Report No.: GZEM150500232201 Page: 1 of 64 FCC ID: 2AEVZ-BTN1

TEST REPORT

The following sample(s) was/were submitted and identified on behalf of the client as:

Application No.:	GZEM1505002322CR
Applicant:	Guangzhou Rayer Acoustic Technology Co.,Ltd
Manufacturer:	The same as applicant
FCC ID:	2AEVZ-BTN1
Product Description:	Bluetooth Speaker
Model No.:	BTN1, N1, FD2120, SoundKnot 015 A
*	Please refer to section 3 of this report for further details.
Standards:	CFR 47 FCC PART 15 Subpart C: 2014 section 15.247
Date of Receipt:	2015-05-20
Date of Test:	2015-05-28 to 2015-06-10
Date of Issue:	2015-06-17
Test Result :	Pass*

In the configuration tested, the EUT detailed in this report complied with the standards specified above.
 Please refer to section 3 of this report for further detail.

The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in this report. If the product in this report is used in any configuration other than that detailed in the report, the manufacturer must ensure the new system complies with all relevant standards.

The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the federal government. All test results in this report can be traceable to National or International Standards.

This document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at http://www.sgs.com/en/Terms-and-Conditions.aspx and, for electronic format documents, subject to Terms and Conditions for Electronic Documents at http://www.sgs.com/en/Terms-and-Conditions/Terms-eDocument.aspx. Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein. Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. This document cannot be reproduced except in full, without prior written approval of the Company. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law. Unless otherwise stated the results shown in this test report refer only to the sample(s) tested and such sample(s) are retained for 30 days only.

Conducted Emissions at Mains	FCC PART 15 C	ANSI C63.10: Clause 6.2	PASS	
Terminals	section 15.207	ANOI 000.10. 014036 0.2	radd	

Remark:

EUT: In this whole report EUT means Equipment Under Test.

N/A: not applicable. Refer to the relative section for the details.

EUT: In this whole report EUT means Equipment Under Test.

Tx: In this whole report Tx (or tx) means Transmitter.

Rx: In this whole report Rx (or rx) means Receiver.

RF: In this whole report RF means Radio Frequency.

ANSI C63.10: the detail version is ANSI C63.10:2009 in the whole report.

DA 00-705 was used as a guideline in preparing this Test Report.

* Model No.: BTN1,N1, FD2120, SoundKnot 015

According to the declaration from the applicant, the electrical circuit design, layout, components used and internal wiring were identical for all models, with only difference being the model name.

Therefore only one model BTN1 was tested in this report.

This document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at <a href="http://www.sgs.com/en/Terms-and-Conditions/Terms-

5 General Information

5.1 Client Information

Applicant:	Guangzhou Rayer Acoustic Technology Co.,Ltd
Address of Applicant:	520, 192 Kezhu Road, Guangzhou Science Park, Guangdong
Manufacturer:	The same as applicant
Address of Manufacturer:	The same as applicant

5.2 General Description of E.U.T.

Product Description: Bluetooth Speaker Model No.: BTN1

5.3 Details of E.U.T.

Operating Frequency	2402 MHz to 2480 MHz
Type of Modulation:	GFSK, (π/4)DQPSK, 8DPSK
Number of Channels	79 Channels
Channel Separation:	1 MHz
Dwell time	Per channel is less than 0.4s.
Antenna Type	Integral
Antenna gain:	0 dBi
Specialty:	Bluetooth 2.1 with EDR
Test Software:	RDA_BT_Tester
Function:	Speaker with BT function to transmit and receive audio signal.
Power Supply:	Working voltage: DC 3.7V 1300mAh rechargeable battery
	Charging voltage: DC 5V
AUX cable:	0.5m unscreened AUX cable
USB cable:	0.3m unscreened USB cable

Remark: The device meets the requirements stated within Parts 15.247(g) & (h) in that they were developed under the Bluetooth protocol and operate as a true frequency hopping system. The device does not have the ability to be coordinated with other FHSS systems in an effort to avoid the simultaneous occupancy of individual hopping frequencies by multiple transmitters.

This document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at http://www.sgs.com/en/Terms-and-Conditions.aspxand,for electronic format documents, subject to Terms and Conditions for Electronic Documents at http://www.sgs.com/en/Terms-end-Conditions/Terms-en

Report No.: GZEM150500232201 Page: 6 of 64

5.4 Modulation configure

Modulation	Packet	Packet Type	Packet Size
	DH1	4	24
GFSK	DH3	11	183
	DH5	15	339
	2DH1	20	54
(π/4)DQPSK	2DH3	26	367
	2DH5	30	379
	3DH1	24	83
8DPSK	3DH3	27	552
	3DH5	31	1021

Remark:

Modulation 8-DPSK

The modulation 8 PSK works with 8 phases between 0 and 2*pi (0 and 360 degrees), it can be seeing bellow in the circle.

