# **WaveLynx Technologies Corporation**

ADDENDUM TO EMC TEST REPORT 96495-13B

Ethos Model: Ethos U7

**Tested To The Following Standards:** 

FCC Part 15 Subpart C Section(s) 15.207, 15.209 & 15.225

Report No.: 96495-13C

Date of issue: October 8, 2015

This test report bears the accreditation symbol indicating that the testing performed herein meets the test and reporting requirements of ISO/IEC 17025 under the applicable scope of EMC testing for CKC Laboratories, Inc.

We strive to create long-term, trust based relationships by providing sound, adaptive, customer first testing services. We embrace each of our customers' unique EMC challenges, not as an interruption to set processes, but rather as the reason we are in business.

This report contains a total of 45 pages and may be reproduced in full only. Partial reproduction may only be done with the written consent of CKC Laboratories, Inc.

# **ADMINISTRATIVE INFORMATION**

## **Test Report Information**

### **REPORT PREPARED FOR:**

WaveLynx Technologies Corporation 12303 Airport Way, Suite 200 Broomfield, CO 80021 **REPORT PREPARED BY:** 

Joyce Walker CKC Laboratories, Inc. 5046 Sierra Pines Drive Mariposa, CA 95338

Representative: Mike Conlin

Project Number: 96495

DATE OF EQUIPMENT RECEIPT: DATE(S) OF TESTING: January 15, 2015 January 15 - 20, 2015 and September 8, 2015

## **Revision History**

**Original:** Testing of Ethos, Models: Ethos U6 and Ethos U7 to FCC Part 15 Subpart C Section(s) 15.207, 15.209 & 15.225.

Addendum A: To correct a typo of the operating frequency on page 37 in the Radiated Spurious test conditions. Addendum B: Replaced the OBW plots on pages 23 and 32.

Addendum C: Replaces all references of Ethos U6 with Ethos U7 and removed the equivalency reference to other models.

## **Report Authorization**

The test data contained in this report documents the observed testing parameters pertaining to and are relevant for only the sample equipment tested in the agreed upon operational mode(s) and configuration(s) as identified herein. Compliance assessment remains the client's responsibility. This report may not be used to claim product endorsement by A2LA or any government agencies. This test report has been authorized for release under quality control from CKC Laboratories, Inc.

Steve Behm Director of Quality Assurance & Engineering Services CKC Laboratories, Inc.

## **Test Facility Information**

Our laboratories are configured to effectively test a wide variety of product types. CKC utilizes first class test equipment, anechoic chambers, data acquisition and information services to create accurate, repeatable and affordable test results.

TEST LOCATION(S): CKC Laboratories, Inc. 5046 Sierra Pines Drive Mariposa, CA 95338

## **Software Versions**

CKC Laboratories Proprietary Software	Version
EMITest Emissions	5.00.14
Immunity	5.00.07

## Site Registration & Accreditation Information

Location	CB #	TAIWAN	CANADA	FCC	JAPAN
Mariposa A	US0103	SL2-IN-E-1147R	3082A-2	90477	A-0136

## SUMMARY OF RESULTS

### Standard / Specification: FCC Part 15 Subpart C

Test Procedure	Description	Modifications*	Results					
	125kHz Transmitter							
15.207	Conducted Emissions	NA	Pass					
15.209	Radiated Emissions	NA	Pass					
15.209(a)	Fundamental Field Strength	NA	Pass					
15.215(c)	20dB Occupied Bandwidth	NA	Pass					
	13.56MHz Transmitter		1					
15.207	Conducted Emissions	NA	Pass					
15.215(c)	20dB Occupied Bandwidth	NA	Pass					
15.225(a)	Fundamental Field Strength	NA	Pass					
15.225(d)(b)	Radiated Spurious Emissions/Emissions Masks	NA	Pass					
15.225(e)	Frequency Stability	NA	Pass					

## **Modifications\* During Testing**

This list is a summary of the modifications made to the equipment during testing.

### Summary of Conditions

No modifications were made during testing.

## **Conditions During Testing**

This list is a summary of the conditions noted to the equipment during testing.

Summary of Conditions

None

## **EQUIPMENT UNDER TEST (EUT)**

### **EQUIPMENT UNDER TEST**

### <u>Ethos</u>

Manuf: Wavelynx Technologies Corporation Model: Ethos U7 Serial: Eng002

### **PERIPHERAL DEVICES**

The EUT was tested with the following peripheral device(s):

### AC-DC Adapter

Manuf: LG Model: MCS-01WD Serial: None

# FCC PART 15 SUBPART C

# 125kHz Transmitter

## **15.207 AC Conducted Emissions**

### **Test Data**

Test Location: CKC Laboratories, Inc. • 5046 Sierra Pines Dr. • Mariposa, CA 95338 • (209) 966-5240

Customer:	WaveLynx Technologies Corporation		
Specification:	15.207 AC Mains - Average		
Work Order #:	96495	Date:	1/20/2015
Test Type:	Conducted Emissions	Time:	4:18:32 PM
Equipment:	Ethos	Sequence#:	5
Manufacturer:	Wavelynx Technologies Corporation	Tested By:	Eddie Mariscal
Model:	Ethos U7		120V 60Hz
S/N:	Eng002

### Test Conditions / Notes:

The EUT is placed at the center of a 40' diameter turntable operating at 125kHz, configured to continuously transmit.

The EUT is powered with +5VDC via USB cable through support AC-DC converter.

