Section 1. Report summary

1.1 Test specifications

FCC 47 CFR Part 15, Subpart C, Clause 15.247	Operation in the 902–928 MHz, 2400–2483.5 MHz, and 5725–585 MHz
FCC 47 CFR Part 15, Subpart E, Clause 15.407	Unlicensed National Information Infrastructure Devises
FCC 47 CFR Part 15, Subpart C, Clause 15.249	Operation within the bands 902–928 MHz, 2400–2483.5 MHz, 5725–5875 MHz, and 24.0–24.25 GHz.
FCC 47 CFR Part 22, Subpart C, Clause 22.359	Emission limitations.
RSS-247, Issue 2, Feb 2017, Section 5	Standard specifications for frequency hopping systems and digital transmission systems operating in the bands 902‑928 MHz, 2400-2483.5 MHz and 5725-5850 MHz
RSS-247, Issue 2, Feb 2017, Section 6	Technical requirements for licence-exempt local area network devices and digital transmission systems operating in the 5 GHz band
RSS-210 Issue 9, August 2016, Annex B.10	Devices operating in 902–928, 2400–2483.5 and 5725–5875 MHz
RSS-139 Issue 3, July 2015, Section 6	Advanced Wireless Services (AWS) Equipment Operating in the Bands 1710-1780 MHz and 2110-2180 MHz

1.2 Test methods

789033 D02 General UNII Test Procedures New Rules v02r01 (December 14, 2017)	Guidelines for Compliance Testing of Unlicensed National Information Infrastructure (U-NII) Devices Part 15, Subpart E
662911 D01 Multiple Transmitter Output v02r01 (October 31, 2013)	Emissions Testing of Transmitters with Multiple Outputs in the Same Band
558074 D01 DTS Meas Guidance v05r01 (February 11, 2019)	Guidance for Performing Compliance Measurements on Digital Transmission Systems (DTS) Operating Under §15.247
ANSI C63.10 v2013	American National Standard of Procedures for Compliance Testing of Unlicensed Wireless Devices

1.3 Exclusions

The EUT was assessed for radiated emissions as a verification with multiple transmitters enabled at the same time to ensure compliance was maintained. LTE Band 4 (1710 – 1755 MHZ) fundamental could not be filtered during radiated emission measurements. LTE Band 4 (1710 – 1755 MHz) was omitted for Configuration 1 radiated measurements.

1.4 Statement of compliance

In the configuration tested, the EUT was found compliant.

Testing was completed against all relevant requirements of the test standard or as per detailed in the section 1.3 Exclusions above. Results obtained indicate that the product under test complies in full with the requirements tested. The test results relate only to the items tested.

See “Summary of test results” for full details.

1.5 Test report revision history

Table 1.5-1: *Test report revision history*

Revision #	Date of issue	Details of changes made to test report
TRF	March 26, 2019	Original report issued
R1	April 2, 2019	Removed model variant

Section 2. Summary of test results

2.1 Testing period

Test start date	February 13, 2019
Test end date	March 11, 2019

2.2 FCC test results

Table 2.2-1: *Result summary*

Part	Section	Test description	Verdict
§15.247	d	Unwanted emissions (Radiated)	Pass
§15.249	d	Spurious emissions (except harmonics)	Pass
§15.407	(b)(1)	Undesirable emission limits (Operating in the band 5.15-5.25 GHz)	Pass
§22.359	(a)	Out of band emissions	Pass

Notes:
- The EUT was only assessed for the radiated emissions. No conducted measurements were performed.
- Only emissions that were a product of multiple transmitters enabled were verified for continued compliance.

2.3 RSS test results

Table 2.3-1: *Result summary RSS*

Part	Section	Test description	Verdict
RSS-247	5.5	Unwanted emissions[1]	Pass
RSS-210	B.10 (b)	Spurious emissions (except for harmonics)	Pass
RSS-247	6.2.1.2	Unwanted emission limits (Operating in the band 5.15-5.25 GHz)	Pass
RSS-139	6.6	Transmitter Unwanted Emissions	Pass

Notes:
- The EUT was only assessed for the radiated emissions. No conducted measurements were performed.
- Only emissions that were a product of multiple transmitters enabled were verified for continued compliance.

