RE: Installation requirements for Gateway Wireless Hub, FCC ID: 2AETC-1535103 IC: 12021A-1535103

The Gateway wireless hub has an open-ended user interface that allows the integrator multiple options of use for communication purposes. They are allowed to create their own software that utilized the Gateway for a variety of automated and manual communications.

For this reason, it requires professional installation. The grantee (Appareo Systems, LLC) remains responsible for compliance in the final installation of Gateway as long as professional installer agrees to the Gateway Installer Agreement. This includes installing the proper firmware to limit the operation to only compliant modes of operation and also providing the installer with the required information to ensure their software also maintains compliance where required.

As a representative for Appareo Systems, I hereby attest to this requirement.

Sincerely,

Vern Miller  
Sr. Certification Specialist, DER, DMIR
