# WaveLynx Technologies Corporation 

TEST REPORT FOR<br>Ethos<br>Models: ET10-1, ET10-3, ET10-5, and ET10-7

## Tested To The Following Standards:

FCC Part 15 Subpart C Sections:
15.207 \& 15.209

## Report No.: 97029-32

Date of issue: May 24, 2016

Testing Certificates: 803.01,803.02, 803.05, 803.06

This test report bears the accreditation symbol indicating that the testing performed herein meets the test and reporting requirements of ISO/IEC 17025 under the applicable scope of EMC testing for CKC Laboratories, Inc.

We strive to create long-term, trust based relationships by providing sound, adaptive, customer first testing services. We embrace each of our customers' unique EMC challenges, not as an interruption to set processes, but rather as the reason we are in business.

# ADMINISTRATIVE INFORMATION 

## Test Report Information

## REPORT PREPARED FOR:

WaveLynx Technologies Corporation
12303 Airport Way, Suite 200
Broomfield, CO 80021

REPRESENTATIVE: Daniel Field
Customer Reference Number: CKPO030916

DATE OF EQUIPMENT RECEIPT:
DATE(S) OF TESTING:

REPORT PREPARED BY:

Terri Rayle
CKC Laboratories, Inc.
5046 Sierra Pines Drive
Mariposa, CA 95338

Project Number: 97029

March 14, 2016
March 14 - May 10, 2016

## Report Authorization

The test data contained in this report documents the observed testing parameters pertaining to and are relevant for only the sample equipment tested in the agreed upon operational mode(s) and configuration(s) as identified herein. Compliance assessment remains the client's responsibility. This report may not be used to claim product endorsement by A2LA or any government agencies. This test report has been authorized for release under quality control from CKC Laboratories, Inc.

Steve Behm
Director of Quality Assurance \& Engineering Services CKC Laboratories, Inc.

## Test Facility Information

Our laboratories are configured to effectively test a wide variety of product types. CKC utilizes first class test equipment, anechoic chambers, data acquisition and information services to create accurate, repeatable and affordable test results.

TEST LOCATION(S):
CKC Laboratories, Inc.
5046 Sierra Pines Drive
Mariposa, CA 95338

## Software Versions

## SUMMARY OF RESULTS

Standard / Specification: FCC Part 15 Subpart C - $\mathbf{1 5 . 2 0 9}$

| Test Procedure | Description | Modifications | Results |
| :--- | :--- | :--- | :--- |
| $15.215(\mathrm{c})$ | Occupied Bandwidth | NA | Pass |
| 15.209 | Field Strength of Fundamental | NA | Pass |
| 15.209 | Field Strength of Spurious Emissions | NA | Pass |
| 15.207 | AC Conducted Emissions | NA | Pass |

NA = Not Applicable

## Modifications During Testing

This list is a summary of the modifications made to the equipment during testing.

## Summary of Conditions

No modifications were made during testing.

Modifications listed above must be incorporated into all production units.

## Conditions During Testing

This list is a summary of the conditions noted to the equipment during testing.

## Summary of Conditions

None

## EQUIPMENT UNDER TEST (EXT)

During testing numerous configurations may have been utilized. The configurations listed below support compliance to the standards) listed in the Summary of Results section.

## Configuration 1

Equipment Tested:

| Device | Manufacturer | Model \# | S/N |
| :--- | :--- | :--- | :--- |
| Ethos | WaveLynx Technologies <br> Corporation | ET10-1 | NA |

Support Equipment:

| Device | Manufacturer | Model \# | S/N |
| :--- | :--- | :--- | :--- |
| DC Power Supply | HP | 6205C | 2228A01775 |

## Configuration 3

Equipment Tested:

| Device | Manufacturer | Model \# | S/N |
| :--- | :--- | :--- | :--- |
| Ethos | WaveLynx Technologies <br> Corporation | ET10-3 | NA |

Support Equipment:

| Device | Manufacturer | Model \# | S/N |
| :--- | :--- | :--- | :--- |
| DC Power Supply | HP | 6205C | $2228 A 01775$ |

## Configuration 5

Equipment Tested:

| Device | Manufacturer | Model \# | S/N |
| :--- | :--- | :--- | :--- |
| Ethos | WaveLynx Technologies <br> Corporation | ET10-5 | NA |