Section 3. Equipment under test (EUT) details

3.1 Applicant and manufacturer

Company name	Ring LLC
Address	1523 26th Street, Santa Monica, CA, United States, 90404

3.2 Sample information

Receipt date	February 1, 2019
Nemko sample ID number	Item # 3

3.3 EUT information

Product name	Ring
Model	Base Station NA
Serial number	BHBN21851PG000052

3.4 Technical information

Applicant IC company number	20271
IC UPN number	20271-BHABN002
All used IC test site(s) Reg. number	332406

Table 3.4-1: *Antenna information*

LTE Antenna	**Antenna type**	**Band 12 Peak gain, dBi**	**Band 5 peak gain, dBi**	**Band 4 peak gain, dBi**
Main	Monopole	2.8	1.7	3.8
Diversity	Monopole	-1.9	-1.4	3.6
Tri-Band Antenna	**Antenna type**		**2.4 GHz Band peak gain, dBi**	**5 GHz Band peak gain, dBi**
Wi-Fi	Inverted F		5.8	5.6
Bluetooth	Inverted F		5.8	N/A
Dual band antenna	**Antenna type**		**900 MHz Band peak gain, dBi**	**2.4 GHz Band peak gain, dBi**
Z-Wave	Inverted F		0.8	NA
Zigbee	Inverted F		NA	4.8

Notes: None

3.5 Co-location test plan

Table 3.5-1: *Co-Location configurations*

Radio module device	Radio parameters
Configuration 1: LTE + ZigBee + Z-Wave + SimpleLink (TI1310)	
LTE	1728 MHz
Zigbee	Low Channel 11: 2405 MHz
Z-Wave	High Channel 916 MHz
SimpleLink (TI1310)	High Channel 927.8 MHz
Configuration 2: BT + ZigBee + Z-Wave + SimpleLink (TI1310)	
BT	Low Channel 00: 2402 MHz
Zigbee	Low Channel 11: 2405 MHz
Z-Wave	High Channel 916 MHz
SimpleLink (TI1310)	High Channel 927.8 MHz
Configuration 3: WiFi 2.4 GHz + ZigBee + Z-Wave + SimpleLink (TI1310)	
WIFI	Low Channel 01: 2412 MHz
Zigbee	Low Channel 11: 2405 MHz
Z-Wave	High Channel 916 MHz
SimpleLink (TI1310)	High Channel 927.8 MHz
Configuration 4: WiFi 5 GHz + ZigBee + Z-Wave + SimpleLink (TI1310)	
WIFI (UNI band)	Low Channel 36: 5180 MHz
Zigbee	Low Channel 11: 2405 MHz
Z-Wave	High Channel 916 MHz
SimpleLink (TI1310)	High Channel 927.8 MHz

Notes: None

3.6 Product description and theory of operation

Communications Hub for Home Security Products

3.7 EUT exercise details

The EUT was setup in continuous transmit state.

3.8 EUT setup diagram

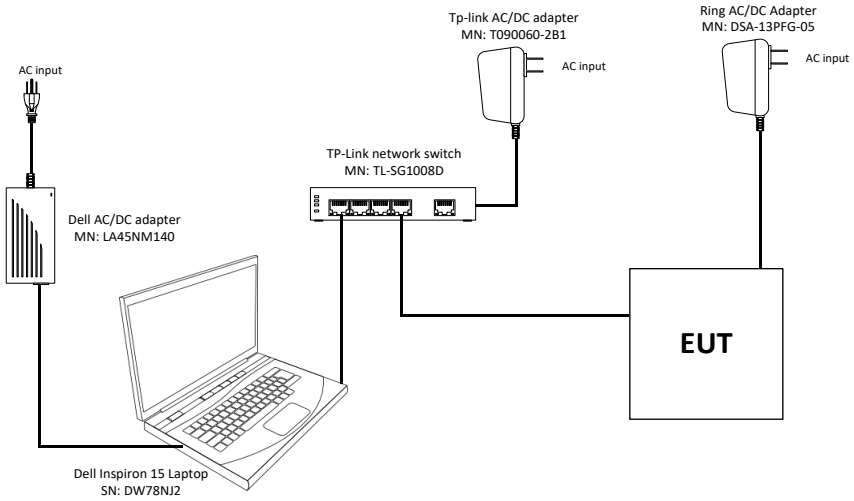

Figure 3.8-1: *Setup diagram*

3.9 EUT sub assemblies

Table 3.9-1: *EUT sub assemblies*

Description	Brand name	Model/Part number	Serial number
AC/DC Adapter	Ring	DSA-13PFG-05	BHAB11851DV000116
Laptop	Dell	Inspiron 15	DW78NJ2
Network switch	TP-Link	TL-SG1008D	2171682000263

Section 4. Engineering considerations

4.1 Modifications incorporated in the EUT for compliance

There were no modifications performed to the EUT during this assessment.

