FCC ID: 2AEAN391001

In reply to questions 1 and 3.

1. The label on both units is permanently glued to the mechanical rear housing of the unit. The rear housing can slide to a certain point but it is not detachable from the main body of the unit so is a permanent part of the equipment enclosure.
3. We can attest that the software upgrade on both units only allows for user interface details and graphics changes and has no effect on the technical parameters reported here.

Many thanks,

Andrew
