

Product Difference Statement

The schematic and PCB of the two models BRN404 and BRN402 used by our company for the certification application is completely the same, the hardware and software used are the same. Because we use different SIM operators for each of them, we plan to use different model names for sales. the differences are as follows:

BRN402 uses chip SIM from Kore.

BRN404 uses chip SIM from Twilio.

Since Chip SIM is a passive component, it will not affect the performance of the product itself.

Hereby declare.
