Numéro d'affaire :
Work number :

12114

Référence de la proposition :
Proposal number:

032017-22416

Date de l'essai :
Date of test:

Du 4 au 8 juin 2018
June 4th to 8th, 2018

Objectif des essais :
Test purpose:

EMC qualification accordingly to following standards:
 - CFR 47, FCC Part 15, Subpart F (15.517, Technical requirements for indoor UWB systems)
 - RSS-220, Issue 1 (5.2, UWB Indoor Communication Devices)

Lieu du test:
Test location:

SMEE, Rue de Taille
 38500 VOIRON - France

Test réalisé par :
Test realized by:

Laurent CHAPUS

Conclusion :
Conclusion:

L'équipement satisfait aux prescriptions des normes citées en référence.
The appliance complies with requirements of above mentioned standards.

- **General conclusion:**

Measures and tests performed on the sample of the product SEVENHUGS Smart Remote SR1A, in configuration and description presented in this test report, show compliance with standards FCC CFR 47, PART 15, used with channel 2 and 5.

Measures and tests performed on the sample of the product SEVENHUGS Smart Remote SR1A, in configuration and description presented in this test report, show compliance with standards RSS-220, used with channel 5.

3. Equipment Under Test (EUT)

Nom / Identification	SEVENGUGS Smart Remote SR1A								
FCC ID:	FCC ID: 2AEVC-SR1A								
IC:	IC: 20292-SR1A								
Model:	SR1A								
Alimentation / Power supply	Internal battery Lipo 3.7V								
Auxiliaires / Auxiliaries	None								
Entrées-Sorties / Input / Output	<table border="1"> <thead> <tr> <th>Câbles pour essai / Cables for test</th> <th>Blindé / Shielded</th> <th>Prévu pour >3m / Intended for >3m</th> </tr> </thead> <tbody> <tr> <td>USB C Connector (DC power from charging base)</td> <td>None</td> <td>-</td> </tr> </tbody> </table>			Câbles pour essai / Cables for test	Blindé / Shielded	Prévu pour >3m / Intended for >3m	USB C Connector (DC power from charging base)	None	-
Câbles pour essai / Cables for test	Blindé / Shielded	Prévu pour >3m / Intended for >3m							
USB C Connector (DC power from charging base)	None	-							

Version programme / Firmware version Certification_v8.6

Mode de fonctionnement / Running mode The tested sample is able to:

- Transmit a modulated carrier frequency on low, and high channels
- Be in standby mode (no transmission)

Programme de test / Test program / None

• **Equipment information:**

- Assigned Frequency band: 3743.6-4243.6MHz (Band 2) & 6239.6-6739.6MHz (Band 5)
- Operating frequencies: 3993.6MHz (Chan 2) & 6489.6MHz (Chan 5)
- Power Setting: Nominal power without variable setting
- Others UWB settings PRF: 16
Preamble length: 128
Bitrate: 6.8 Mbits
- Antenna type: PCB antenna (3.6dBi peak gain at 3993.6MHz and -0.5dBi at 6489.6MHz)
- Equipment intended for use as a fixed station (Indoor)
- The UWB function of the remote can operate only in standalone mode (Not placed on its charging base)