4.2 Technical judgment

None

4.3 Deviations from laboratory tests procedures

No deviations were made from laboratory procedures.

Section 5. Test conditions

5.1 Atmospheric conditions

Temperature	15–30 °C
Relative humidity	20–75 %
Air pressure	86–106 kPa

When it is impracticable to carry out tests under these conditions, a note to this effect stating the ambient temperature and relative humidity during the tests shall be recorded and stated.

5.2 Power supply range

The normal test voltage for equipment to be connected to the mains shall be the nominal mains voltage. For the purpose of the present document, the nominal voltage shall be the declared voltage, or any of the declared voltages ±5 %, for which the equipment was designed.

Section 6. Measurement uncertainty

6.1 Uncertainty of measurement

UKAS Lab 34 and TIA-603-B have been used as guidance for measurement uncertainty reasonable estimations with regards to previous experience and validation of data. Nemko Canada, Inc. follows these test methods in order to satisfy ISO/IEC 17025 requirements for estimation of uncertainty of measurement for wireless products.

Measurement uncertainty budgets for the tests are detailed below. Measurement uncertainty calculations assume a coverage factor of K = 2 with 95% certainty.

Test name	Measurement uncertainty, dB
Radiated spurious emissions	3.78

Section 7. Test equipment

Filter 902 – 928 MHz	Microwave Circuits	N03916M1	499787	FA003032	1 year	Oct. 1/19
Filter 5.15 – 5.35 GHz	Microwave Circuits	N0452501	499784	FA003030	1 year	Oct. 1/19
Horn antenna (18-25 GHz)	ETS-Lindgren	3116B	00122305	FA002948	1 year	Apr. 18/19

Notes: NCR - no calibration required, VOU - verify on use

Section 8. Testing data

8.1 Spurious emissions caused by co-located transmitters

8.1.1 Definitions and limits

FCC §15.247 (d):

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in §15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)).

FCC §15.249 (d):

Emissions radiated outside of the specified frequency bands, except for harmonics, shall be attenuated by at least 50 dB below the level of the fundamental or to the general radiated emission limits in §15.209, whichever is the lesser attenuation.

FCC §15.407 (b):

(1) For transmitters operating in the 5.15–5.25 GHz band: all emissions outside of the 5.15–5.35 GHz band shall not exceed an EIRP of −27 dBm/MHz.
(5) The emission measurements shall be performed using a minimum resolution bandwidth of 1 MHz. A lower resolution bandwidth may be employed near the band edge, when necessary, provided the measured energy is integrated to show the total power over 1 MHz.
(6) Unwanted emissions below 1 GHz must comply with the general field strength limits set forth in § 15.209.
(7) The provisions of § 15.205 apply to intentional radiators operating under this section.
(8) When measuring the emission limits, the nominal carrier frequency shall be adjusted as close to the upper and lower frequency block edges as the design of the equipment permits.

FCC §22.359 (a)

Out of band emissions. The power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least 43 + 10 log (P) dB.

RSS-210 Section B.10 (b):

Emissions radiated outside of the specified frequency bands, except for harmonic emissions, shall be attenuated by at least 50 dB below the level of the fundamental emissions or to the general field strength limits listed in RSS-Gen, whichever is less stringent.

RSS-247 Section 5.5:

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated device is operating, the RF power that is produced shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided that the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of root-mean-square averaging over a time interval, as permitted under section 5.4(d), the attenuation required shall be 30 dB instead of 20 dB. Attenuation below the general field strength limits specified in RSS-Gen is not required.

