7.2.6 Out of Band Rejection

Test Requirement:	Section D.3(l) of KDB 935210 D02 Signal Booster Certification v03r02 Test for rejection of out of band signals. Filter freq. response plots are acceptable.
Test Method:	KDB 935210 D05 Indus Booster Basic Meas v01r01
EUT Operation:	
Status:	Drive the EUT to maximum output power. .
Conditions:	Normal conditions
Application:	Cellular Band RF output ports
Test Configuration:	

Fig.4. Out of Band rejection test configuration

- Test Procedure:
1. Connect the equipment as illustrated;
 2. Test the background noise level with all the test facilities;
 3. Keep one transmitting path, all other connectors shall be connected by normal power or RF leads;
 4. Select the attenuator to avoid the test receiver or spectrum analyzer being destroyed;
 5. Keep the EUT continuously transmitting in max power;
 6. Signal generator sweep from the frequency more lower than the product frequency to the frequency more higher than it, find the product band filter characteristic;
 - CW signal rather than typical signal is acceptable (for FM).
 - Multiple band filter will need test each other.

7.2.6.1 Measurement Record:
Downlink: 869MHz to 894MHz

7.2.7 Frequency Stability

Test Requirement: FCC part 22.355

The frequency stability shall be sufficient to ensure that the fundamental emissions stay within the authorized bands of operation.

EUT Operation:

Status: Drive the EUT to maximum output power.

Conditions: Temperature conditions, voltage conditions

Application: Cellular Band RF output ports

Test Procedure:

1. Temperature conditions:
 - a) The RF output port of the EUT was connected to Frequency Meter;
 - b) Set the working Frequency in the middle channel;
 - c) Record the 20 °C and normal voltage frequency value as reference point;
 - d) Vary the temperature from -40 °C to 50 °C with step 10 °C
 - e) When reach a temperature point, keep the temperature balance at least 1 hour to make the product working in this status;
 - f) Read the frequency at the relative temperature.
2. Voltage conditions:
 - a) record the 20 °C and normal voltage frequency value as reference point;
 - b) vary the voltage from -15% normal voltage to +15% voltage;
 - c) Read the frequency at the relative voltage.