4. Test conditions

Power supply voltage:
Equipment under test: Internal battery Lipo 3.7V

5. Modifications of the EUT

None

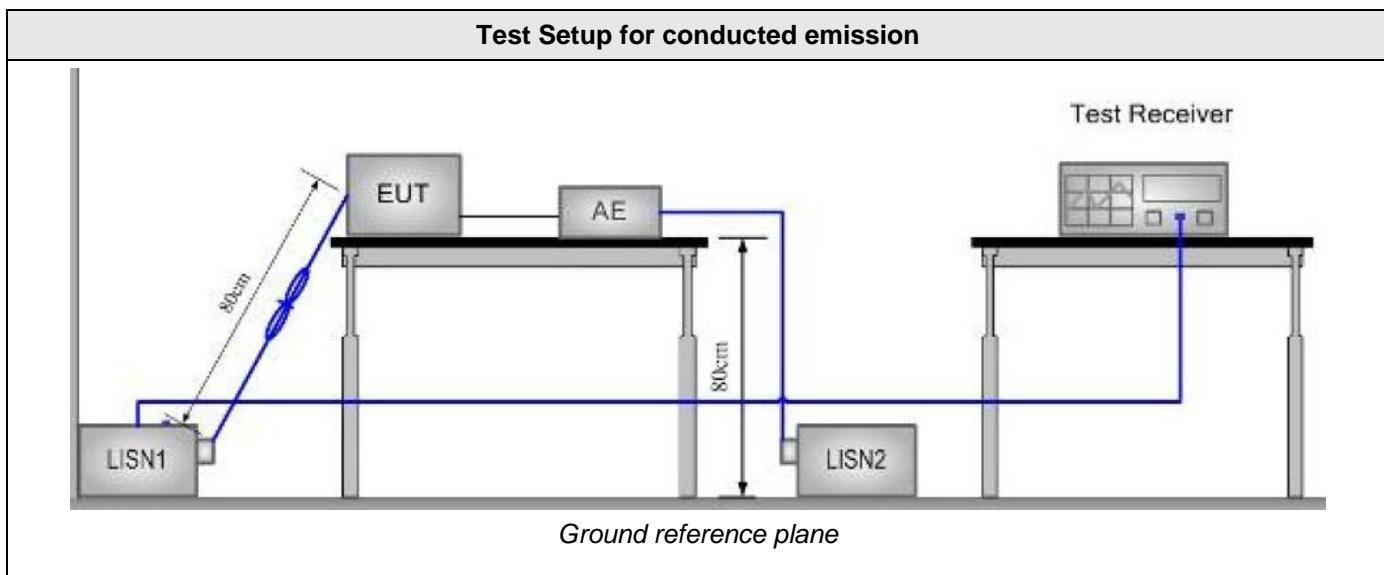

6. Special accessory

None

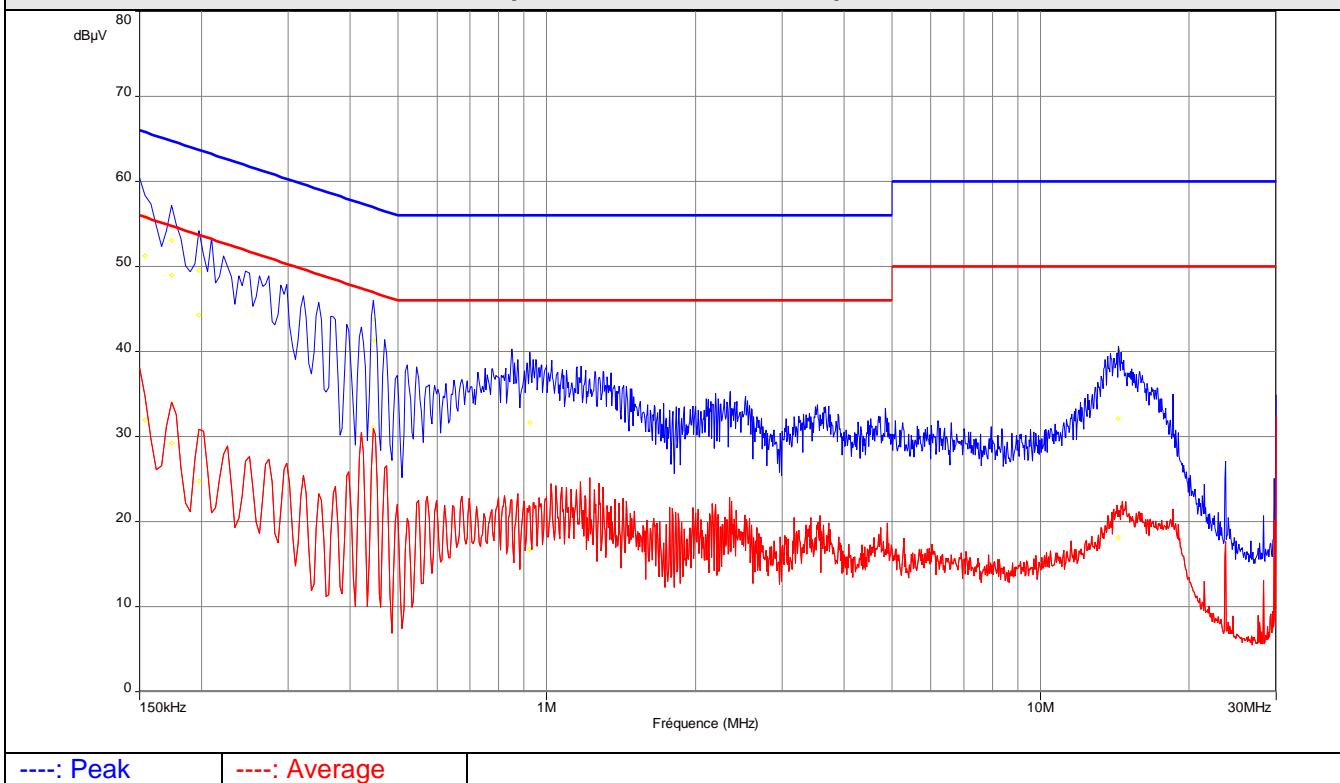

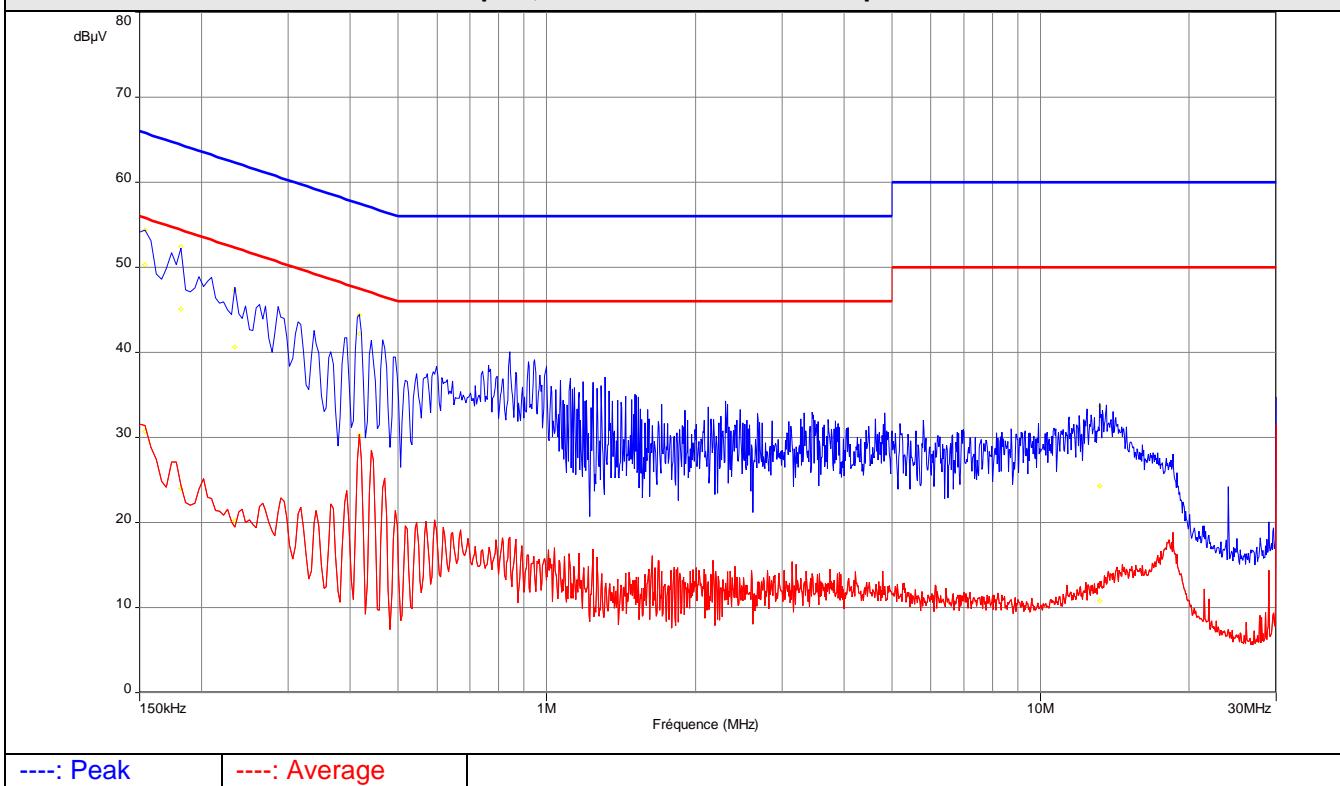

7. Conducted Emission Measurement (150kHz-30MHz)

TEST: Limits for conducted disturbance 150kHz – 30MHz			Verdict		
Method: The LISN is placed 0,8 m from the boundary of the unit under test and bonded to a ground reference plane. This distance was between the closest points of the AMN and the EUT. All other units of the EUT and associated equipment were at least 0,8 m from the AMN. All power was connected to the system through Artificial Mains Network (AMN). Conducted voltage measurements on lines were made at the output of the LISN. The EUT is 80cm above the ground reference plane and 40cm from the vertical ground plane. The AC power cable is 1m length.			Pass		
Laboratory Parameters:		Required prior to the test	During the test		
Ambient Temperature		20 to 30 °C	23°C ± 2		
Relative Humidity		25 to 70 %	63% ± 5		
Fully configured sample scanned over the following frequency range		Frequency range on each side of line	Measurement Point		
		150kHz to 30MHz	AC input port (110V) Power adapter		
Limits					
Frequency (MHz)	Limit dB (μ V)				
	Quasi-Peak	Result	Average	Result	
0.15 – 0.50	66 \ 56	PASS	56 \ 46	PASS	
0.50 - 5	56	PASS	46	PASS	
5 – 30	60	PASS	50	PASS	
Supplementary information: Test location: SMEE Test date: June 4 th , 2018. Tested by L. CHAPUS Power supply voltage: 5V from power adapter

8. Radiated Power density

TEST: Limits for radiated Radiated Power density			Verdict		
<u>Method:</u> Measurements were made in a 3-meter Full Anechoic Chamber that complies to ANSI C63.10. Final measurements were performed by rotating the EUT 360° and adjusting the receive antenna height. The tested equipment is set to transmit operation with modulations on lowest and highest channel. Three orthogonal axis measurements on EUT are performed to obtain the maximum peak field strength, with 60° rotation on each axis.(Clause 6.6.5 of ANSI C63.10).			Pass