RSS-247 Section 6.2.1.2:

For transmitters operating in the band 5150–5250 MHz, all emissions outside the band 5150–5350 MHz shall not exceed −27 dBm/MHz e.i.r.p. However, any unwanted emissions that fall into the band 5250–5350 MHz must be 26 dBc, when measured using a resolution bandwidth between 1 and 5% of the occupied bandwidth, above 5.25 GHz. Otherwise, the transmission is considered as intentional and the devices shall implement dynamic frequency selection (DFS) and transmitter power control (TPC) as per the requirements for the band 5250–5350 MHz.

RSS-139 Section 6.6:

i. In the first 1.0 MHz bands immediately outside and adjacent to the equipment's smallest operating frequency block,Footnote 2 which can contain the equipment's occupied bandwidth, the emission power per any 1% of the emission bandwidth shall be attenuated below the transmitter output power P (in dBW) by at least 43 + 10 log10 p (watts) dB.
ii. After the first 1.0 MHz outside the equipment's smallest operating frequency block, which can contain the equipment's occupied bandwidth, the emission power in any 1 MHz bandwidth shall be attenuated below the transmitter output power P (in dBW) by at least 43 + 10 log10 p (watts) dB.

IC RSS-Gen Section 8.10:

Restricted bands, identified in table 6 of RSS-Gen Section 8.10, are designated primarily for safety-of-life services (distress calling and certain aeronautical bands), certain satellite downlinks, radio astronomy and some government uses. Except where otherwise indicated, the following restrictions apply:

a. fundamental components of modulation of licence-exempt radio apparatus shall not fall within the restricted bands of below;
b. unwanted emissions falling into restricted bands of below shall comply with the limits specified in RSS-Gen;
c. unwanted emissions not falling within restricted frequency bands shall either comply with the limits specified in the applicable RSS, or with those specified in RSS-Gen.

8.1.1 Definitions and limits, continued

Table 8.1-1: *FCC §15.209 and RSS-Gen – Radiated emission limits*

Frequency, MHz	Field strength of emissions		Measurement distance, m
	µV/m	dBµV/m	
0.009–0.490	2400/F	$67.6 - 20 \times \log_{10}(F)$	300
0.490–1.705	24000/F	$87.6 - 20 \times \log_{10}(F)$	30
1.705–30.0	30	29.5	30
30–88	100	40.0	3
88–216	150	43.5	3
216–960	200	46.0	3
above 960	500	54.0	3

Notes: In the emission table above, the tighter limit applies at the band edges.
For frequencies above 1 GHz the limit on peak RF emissions is 20 dB above the maximum permitted average emission limit applicable to the equipment under test

Table 8.1-2: *ISED restricted frequency bands*

MHz	MHz	MHz	GHz
0.090–0.110	12.57675–12.57725	399.9–410	7.25–7.75

8.1.3 Test summary

Verdict	Pass		
Test date	March 8, 2019	Temperature	23 °C
Test engineer	Mark Libbrecht	Air pressure	980 mbar
Test location	Cambridge	Relative humidity	31 %

8.1.4 Observations, settings and special notes

- The spectrum was searched from 30 MHz to 25 GHz.
- The spectral plots have been corrected with the associated transducer factors (i.e. antenna factors, cable loss, amplifier gains, and attenuators).
- Radiated measurements were performed at a distance of 3 m
- Unable to filter LTE @ 1728 MHz. LTE Band 4 (1710 – 1755 MHz) omitted from 1 – 3 GHz measurement for configuration 1
- Measurements 18 – 25 GHz measured at 30 cm. Offset of 20 dB/decade applied to measurement per ANSI 63.10 v2013
- Emissions detected within restricted bands that were close to the limit were found to be digital emissions.

