Wi-Fi

It has a build-in Wi-Fi , the iOS/Android device can connect to it by Wi-Fi.

The first step to use it is turning the Wi-Fi on.

"Setup Menu -> Wi-Fi -> On"

Secondly, in your iOS/Android device's Wi-Fi setting, connect the smart device to our device.

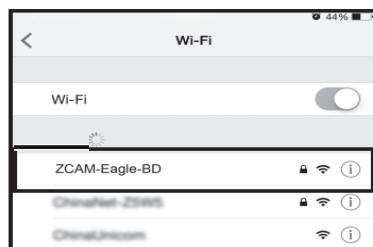

The default SSID would be "ZCAM-Eagle-xxxx", you can change the SSID to the name you want in the App. Also, the password of the Wi-Fi can be changed in the App.

Once the smart device is connected to the camera, you can use the Z Camera App to do the following job:

- Watch the low delay live streaming from the camera
- Take a video shot or still capture
- Change the camera settings
- Download the video/photo to iOS/Android device
- Manage the files on camera
- Share the photos with your friend

Connecting a Mobile Phone to the Camera's Wi-Fi

1) Tap your mobile phone's "settings" icon and then Wi-Fi. Select the camera's Wi-Fi name.

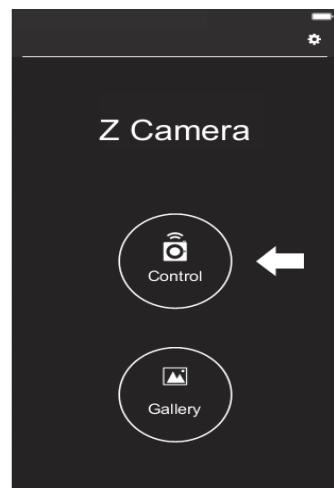

2) Enter the camera's default Wi-Fi passcode: "12345678". Your mobile phone should be connected to the camera's Wi-Fi now.

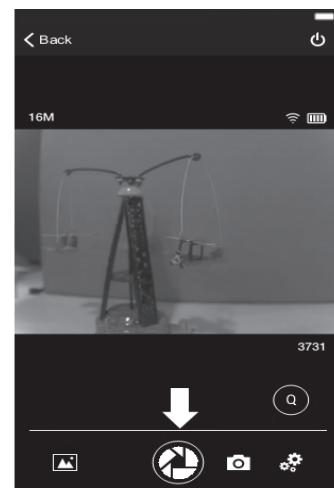

Mobile phone control Shooting

Frame your subject. Once the mobile phone App has been installed and the phone is connected to the camera's Wi-Fi, open the main page of the APP.

1) Tap the "Control" icon to enter shooting interface

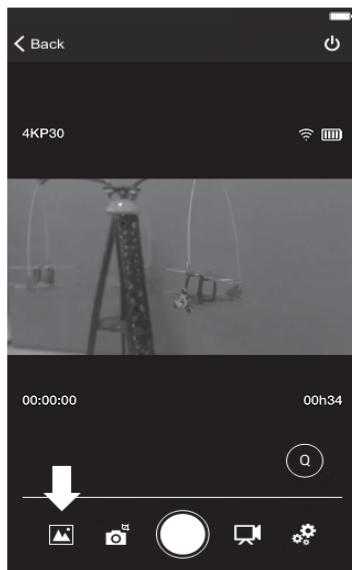

2) Tap on the Shoot icon to start shooting.
(Tap the camera icon to switch to movie mode)

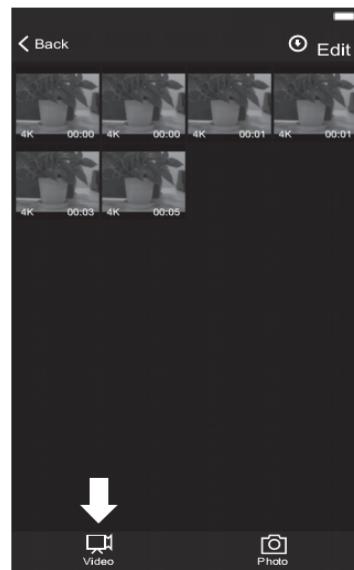

Viewing and Downloading

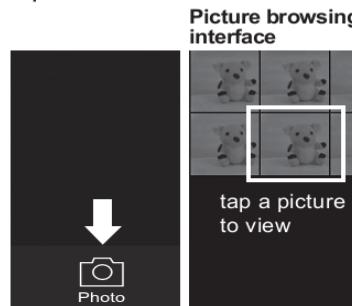

1) In the App Shoot interface, tap on the photograph icon to access the picture and video browsing interface.

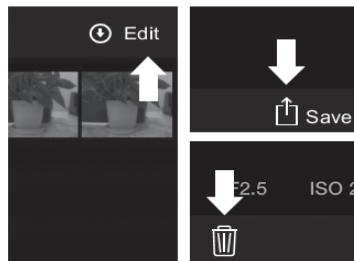

2) Tap on "Video" to access the video browsing interface and tap a video to playback. And then Tap on "Edit" to choose whether to download/delete.

3) Tap on "Photo" to access the picture browsing interface and tap a picture to view.

4) Tap on "Edit" to choose whether to download/save/delete.

Parameter Settings

In the App Shoot interface, tapping on the settings icon in the bottom right-hand corner of the screen to access the parameter settings page and make the appropriate parameter adjustments.

Settings page

Bluetooth

You can wake up the camera via Bluetooth. Moreover, you can control the camera by Bluetooth.

Firstly, make the camera is advertising state.

"Setup Menu -> Bluetooth -> Advertising -> On"

If you need to change the passcode, use the following menu:

"Setup Menu -> Bluetooth -> Passcode"

The Bluetooth's can't be changed at this stage, you can find it under:

"Setup Menu -> Bluetooth -> Name"

In the Home page of the App, there is a setting button on the upper-right corner. Click it to the setting page. There is a "Bluetooth" section in the setting menu, you can use it to connect to camera via Bluetooth. It will ask you to enter the passcode (see the info above).

You can do the following job in Bluetooth control page:

- Turn on/off camera
- Turn on/off Wi-Fi
- Take video shot or take a photo
- Mode switching

Format card

"Setup Menu -> Format card"

Clear setting

"Setup Menu -> Clear setting"

Flicker reduction

"Setup Menu -> Flicker reduction"

Fn button

You can change the Fn button function in the menu

"Setup Menu -> Fn"

Auto Power Off

To saving the power, the camera will be shut down if it in an idle state for a while.

"Setup Menu -> Auto Power off"

LCD on/off

Short press the button on the front page will turn on/off the LCD.

FCC Certification Requirements

Caution: Any changes or modifications in construction of this device which are not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.

The manufacturer is not responsible for any radio or TV interference caused by unauthorized modifications to this equipment. Such modifications could void the user's authority to operate the equipment.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