9. Occupied Bandwidth test

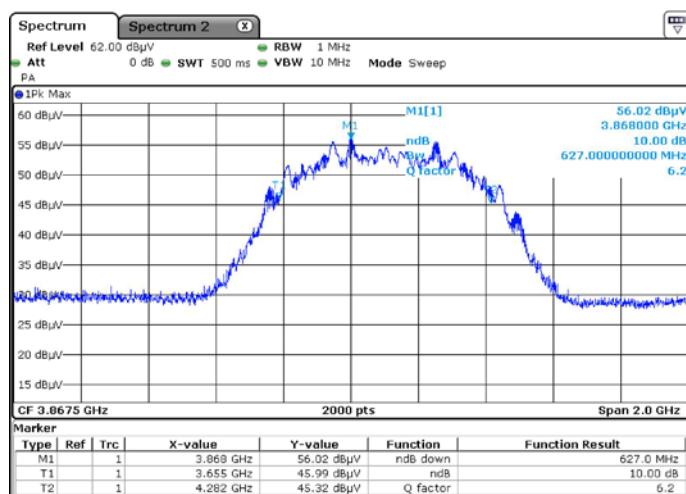

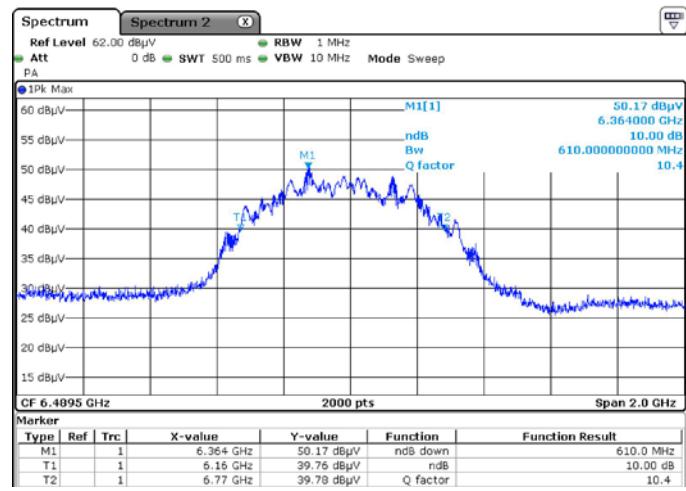

TEST: 10dB Bandwidth		Verdict
Method: The setup is in an anechoic chamber. The spectrum analyzer is connected to the measuring antenna. A radiated measurement is performed. The RBW is 1MHz, with VBW $\geq 3 \times$ RBW. The SPAN is wide enough to capture all products of the modulation process. A MaxHold Peak detector is used. The tested equipment is set to transmit operation with modulation on low and high channels.		Pass