Normal mode: the Bluetooth has been tested on the Modulation of GFSK;

EDR mode: the Bluetooth has been tested on the Modulation of $(\pi/4)$ DQPSK and 8DPSK, compliance test and record the worst case on 8DPSK.

This document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at <a href="http://www.sgs.com/en/Terms-and-Conditions/Terms-

Report No.: GZEM150500232201 Page: 7 of 64

5.5 Description of Support Units

The EUT has been tested with corresponding accessories as below:

Supplied by SGS:

1. Adapter:

Model:MJ4105 Input: AC 120V 60Hz Output:5V 1000mA

2.

Description	Manufacturer	Model No.	SN/Certificate NO
NoteBook	IBM	Т30	S/N78-3VMLX 06/01
BT Test Board	CVTE	CNMT1B	CNMT1B1

Using the special software and development board we can enter the product for engineer mode then we can control the EUT to select the wanted channel for test as bellowing. The test board and PC are only to configure the engineer mode and not used to final test.

5.6 Deviation from Standards

Biconical and log periodic antennas were used instead of dipole antennas.

5.7 Abnormalities from Standard Conditions

None.

5.8 Other Information Requested by the Customer

None.

5.9 Test Location

All tests were performed at:

SGS-CSTC Standards Technical Services Co., Ltd., Guangzhou Branch EMC Laboratory, 198 Kezhu Road, Scientech Park, Guangzhou Economic & Technology Development District, Guangzhou, China 510663 Tel: +86 20 82155555 Fax: +86 20 82075059

No tests were sub-contracted.

Report No.: GZEM150500232201 Page: 8 of 64

5.10 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

• NVLAP (Lab Code: 200611-0)

SGS-CSTC Standards Technical Services Co., Ltd., Guangzhou EMC Laboratory is accredited by the National Voluntary Laboratory Accreditation Program (NVLAP/NIST). NVLAP Code: 200611-0.

The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any ager of the Federal Government.

• ACMA

SGS-CSTC Standards Technical Services Co., Ltd., EMC Laboratory can also perform testing for the Australian C-Tick mark as a result of our NVLAP accreditation.

• SGS UK(Certificate No.: 32), SGS-TUV SAARLAND and SGS-FIMKO

Have approved SGS-CSTC Standards Technical Services Co., Ltd., EMC Laboratory as a supplier of EMC TESTING SERVICES and SAFETY TESTING SERVICES.

• CNAS (Lab Code: L0167)

SGS-CSTC Standards Technical Services Co., Ltd., EMC Laboratory has been assessed and in compliance with CNAS-CL01:2006 accreditation criteria for testing laboratories (identical to ISO/IEC 17025:2005 General Requirements) for the Competence of Testing Laboratories.

• FCC (Registration No.: 282399)

SGS-CSTC Standards Technical Services Co., Ltd., EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance lette from the FCC is maintained in our files. Registration 282399, May 31, 2002.

• Industry Canada (Registration No.: 4620B-1)

The 3m/10m Alternate Semi-anechoic chamber of SGS-CSTC Standards Technical Services Co., Ltd has been registered by Certification and Engineering of Industry Canada for radio equipment testing with Registration No. 4620B-1.

• VCCI (Registration No.: R-2460, C-2584, G-449 and T-1179)

The 10m Semi-anechoic chamber and Shielded Room of SGS-CSTC Standards Technical Services C Ltd. have been registered in accordance with the Regulations for Voluntary Control Measures with Registration No.: R-2460, C-2584, G-449 and T-1179 respectively.

• CBTL (Lab Code: TL129)

SGS-CSTC Standards Technical Services Co., Ltd., E&E Laboratory has been assessed and fully comply with the requirements of ISO/IEC 17025:2005, the Basic Rules, IECEE 01:2006-10 and Rules procedure IECEE 02:2006-10, and the relevant IECEE CB-Scheme Operational documents.

7 Test Results

7.1 E.U.T. test conditions

Test Voltage:	AC 120V, 60 Hz for charging
	DC 3.7V for host device
Temperature:	20.0 -25.0 °C
Humidity:	38-50 % RH
Atmospheric Pressure:	1000 -1010 mbar
Requirements:	 15.31(e): For intentional radiators, measurements of the variation of the input power or the radiated signal level of the fundamental frequency component of the emission, as appropriate, shall be performed with the supply voltage varied between 85% and 115% of the nominal rated supply voltage. For battery operated equipment, the equipment tests shall be performed using a new battery. 15.32: Power supplies and CPU boards used with personal computers and for which separate authorizations are required to be obtained shall be tested as follows: Testing shall be in accordance with the procedures specified in Section 15.31 of this part.
Test frequencies and frequency range:	According to the 15.31(m) Measurements on intentional radiators or receivers, other than TV broadcast receivers, shall be performed and, if required, reported for each band in which the device can be operated with the device operating at the number of frequencies in each band specified in the following table:
	According to the 15.33 (a) For an intentional radiator, the spectrum shall be investigated from the lowest radio frequency signal generated in the device, without going below 9 kHz, up to at least the frequency shown in the following table:

Number of fundamental frequencies to be tested in EUT transmit band

Frequency range in which	Number of	Location in frequency range		
device operates	frequencies	of operation		
1 MHz or less	1	Middle		
1 MHz to 10 MHz	2	1 near top and 1 near bottom		
More then 10 MHz	3	1 near top, 1 near middle and 1		
More than 10 MHz	3	near bottom		

Frequency range of radiated emission measurements

Lowest frequency generated in the device	Upper frequency range of measurement					
9 kHz to below 10 GHz	10th harmonic of highest fundamental frequency or to 40 GHz,					
	whichever is lower					
At or above 10 GHz to below	5th harmonic of highest fundamental frequency or to 100 GHz,					
30 GHz	whichever is lower					
At or above 30 GHz	5th harmonic of highest fundamental frequency or to 200 GHz,					
	whichever is lower, unless otherwise specified

Test frequencies are the lowest channel: 0 channel(2402 MHz), middle channel: 39 channel(2441 MHz) and highest channel: 78 channel(2480 MHz)

This document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at http://www.sgs.com/en/Terms-and-Conditions.aspx.and.for electronic format documents, subject to Terms and Conditions for Electronic Documents at <a href="http://www.sgs.com/en/Terms-end-Conditions/T

Report No.: GZEM150500232201 Page: 14 of 64

7.2 Antenna Requirement

Standard requirement

15.203 requirement:

For intentional device. According to 15.203. an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device.

15.247(c) (1)(i) requirement:

(i) Systems operating in the 2400-2483.5 MHz bands that are used exclusively for fixed.

Point-to-point operations may employ transmitting antennas with directional gain greater than 6 dBi provided the maximum conducted output power of the intentional radiator is reduced by 1 dB for every 3 dB that the directional gain of the antenna exceeds 6 dBi.

EUT Antenna

The antenna is integrated on the main PCB and no consideration of replacement. The maximum gain of the antenna is 3 dBi.

Test result: The unit does meet the FCC requirements.

Report No.: GZEM150500232201 Page: 15 of 64

7.3 Occupied Bandwidth

Test Requirement: FCC Part 15 C section 15.247

(a)(1) Frequency hopping systems shall have hopping channel carrier frequencies separated by a minimum of 25 kHz or the 20 dB bandwidth of the hopping channel, whichever is greater. Alternatively, frequency hopping systems operating in the 2400-2483.5 MHz band may have hopping channel carrier frequencies that are separated by 25 kHz or two-thirds of the 20 dB bandwidth of the hopping channel, whichever is greater, provided the systems operate with an output power no greater than 125 mW.

Test Method: ANSI C63.10: Clause 6.9.1

Test Status:Pre-test the EUT in continuous transmitting mode at the lowest (2402 MHz),
middle (2441 MHz) and highest (2480 MHz) channel with different data
package. Compliance test in normal mode (DH5) and EDR mode (3DH5) as
the worst case was found.

Pre-test the EUT in AC mode and B/O mode, find worse case in B/O mode.

Test Configuration:

Test Procedure:

- 1. Remove the antenna from the EUT and then connect a low RF cable from the antenna port to the spectrum;
- 2. Set the spectrum analyzer: Span = approximately 2 to 3 times the 20dB bandwidth, centring on a hopping channel;
- Set the spectrum analyzer: RBW >= 1% of the 20dB bandwidth VBW >= RBW. Sweep = auto; Detector Function = Peak. Trace = Max Hold.
- 4. Mark the peak frequency and -20 dB points bandwidth.

7.4 Carrier Frequencies Separated

Test Requirement: FCC Part 15 C section 15.247

(a),(1) Frequency hopping systems shall have hopping channel carrier frequencies separated by a minimum of 25 kHz or the 20 dB bandwidth of the hopping channel, whichever is greater. Alternatively, frequency hopping systems operating in the 2400-2483.5 MHz band may have hopping channel carrier frequencies that are separated by 25 kHz or two-thirds of the 20 dB bandwidth of the hopping channel, whichever is greater, provided the systems operate with an output power no greater than 125 mW.

Test Method: ANSI C63.10: Clause 7.7.2

 Test Status:
 Pre-test the EUT in hopping mode with different data packet. Compliance test in hopping with EDR mode (3DH5) as the worst case was found.

Pre-test the EUT in AC mode and B/O mode, find worse case in B/O mode.