Frequency Range of Interest: 0.15-30MHz RBW = 9kHz; VBW > RBW

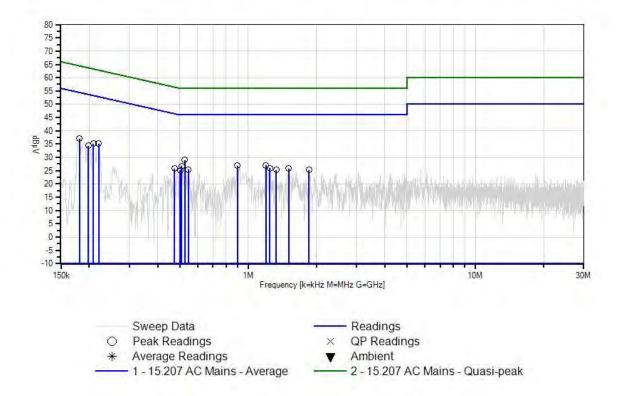

Environmental Conditions: Temperature: 19°C Relative Humidity: 43% Atmospheric Pressure: 97.8kPa

#### Test Conditions / Notes:

The EUT is placed at the center of a 40' diameter turntable operating at 13.56MHz, configured to continuously transmit. The EUT was investigated about three orthogonal axes. The measurement antenna was rotated about its vertical axis to maximize EUT emissions measurements. The data presented represents the worst-case orientation.

The voltage was varied in accordance with 15.31(e) and no variation in output power was detected.

# SUPPLEMENTAL INFORMATION

### **Measurement Uncertainty**

Uncertainty Value	Parameter
4.73 dB	Radiated Emissions
3.34 dB	Mains Conducted Emissions
3.30 dB	Disturbance Power

Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k=2.

### **Emissions Test Details**

### **TESTING PARAMETERS**

Unless otherwise indicated, the following configuration parameters are used for equipment setup: The cables were routed consistent with the typical application by varying the configuration of the test sample. Interface cables were connected to the available ports of the test unit. The effect of varying the position of the cables was investigated to find the configuration that produced maximum emissions. Cables were of the type and length specified in the individual requirements. The length of cable that produced maximum emissions was selected.

The equipment under test (EUT) was set up in a manner that represented its normal use, as shown in the setup photographs. Any special conditions required for the EUT to operate normally are identified in the comments that accompany the emissions tables.

The emissions data was taken with a spectrum analyzer or receiver. Incorporating the applicable correction factors for distance, antenna, cable loss and amplifier gain, the data was reduced as shown in the table below. The corrected data was then compared to the applicable emission limits. Preliminary and final measurements were taken in order to ensure that all emissions from the EUT were found and maximized.

#### **CORRECTION FACTORS**

The basic spectrum analyzer reading was converted using correction factors as shown in the highest emissions readings in the tables. For radiated emissions in dB $\mu$ V/m, the spectrum analyzer reading in dB $\mu$ V was corrected by using the following formula. This reading was then compared to the applicable specification limit.

SAMPLE CALCULATIONS							
	Meter reading (dBµV)						
+	Antenna Factor	(dB)					
+	Cable Loss	(dB)					
-	Distance Correction	(dB)					
-	Preamplifier Gain	(dB)					
=	Corrected Reading	(dBµV/m)					

### TEST INSTRUMENTATION AND ANALYZER SETTINGS

The test instrumentation and equipment listed were used to collect the emissions data. A spectrum analyzer or receiver was used for all measurements. Unless otherwise specified, the following table shows the measuring equipment bandwidth settings that were used in designated frequency bands. For testing emissions, an appropriate reference level and a vertical scale size of 10 dB per division were used.

MEASURING EQUIPMENT BANDWIDTH SETTINGS PER FREQUENCY RANGE							
TEST	BEGINNING FREQUENCY	ENDING FREQUENCY	BANDWIDTH SETTING				
CONDUCTED EMISSIONS	150 kHz	30 MHz	9 kHz				
RADIATED EMISSIONS	9 kHz	150 kHz	200 Hz				
RADIATED EMISSIONS	150 kHz	30 MHz	9 kHz				
RADIATED EMISSIONS	30 MHz	1000 MHz	120 kHz				
RADIATED EMISSIONS	1000 MHz	>1 GHz	1 MHz				

#### SPECTRUM ANALYZER/RECEIVER DETECTOR FUNCTIONS

The notes that accompany the measurements contained in the emissions tables indicate the type of detector function used to obtain the given readings. Unless otherwise noted, all readings were made in the "positive peak" detector mode. Whenever a "quasi-peak" or "average" reading was recorded, the measurement was annotated with a "QP" or an "Ave" on the appropriate rows of the data sheets. In cases where quasi-peak or average limits were employed and data exists for multiple measurement types for the same frequency then the peak measurement was retained in the report for reference, however the numbering for the affected row was removed and an arrow or carrot ("^") was placed in the far left-hand column indicating that the row above takes precedence for comparison to the limit. The following paragraphs describe in more detail the detector functions and when they were used to obtain the emissions data.

### <u>Peak</u>

In this mode, the spectrum analyzer or receiver recorded all emissions at their peak value as the frequency band selected was scanned. By combining this function with another feature called "peak hold," the measurement device had the ability to measure intermittent or low duty cycle transient emission peak levels. In this mode the measuring device made a slow scan across the frequency band selected and measured the peak emission value found at each frequency across the band.

#### Quasi-Peak

Quasi-peak measurements were taken using the quasi-peak detector when the true peak values exceeded or were within 2 dB of a quasi-peak specification limit. Additional QP measurements may have been taken at the discretion of the operator.

### Average

Average measurements were taken using the average detector when the true peak values exceeded or were within 2 dB of an average specification limit. Additional average measurements may have been taken at the discretion of the operator. If the specification or test procedure requires trace averaging, then the averaging was performed using 100 samples or as required by the specification. All other average measurements are performed using video bandwidth averaging. To make these measurements, the test engineer reduces the video bandwidth on the measuring device until the modulation of the signal is filtered out. At this point the measuring device is set into the linear mode and the scan time is reduced.