Support Equipment:

| Device | Manufacturer | Model \# | S/N |
| :--- | :--- | :--- | :--- |
| DC Power Supply | HP | 6205 C | 2228A01775 |

## Configuration 7

Equipment Tested:

| Device | Manufacturer | Model \# | SN |
| :--- | :--- | :--- | :--- |
| Ethos | WaveLynx Technologies <br> Corporation | ET10-7 | NA |

Support Equipment:

| Device | Manufacturer | Model \# | S/N |

## FCC Part 15 Subpart C

### 15.215(c) Occupied Bandwidth (20dB BW)

## Test Setup/Conditions

| Test Location: | Mariposa Lab D | Test Engineer: | Benny Lovan |
| :--- | :--- | :--- | :--- |
| Test Method: | ANSI C63.10 (2013) | Test Date(s): | March 14-18, 2016 |
| Configuration: | $1,3,5$ and 7 |  |  |
| Test Setup: | Configuration 1 (125kHz Only) - Measured in X-Axis <br> Configuration 3 (Set for 125kHz) - Measured in Y-Axis <br> Configuration 5 (125 kHz Only) - Measured in Y-Axis <br> Configuration 7 (Set for 125kHz) - Measured in X-Axis <br> Antenna Type: Integral <br> Modulation: CW |  |  |

The EUT is powered by a DC power supply at 12 VDC .
Max power was measured in two orthogonalities.
The manufacturer declares it will only ever be wall mounted in an upright (Y-axis) or sideways (X-axis) orientation.

The OBW was performed in the worst case orientation observed during the fundamental power measurements.

The EUT is setup on an 80 cm foam block.
The EUT has been programmed to continuously transmit the RFID signal at 125 kHz .

## Test Conditions / Notes:

Radiated Emissions Fundamental Measurements

Temperature: $10^{\circ} \mathrm{C}$
Humidity:86\%
Atmospheric Pressure: 98.0 kPa
Method: ANSI C63.10 2013

Antenna Type: Integral
Modulation: CW
The EUT is powered by a DC power supply at 12 VDC .
Max power was measured in two orthogonalities.
125 kHz Only - Measured in X-Axis
The Fundamental measurements were performed in the worst case orientation observed during the fundamental power measurements.

The manufacturer declares it will only ever be wall mounted in an upright (Y-axis) or sideways (X-axis) orientation.

The EUT is setup on an 80 cm foam block.
The EUT has been programmed to continuously transmit the RFID signal at 125 kHz .
Measurements will be made in both orientations as well as with the voltage variation of 11.2 VDC and 13.8 VDC (+/-15\% of nominal).

## Test Conditions / Notes:

Radiated Emissions Fundamental Measurements
Temperature: $11^{\circ} \mathrm{C}$
Humidity: 85\%
Atmospheric Pressure: 100.8 kPa
Method: ANSI C63.10 2013
Antenna Type: Integral
Modulation: CW
The EUT is powered by a DC power supply at 12 VDC .
Max power was measured in two orthogonalities.
Set for $125 \mathrm{kHz}-$ Measured in X-Axis
The Fundamental measurements were performed in the worst case orientation observed during the fundamental power measurements.

The manufacturer declares it will only ever be wall mounted in an upright (Y-axis) or sideways (X-axis) orientation.

The EUT is setup on an 80 cm foam block. This EUT has both 125 kHz and 13.56 MHz .
The EUT has been programmed to continuously transmit the RFID signal at 125 kHz .
Measurements will be made in both orientations as well as with the voltage variation of 11.2 VDC and 13.8 VDC ( $+/-15 \%$ of nominal)..

## Test Conditions / Notes:

Radiated Emissions Spurious Measurements $9 \mathrm{kHz}-30 \mathrm{MHz}$
Temperature: $10.6^{\circ} \mathrm{C}$
Humidity: 62\%
Atmospheric Pressure: 98.2 kPa

Method: ANSI C63.10 2013

Highest Generated Frequency (Configuration 1): 8 MHz
Highest Generated Frequency (Configuration 3): 27.12 MHz

Both EUTs are running at 125 kHz .
The EUT is powered by a DC power supply at 12 VDC .
Spurious was measured on two EUTs at one time.
Configuration 8 is made up of Configuration 1 and Configuration 3 (Testing at the same time).
Configuration 1 is in X -axis and Configuration 3 is in the Y -axis.
Preliminary measurements of the fundamental were taken in two orientations. The orientation that displayed the highest emissions was the orientation used for radiated spurious emissions.