10. Radiated emissions measurements below 960MHz

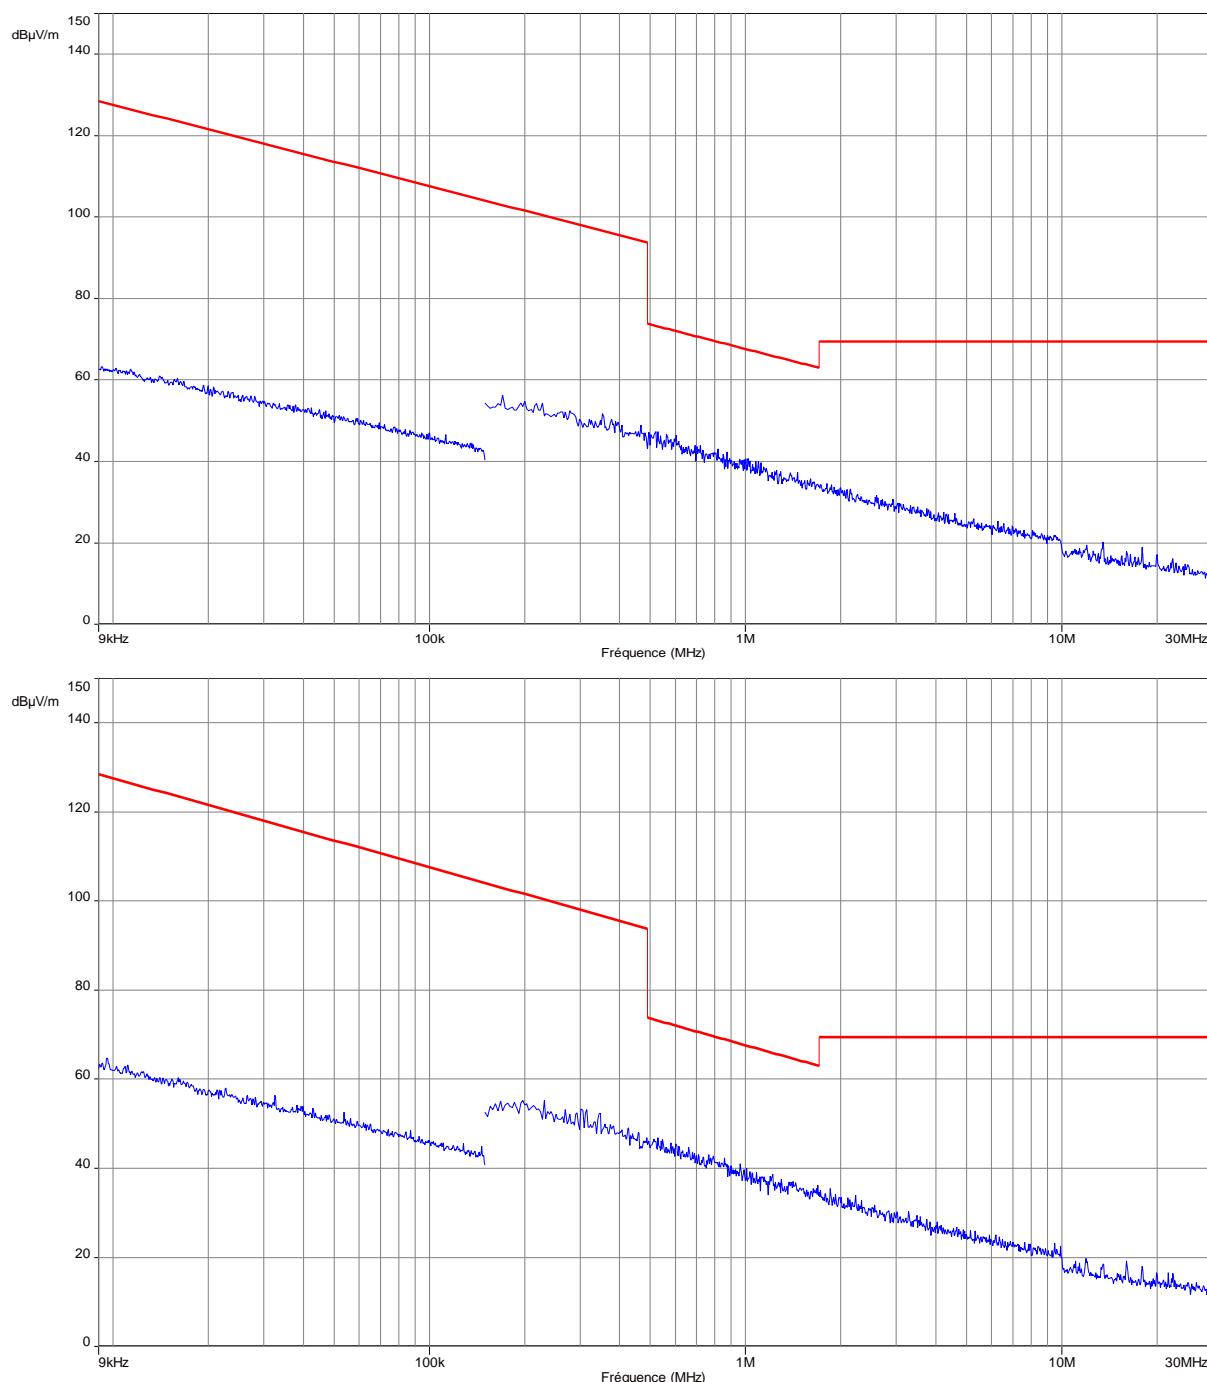

TEST: Radiated emissions measurements below 960MHz		Verdict
<u>Method:</u> Measurements were made on a 10 or 3-meter Open Area Test Site. The EUT was rotated 360° about its azimuth with the receive antenna located at various heights in horizontal and vertical polarities. Final measurements (Peak/Quasi-Peak/Average) were then performed by rotating the EUT 360° and adjusting the receive antenna height. The tested equipment is set to transmit operation with modulations on lowest and highest channel. Three orthogonal axis measurements on EUT are performed to obtain the maximum peak field strength. A pre-scan frequency identification of the EUT has been performed in full anechoic chamber. The measured pre-scan radiated field of the EUT is performed at 3-meters of distance for frequency 9k-960MHz.		Pass

Test Setup for radiated emission

Test setup for 9k-30MHz

Test setup for 30-1000MHz

Tabulated Results for Unwanted emissions (9kHz-30MHz)							
FREQ	RF field @ 30m	Limit @ 30m	Margin	Antenna		Table angle	Correc. Fact. (CF)
MHz	(QP) dB μ V/m	(QP) dB μ V/m	dB	Angle (Degree)	Position	Degree	dB
No frequency observed (Level at least 10dB below limits)							
Supplementary information: Frequency list measured on the Open Area Test Site has been created with pre-scan results.							
Frequency band investigated:	9kHz-30MHz						
RBW:	200Hz (9kHz-150kHz) 9kHz (150kHz-30MHz)						
Measurement distance:	10m						
Limit:	FCC Part 15.209 – RSS 220 5.2.1 (c)						
Final measurement detector:	Quasi-Peak / Average						
Wide Measurement Uncertainty:	$\pm 3.5\text{dB}$ ($k=2$)						
Note:	CF: Correction factor = Antenna factor + Cable loss *1: Measure have been done at 10m distance and corrected according to requirements of 15.209.e) (M@30m = M@10m-19.1dB)						