8.1.3 Observations, settings and special notes

Spectrum analyzer settings for radiated measurements below 1 GHz:

Detector mode	Peak
Resolution bandwidth	100 kHz
Video bandwidth	300 kHz
Trace mode	Max Hold

Spectrum analyser settings for peak radiated measurements above 1 GHz:

Resolution bandwidth:	1 MHz
Video bandwidth:	3 MHz
Detector mode:	Peak
Trace mode:	Max Hold

Spectrum analyser settings for average radiated measurements in restricted bands above 1 GHz:

Resolution bandwidth:	1 MHz
Video bandwidth:	3 MHz
Detector mode:	RMS
Trace mode:	Average (100 counts)

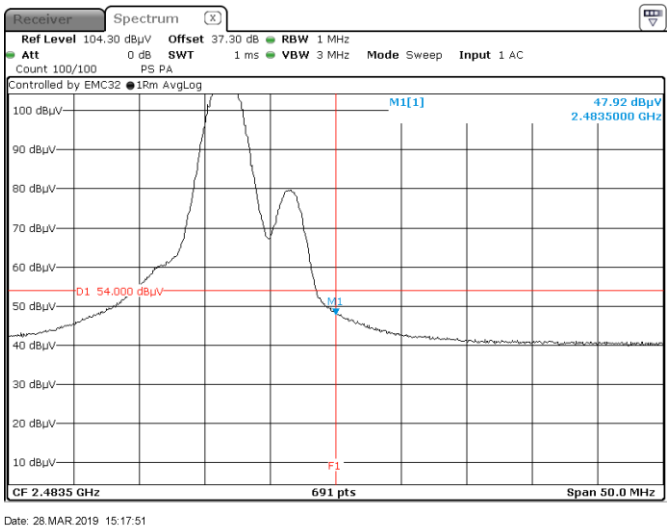

Figure 8.1-9: *Upper band edge, Configuration 2 (BLE high Channel and Zigbee high Channel) Average detector*

8.1.1 Test data, continued

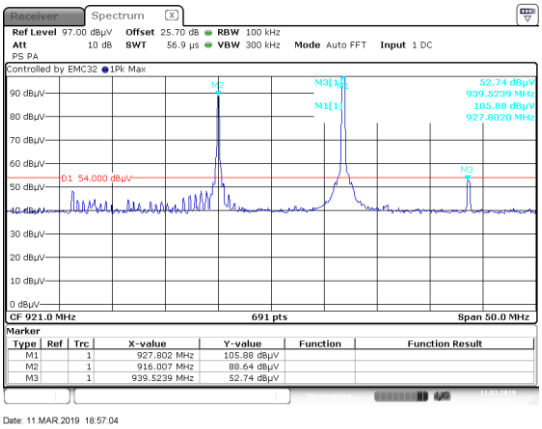

Figure 8.1-10: *Configuration 2 (Z-Wave and TI Chip) Peak detector*

8.1.4 Test data, continued

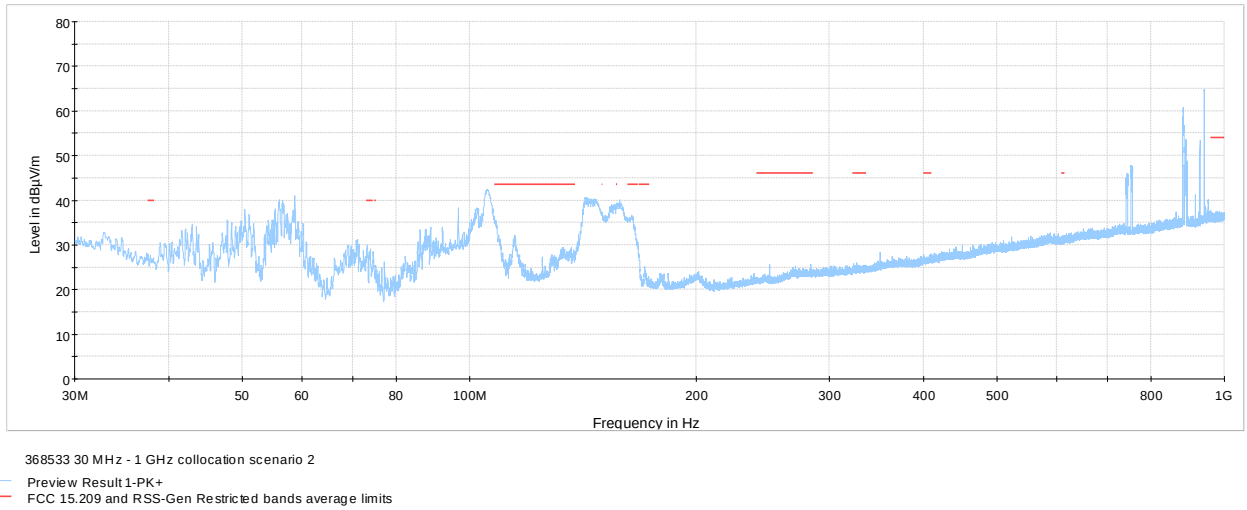

Figure 8.1-11: *Radiated spurious emissions products from co-located transmitters below 1 GHz, Configuration 2*