The manufacturer declares it will only ever be wall mounted in an upright (Y-axis) or sideways (X-axis) orientation.

The EUT is setup on an 0.80 meter foam block.
The EUT is setup to continuously transmit at 125 kHz

Test Conditions / Notes:
Radiated Emissions Spurious Measurements 30MHz -1GHz
Temperature: $10.5^{\circ} \mathrm{C}$
Humidity: 57\%
Atmospheric Pressure: 98.5 kPa

Method: ANSI C63.10 2013
Highest Generated Frequency (Configuration 5): 8 MHz
Highest Generated Frequency (Configuration 7): 27.12 MHz
Both EUTs are running at 125 kHz .

The EUT is powered by a DC power supply at 12VDC.
Spurious was measured on two EUTs at one time.
Configuration 9 is made up of Configuration 5 and Configuration 7 (Testing at the same time).
Configuration 5 is in Y -axis and Configuration -7 is in the X -axis.
Preliminary measurements of the fundamental were taken in two orientations. The orientation that displayed the highest emissions was the orientation used for radiated spurious emissions.

The manufacturer declares it will only ever be wall mounted in an upright (Y-axis) or sideways (X-axis) orientation.

The EUT is setup on an 0.80 meter foam block.
The EUT is setup to continuously transmit at 125 kHz

Date: 5/10/2016
Time: 10:04:57 AM
Sequence\#: 8
120 V 60 Hz

Equipment Tested:

| Device | Manufacturer | Model \# |
| :--- | :--- | :--- |
| Configuration 3 |  | S/N |

Support Equipment:

| Device | Manufacturer | Model \# |
| :--- | :--- | :--- |
| Configuration 3 |  | S/N |

Test Conditions / Notes:

| Test Method: ANSI C63.10 (2013) |
| :--- |
| Frequency Range of Interest: |
| $0.150-30 \mathrm{MHz}$ |
| RBW $=9 \mathrm{kHz}$; VBW $>9 \mathrm{kHz}$ |
| Environmental Conditions: |
| Temperature: $21^{\circ} \mathrm{C}$ |
| Relative Humidity: $67 \%$ |
| Atmospheric Pressure: 97.5 kPa |
|  |
| Highest Generated Frequency: 27.12 MHz |
| The EUT is running at 125 kHz . |
|  |
| The EUT is powered by a DC power supply at 12 VDC . |
| The EUT is setup to continuously transmit at 125 kHz . |
| AC Conducted Emissions is being performed on the AC portion of the AC/DC supply. |

## Test Setup Photos

## SUPPLEMENTAL INFORMATION

## Measurement Uncertainty

| Uncertainty Value | Parameter |
| :---: | :---: |
| 4.73 dB | Radiated Emissions |
| 3.34 dB | Mains Conducted Emissions |
| 3.30 dB | Disturbance Power |

Reported uncertainties represent expanded uncertainties expressed at approximately the $95 \%$ confidence level using a coverage factor of $\mathrm{k}=2$. Compliance is deemed to occur provided measurements are below the specified limits.

## Emissions Test Details

TESTING PARAMETERS
Unless otherwise indicated, the following configuration parameters are used for equipment setup: The cables were routed consistent with the typical application by varying the configuration of the test sample. Interface cables were connected to the available ports of the test unit. The effect of varying the position of the cables was investigated to find the configuration that produced maximum emissions. Cables were of the type and length specified in the individual requirements. The length of cable that produced maximum emissions was selected.

The equipment under test (EUT) was set up in a manner that represented its normal use, as shown in the setup photographs. Any special conditions required for the EUT to operate normally are identified in the comments that accompany the emissions tables.

The emissions data was taken with a spectrum analyzer or receiver. Incorporating the applicable correction factors for distance, antenna, cable loss and amplifier gain, the data was reduced as shown in the table below. The corrected data was then compared to the applicable emission limits. Preliminary and final measurements were taken in order to ensure that all emissions from the EUT were found and maximized.

