	Peak	V	1.5	254	-29.73	-13.00	-16.73
1739.597	Peak	Н	1.5	252	-19.60	-13.00	-6.60
1739.597	Peak	V	1.5	36	-23.58	-13.00	-10.58
2321.299	Peak	Н	1.5	45	-27.17	-13.00	-14.17
2321.299	Peak	V	1.5	258	-35.76	-13.00	-22.76

The measurements not record were more than 20 dB below the limit and not reported.

Reference No.: WTS18S12132461E Page 20 of 22

# 12 Frequency Stability

Test requirement: FCC CFR47 Part 2 Section 2.1055(a)(a)

Test method: Based on ANSI/TIA-603-E:2016

Limit: According to FCC 74.86(e)(4), the frequency tolerance of the

transmitter shall be 0.005 percent.

### 12.1 Test Configuration

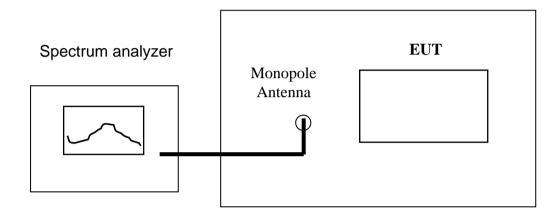

Figure 1

#### 12.2 Test Procedure

#### A) Frequency stability versus input voltage

- 1. Setup the configuration per figure 1 for frequencies measured at an environmental chamber whose temperature is set to 20 °C. Install new batteries in the EUT.
- 2. Set SA center frequency to the EUT operation frequency. Then set SA RBW to 30 kHz, VBW to 100kHz and frequency span to 500 kHz. Record this frequency to be a reference.
- 3. Vary primary supply voltage from 85 to 115 percent of the nominal value for other than hand carried battery equipment.

#### B) Frequency stability versus environmental temperature

- Setup the configuration per figure 1 for frequencies measured at an environmental chamber, Install new batteries in the EUT.
- 2. Turn on EUT and set SA center frequency to the EUT operation frequency, then set SA RBW to 30kHz, VBW to 100kHz and frequency span to 500 kHz. Record this frequency to be a reference.
- 3. Set the temperature of chamber to 50°C. Allow sufficient time (approximately 30 min) for the temperature of the chamber to stabilize. While maintaining a constant temperature inside the chamber, turn the EUT on and measure the EUT operating frequency.
- 4. Repeat step 2 with a 10°C decreased per stage until the lowest temperature -30°C is measured, record all measurement frequencies.

### 12.3 Test Result

a) Frequency stability versus input voltage

Power Supply	Reference Frequency (MHz)	Environment Temperature (°C)	Frequency Measured	Frequency Tolerance (%)	
3.7V,DC	580.00	20	580.005	0.00086	
3.5V,DC	580.00	20	580.008	0.00138	
4.2V,DC	580.00	20	580.010	0.00172	

### b) Frequency stability versus environmental temperature

Limit: 0.005%					
Environment Temperature (°C)	Power Supply	Frequency Deviation measured with time Elapse(30 minutes)			
50	3.7V,DC	580.013	0.00224		
40	3.7V,DC	580.014	0.00241		
30	3.7V,DC	580.013	0.00224		
20	3.7V,DC	580.022	0.00379		
10	3.7V,DC	580.016	0.00276		
0	3.7V,DC	580.014	0.00241		
-10	3.7V,DC	580.014	0.00241		
-20	3.7V,DC	580.005	0.00086		
-30	3.7V,DC	580.008	0.00138		

Test Result: The max frequency tolerance rating is 0.00379 % < 0.005%. Passed.

Reference No.: WTS18S12132461E Page 22 of 22

# 13 RF Exposure

Test Requirement: FCC Part 1.1307

Evaluation Method 447498 D01 General RF Exposure Guidance v06

### 13.1 Requirements

1) The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances ≤50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW)/(min. test separation distance, mm)]  $\cdot [\sqrt{f(GHz)}] \le 3.0$  for 1-g SAR and  $\le 7.5$  for 10-g extremity SAR where

- 1. f(GHz) is the RF channel transmit frequency in GHz
- 2. Power and distance are rounded to the nearest mW and mm before calculation
- 3. The result is rounded to one decimal place for comparison

The test exclusions are applicable only when the minimum test separation distance is ≤50 mm and for transmission frequencies between 100 MHz and 6 GHz. When the minimum test separation distance is < 5 mm, a distance of 5 mm is applied to determine SAR test exclusion.

### 13.2 The procedures / limit

Frequenc y (GHz)	conducted power (dBm)	conducted power (mW)	<b>Duty</b> cycle	Source- based time- averaged maximum conducted output power (mW)	Minimum test separatio n distance required for the exposure conditions (mm)	Computed value	SAR Test Exclusion Thresholds(mW )
0.580125	11.04	12.71	1.00	12.71	5	1.9	3

Remark: Max. duty factor is 100% Calculation formula: Source-based time-averaged maximum conducted output power(mW) = Conducted peak power(mW)\*Duty factor
