

## Non-portable product declaration

Our Tracker product (ONE402M&ONE404M) is used in fleet management, cold chain management, Micro Mobility, heavy equipment monitoring, bus, rental heavy equipment location monitoring and other fields.

It is placed under the glass of the cab of the car , or where there is no metal obstruction above the EUT. Because metal objects will affect the GNSS antenna receiving satellite signals, you can charge the device through the M8 connector of the EUT or the USB-C interface. It is not a portable device.

Hereby declare.