## CORRECTION FACTORS

The basic spectrum analyzer reading was converted using correction factors as shown in the highest emissions readings in the tables. For radiated emissions in $\mathrm{dB} \mu \mathrm{V} / \mathrm{m}$, the spectrum analyzer reading in $\mathrm{dB} \mu \mathrm{V}$ was corrected by using the following formula. This reading was then compared to the applicable specification limit. Individual measurements were compared with the displayed limit value in the margin column. The margin was calculated based on the limit value subtracting the corrected measured value; a negative margin represents a measurement less than the limit while a positive margin represents a measurement exceeding the limit.

| SAMPLE CALCULATIONS |  |  |  |
| :--- | :--- | :--- | :---: |
|  | Meter reading | $(\mathrm{dB} \mu \mathrm{V})$ |  |
| + | Antenna Factor | $(\mathrm{dB} / \mathrm{m})$ |  |
| + | Cable Loss | $(\mathrm{dB})$ |  |
| - | Distance Correction | $(\mathrm{dB})$ |  |
| - | Preamplifier Gain | $(\mathrm{dB})$ |  |
| $=$ | Corrected Reading | $(\mathrm{dB} \mu \mathrm{V} / \mathrm{m})$ |  |

## TEST INSTRUMENTATION AND ANALYZER SETTINGS

The test instrumentation and equipment listed were used to collect the emissions data. A spectrum analyzer or receiver was used for all measurements. Unless otherwise specified, the following table shows the measuring equipment bandwidth settings that were used in designated frequency bands. For testing emissions, an appropriate reference level and a vertical scale size of 10 dB per division were used.

| MEASURING EQUIPMENT BANDWIDTH SETTINGS PER FREQUENCY RANGE |  |  |  |
| :---: | :---: | :---: | :---: |
| TEST | BEGINNING FREQUENCY | ENDING FREQUENCY | BANDWIDTH SETTING |
| CONDUCTED EMISSIONS | 150 kHz | 30 MHz | 9 kHz |
| RADIATED EMISSIONS | 9 kHz | 150 kHz | 200 Hz |
| RADIATED EMISSIONS | 150 kHz | 30 MHz | 9 kHz |
| RADIATED EMISSIONS | 30 MHz | 1000 MHz | 120 kHz |
| RADIATED EMISSIONS | 1000 MHz | $>1 \mathrm{GHz}$ | 1 MHz |

## SPECTRUM ANALYZER/RECEIVER DETECTOR FUNCTIONS

The notes that accompany the measurements contained in the emissions tables indicate the type of detector function used to obtain the given readings. Unless otherwise noted, all readings were made in the "positive peak" detector mode. Whenever a "quasi-peak" or "average" reading was recorded, the measurement was annotated with a "QP" or an "Ave" on the appropriate rows of the data sheets. In cases where quasi-peak or average limits were employed and data exists for multiple measurement types for the same frequency then the peak measurement was retained in the report for reference, however the numbering for the affected row was removed and an arrow or caret (" $\wedge$ ") was placed in the far left-hand column indicating that the row above takes precedence for comparison to the limit. The following paragraphs describe in more detail the detector functions and when they were used to obtain the emissions data.

## Peak

In this mode, the spectrum analyzer or receiver recorded all emissions at their peak value as the frequency band selected was scanned. By combining this function with another feature called "peak hold," the measurement device had the ability to measure intermittent or low duty cycle transient emission peak levels. In this mode the measuring device made a slow scan across the frequency band selected and measured the peak emission value found at each frequency across the band.

## Quasi-Peak

Quasi-peak measurements were taken using the quasi-peak detector when the true peak values exceeded or were within 2 dB of a quasi-peak specification limit. Additional QP measurements may have been taken at the discretion of the operator.

## Average

Average measurements were taken using the average detector when the true peak values exceeded or were within 2 dB of an average specification limit. Additional average measurements may have been taken at the discretion of the operator. If the specification or test procedure requires trace averaging, then the averaging was performed using 100 samples or as required by the specification. All other average measurements are performed using video bandwidth averaging. To make these measurements, the test engineer reduces the video bandwidth on the measuring device until the modulation of the signal is filtered out. At this point the measuring device is set into the linear mode and the scan time is reduced.