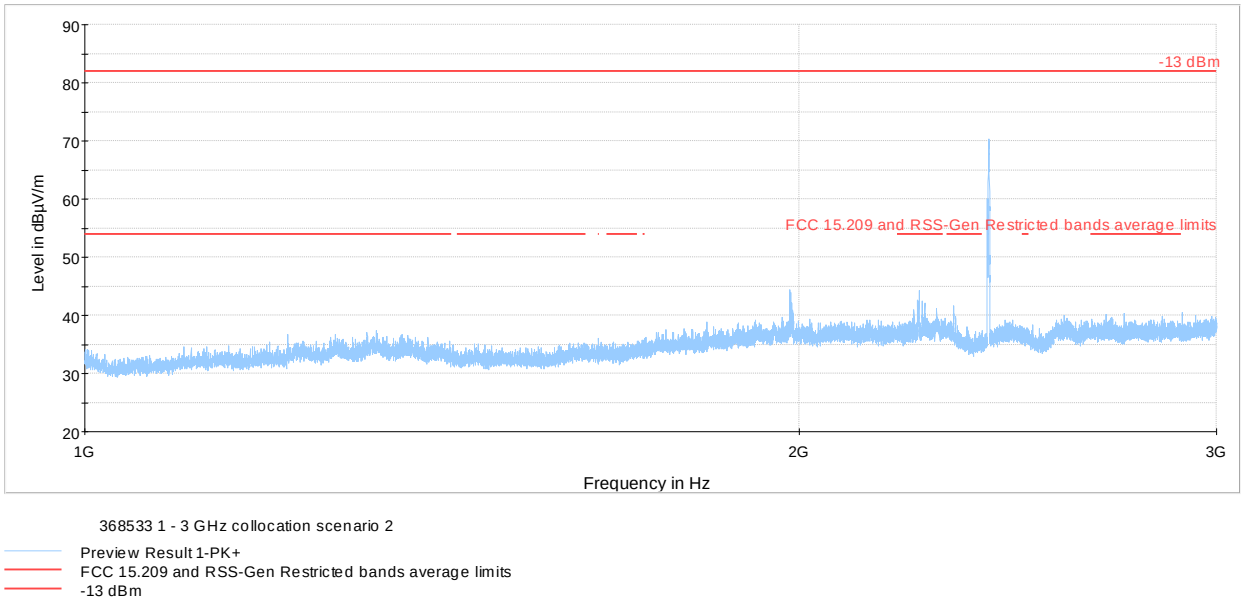

Figure 8.1-12: *Radiated spurious emissions products from co-located transmitters within 1–3 GHz, Configuration 2*