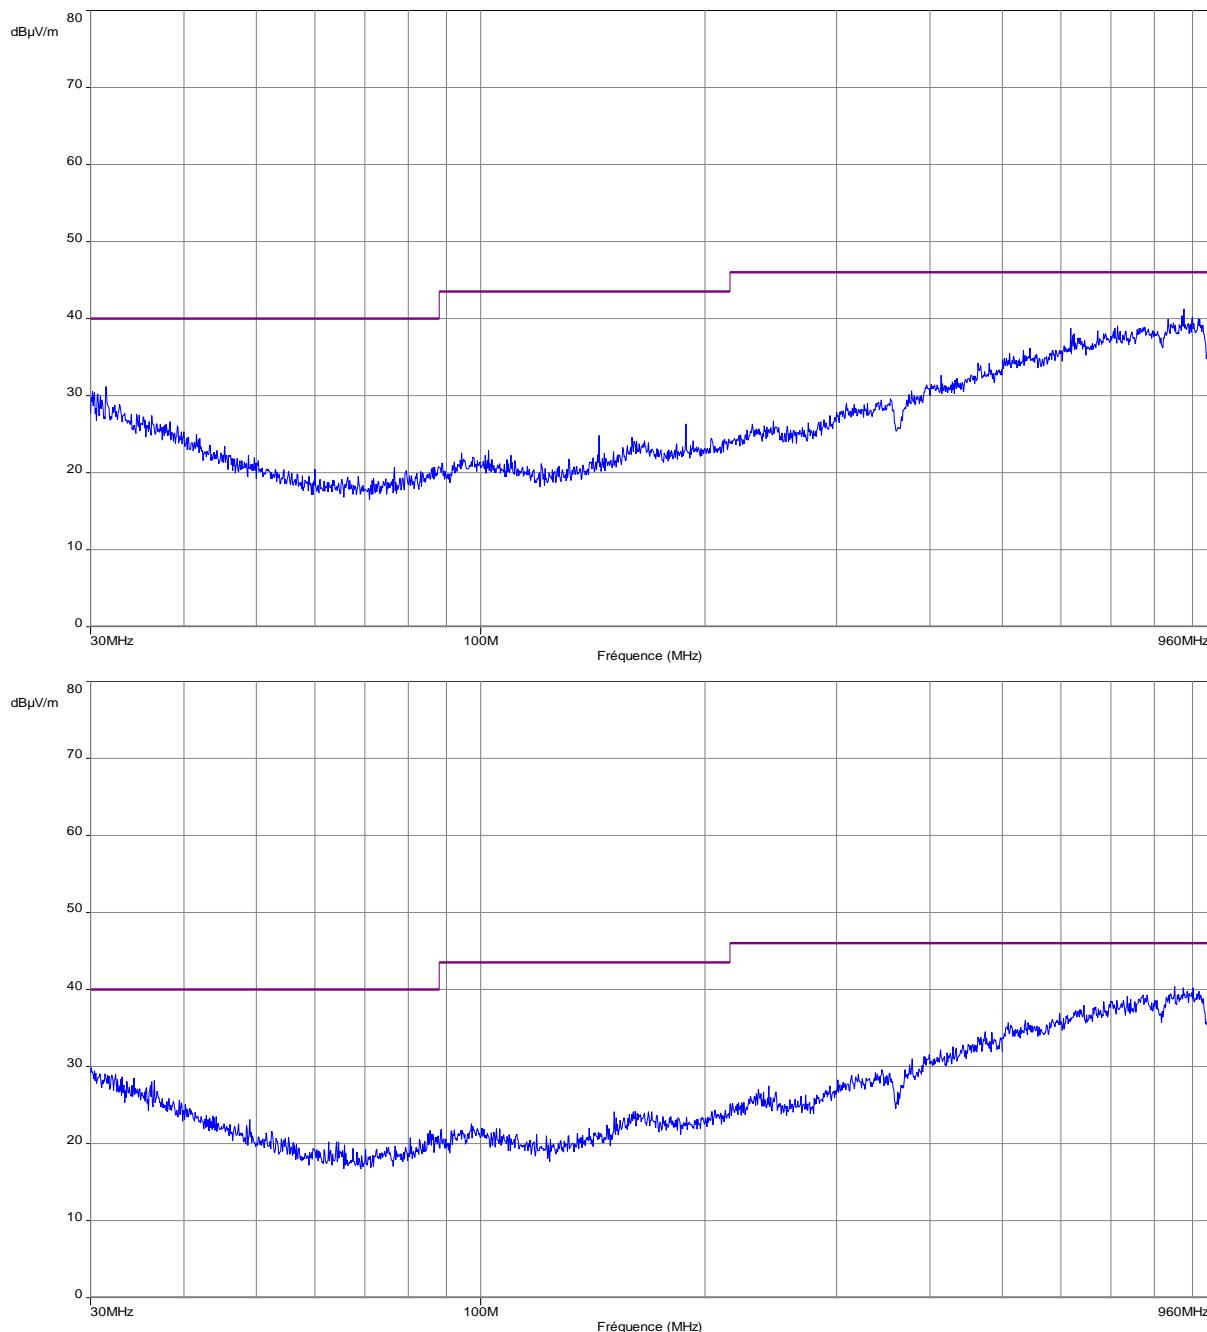

Tabulated Results for Unwanted emissions (30MHz-960MHz)					
FREQ	Meter reading	Total factor	Field level	Limit	Margin
MHz	(QP) dB μ V	dB	(QP) dB μ V/m	(QP) dB μ V/m	dB
No frequency observed (Level at least 10dB below limits)					
Supplementary information: Frequency list measured on the Open Area Test Site has been created with pre-scan results.					
Frequency band investigated:	30MHz-960MHz				
RBW:	120kHz				
Measurement distance:	3m				
Limit:	FCC Part 15.209 – RSS 220 5.2.1 (c)				
Final measurement detector:	Quasi-Peak				
Wide Measurement Uncertainty:	$\pm 5.6\text{dB}$ ($k=2$)				
RESULT:	PASS				
Notes:	(1): The field strength (level) is calculated by adding the Antenna Factor and Cable Factor, and subtracting the Amplifier Gain (if any) from the measured reading. The basic equation is as follow: FS = RA + AF + CF – AG Where FS = Field Strength RA = Receiver Amplitude AF = Antenna Factor CF = Cable Factor AG = Amplifier Gain Total factor (dB) is AF + CF – AG Margin value = Emission level – Limit value				

Graphical representation of Radiated Disturbance Measurement (Peak detection, Anechoic chamber pre-scan, 9kHz-30MHz / 3m / Parallel & Perpendicular antenna position / Transmit mode)

Notes: Pre-scan graph only for identification purpose.

Same result for transmit mode on channel 2 or channel 5

Frequency band investigated:	9kHz-30MHz
Unit :	dB μ V/m
RBW :	200Hz (9kHz-150kHz) 9kHz (150kHz-30MHz)
Antenna polarization :	Parallel / Perpendicular to measurement axis
Measurement detector:	Peak

Graphical representation of Radiated Disturbance Measurement (Peak detection, Anechoic chamber pre-scan, 30MHz-960MHz / 3m / Horizontal & Vertical / Transmit mode)

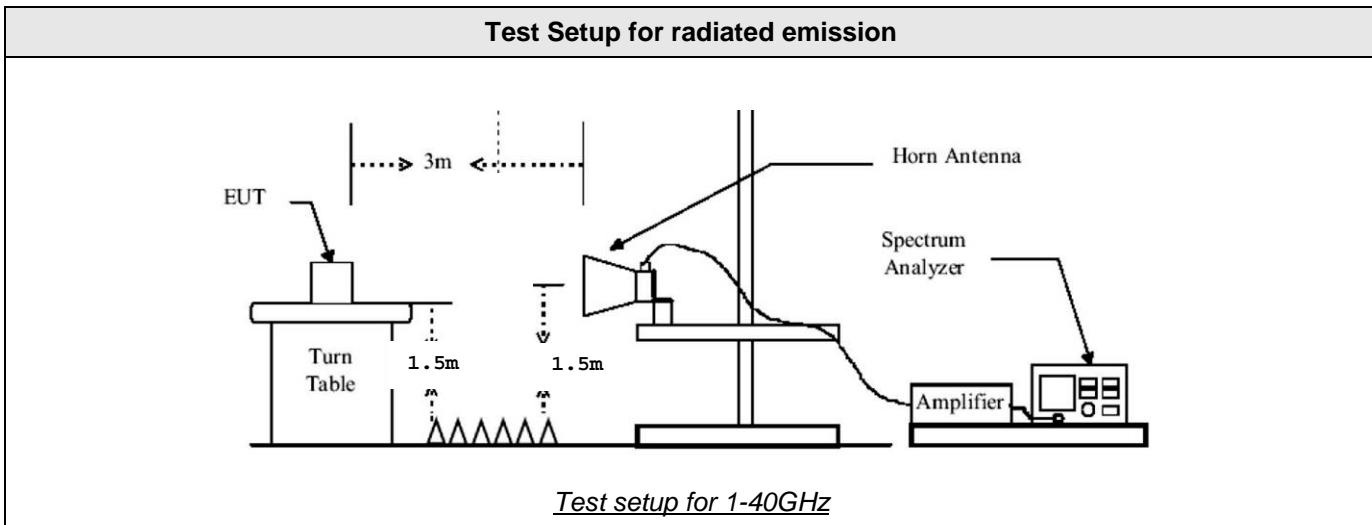

Notes: Pre-scan graph only for identification purpose.
Same result for transmit mode on channel 2 or channel 5

Frequency band investigated:	30MHz-960MHz
Unit :	dBμV/m
RBW :	100kHz
Antenna polarization :	Horizontal & Vertical
Measurement detector:	Peak