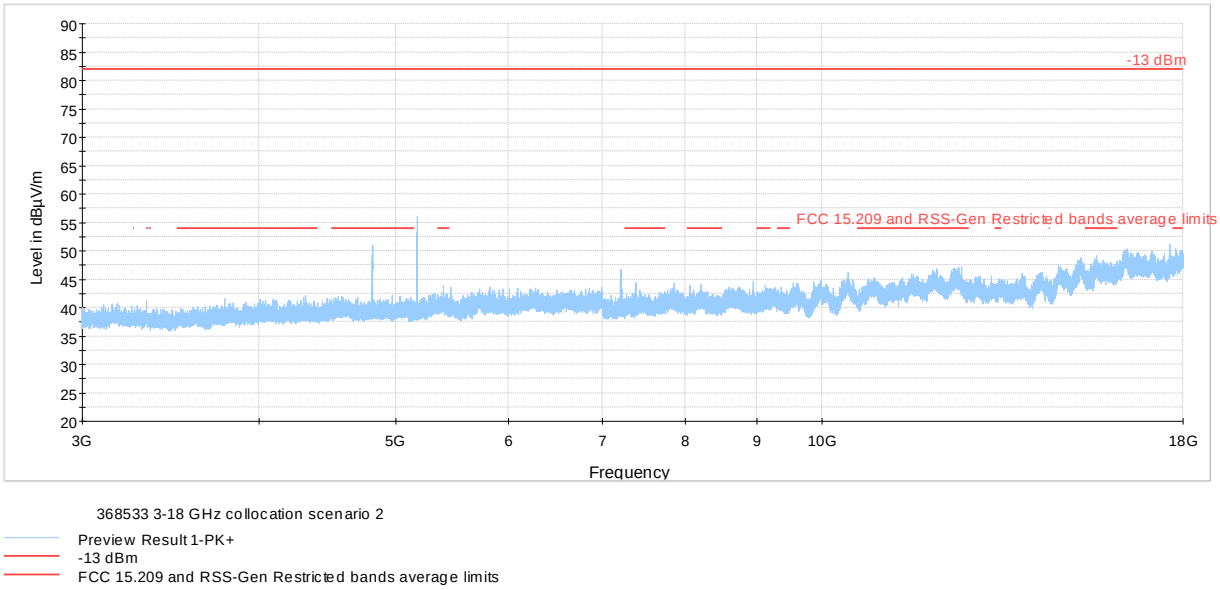

Figure 8.1-13: *Radiated spurious emissions products from co-located transmitters within 3–18 GHz, Configuration 2*

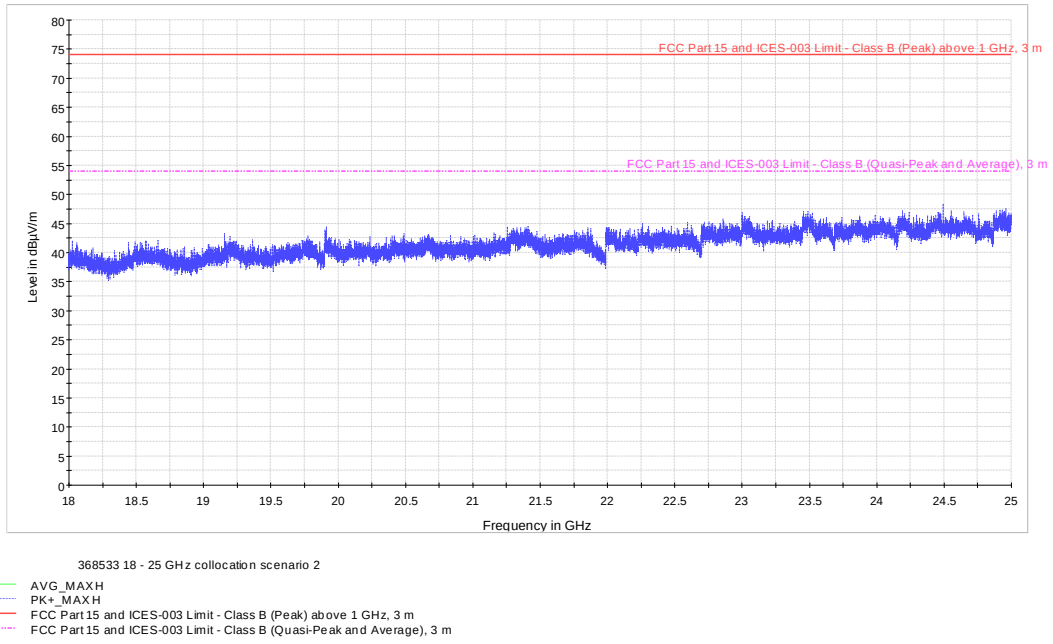

Figure 8.1-14: *Radiated spurious emissions products from co-located transmitters within 3–18 GHz, Configuration 2*

8.1.4 Test data, continued

Table 8.1-5: *Radiated field strength measurement results for 802.11b and Zigbee*

Channel	Frequency, MHz	Peak Field strength, dBµV/m		Margin, dB	Average Field strength, dBµV/m		Margin, dB
		Measured	Limit		Measured	Limit	
Low	2390	63.2	74.0	10.8	48.3	54.0	5.7
High	2483.5	63.3	74.0	10.7	47.1	54.0	6.9

Notes: Field strength includes correction factor of antenna, cable loss, amplifier, and attenuators where applicable.