11. Radiated emissions measurements above 960MHz

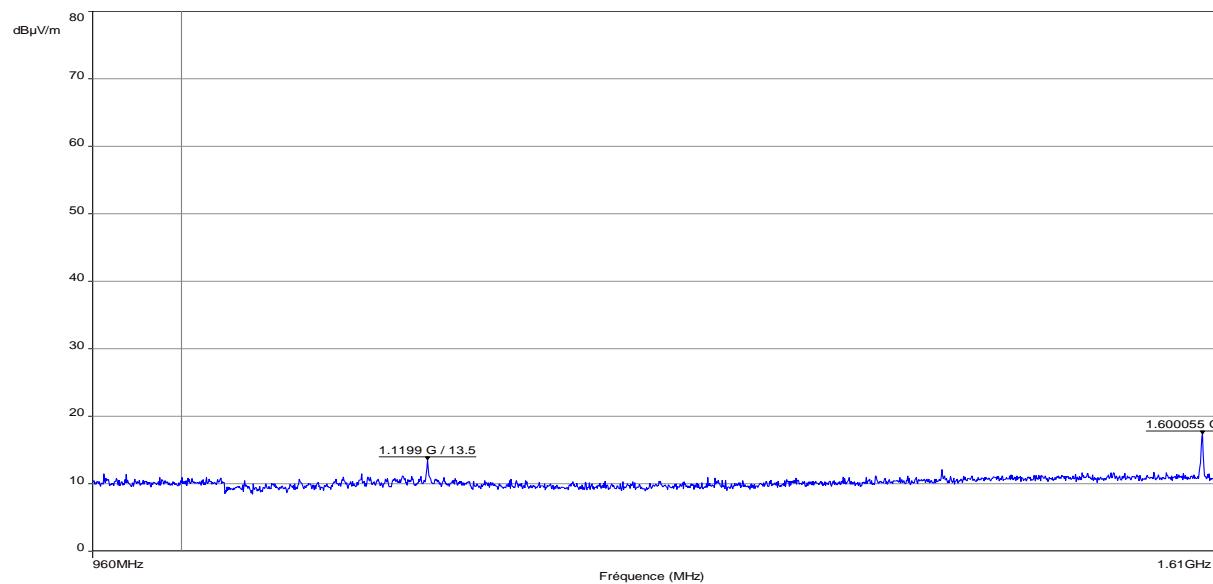

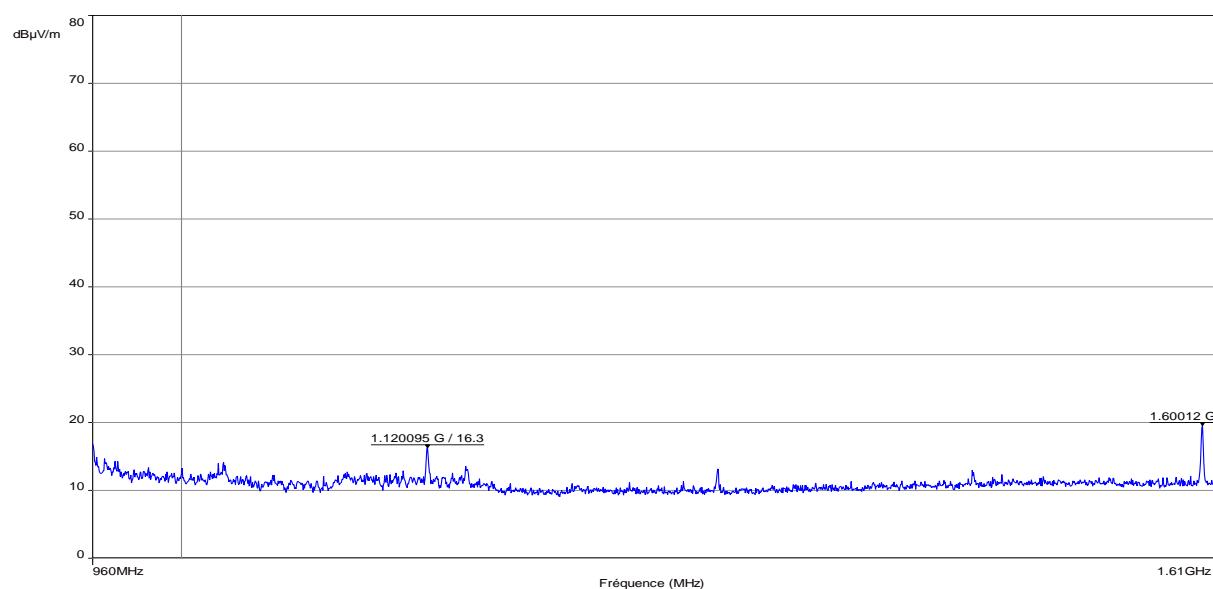

TEST: Unwanted emissions into Restricted Frequency Bands			Verdict
<p>Method: Measurements were made in a 3-meter Full Anechoic Chamber that complies to ANSI C63.10. The EUT was rotated 360° about its azimuth with the receive antenna located at various heights in horizontal and vertical polarities. Final measurements were then performed by rotating the EUT 360° and adjusting the receive antenna height.</p> <p>The tested equipment is set to transmit operation with modulations on lowest and highest channel. Three orthogonal axis measurements on EUT are performed to obtain the maximum peak field strength, with 60° rotation on each axis. (Clause 6.6.5 of ANSI C63.10).</p> <p>A pre-scan frequency identification of the EUT has been performed in full anechoic chamber.</p> <p>The measured pre-scan radiated field of the EUT is performed at 3 or 1-meters of distance for frequency 960MHz-40GHz.</p>			
			Pass

Spectrum analyzer	Rohde&Schwarz	FSV40	ASP-171-004	2017/5	2019/5

Tabulated Results for Occupied Bandwidth	
Frequency (MHz) / Channel	99% Occupied Bandwidth (MHz)
3993.6 / Chan 2	804.0
6489.6 / Chan 5	842.0

Graphical representation of Occupied Bandwidth (99%)

Chan 2

Chan 5

Frequency band investigated:	3993.6MHz and 6489.6MHz
RBW :	100kHz
Measurement detector:	Peak