Test Configuration:

Ground Reference Plane

Test Procedure:

- 1. Remove the antenna from the EUT and then connect a low attenuation RF cable from the antenna port to the spectrum.
- Set the spectrum analyzer: RBW >= 1% of the span, VBW >= RBW,. Sweep = auto; Detector Function = Peak. Trace = Max, hold.
- Allow the trace to stabilize. Use the marker-delta function to determine the separation between the peaks of the adjacent channels. The limit is specified in one of the subparagraphs of this Section. Submit this plot.

This document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at http://www.sgs.com/en/Terms-end-Conditions

Report No.: GZEM150500232201 Page: 21 of 64

Test result:

Test Channel	Carrier Frequencies Separated	Limit(1)	Pass/Fail
Lower Channels (channel 0 and channel 1)	1.002MHz	0.841	Pass
Middle Channels (channel 39 and channel 40)	1.002MHz	0.855	Pass
Upper Channels (channel 77 and channel 78)	1.002MHz	0.855	Pass

Remark:

① The limit is two-thirds of the 20dB bandwidth EDR(3DH5) mode due to the transmission power is less than 0.125 W shown on section 7.8 of this report.

Report No.: GZEM150500232201 Page: 22 of 64

Result plot as follows:

7.5 Hopping Channel Number

Test Requirement:	FCC Part15 C section 15.247
	(a)(1)(iii) Frequency hopping systems in the 2400-2483.5 MHz band shall use
	at least 15 channels.
Test Method:	ANSI C63.10: Clause 7.7.3
Test Status:	Pre-test the EUT in hopping mode with different data packet. Compliance test
	in hopping with EDR mode (3DH5) as the worst case was found.
	Pre-test the EUT in AC mode and B/O mode, find worse case in B/O mode.

Test Configuration:

Test Procedure:

- 1. Remove the antenna from the EUT and then connect a low attenuation RF cable from the antenna port to the spectrum.
- Set the spectrum analyzer: RBW = 100 kHz. VBW = 100 kHz. Sweep = auto; Detector Function = Peak. Trace = Max hold.
- 3. Allow the trace to stabilize. It may prove necessary to break the span up to sections. in order to clearly show all of the hopping frequencies. The limit is specified in one of the subparagraphs of this Section.
- 4. Set the spectrum analyzer: start frequency = 2400 MHz. stop frequency = 2483.5 MHz. Submit the test result graph.

Report No.: GZEM150500232201 Page: 25 of 64

Test result: Total channels are 79 channels.

Test result: The unit does meet the FCC requirements.

This document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at http://www.sgs.com/en/Terms-and-Conditions.aspx.and.for electronic format documents, subject to Terms and Conditions for Electronic Documents at <a href="http://www.sgs.com/en/Terms-end-Conditions/T

Report No.: GZEM150500232201 Page: 26 of 64

7.6 Dwell Time

Test Requirement: FCC Part 15 C section 15.247

(a)(1)(iii) Frequency hopping systems in the 2400-2483.5 MHz band shall use at least 15 channels. The average time of occupancy on any channel shall not be greater than 0.4 seconds within a period of 0.4 seconds multiplied by the number of hopping channels employed. Frequency hopping systems may avoid or suppress transmissions on a particular hopping frequency provided that a minimum of 15 channels are used.

- Test Method: ANSI C63.10: Clause 7.7.4
- **Test Status:** Test the EUT in hopping mode at the lowest (2402 MHz), middle (2441 MHz) and highest (2480 MHz) channel with different data packet. Compliance test in hopping mode with EDR mode (3DH1, 3DH3 and 3DH5) as the worst case was found.

Pre-test the EUT in AC mode and B/O mode, find worse case in B/O mode.

Test Configuration:

Test Procedure:

1. Remove the antenna from the EUT and then connect a low attenuation RF cable from the antenna port to the spectrum.

2.Set spectrum analyzer span = 0. centered on a hopping channel;

3.Set RBW = 1 MHz and VBW = 1 MHz. Sweep = as necessary to capture the entire dwell time per hopping channel. Detector Function = Peak. Trace = Max hold;

4. Use the marker-delta function to determine the dwell time. If this value varies with different modes of operation (e.g., data rate, modulation format, etc.). Repeat this test for each variation. The limit is specified in one of the subparagraphs of this Section. Submit this plot(s). An oscilloscope may be used instead of a spectrum analyzer.

This document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at http://www.sgs.com/en/Terms-end-Conditions

Report No.: GZEM150500232201 Page: 27 of 64

Test Result:

The test period: T= 0.4 Second/Channel x 79 Channel = 31.6 s

1. Channel 0: 2.402GHz										
3DH1 time slot	=	0.390	(ms)	*	33	*	(31.6/3.16)	=	128.700	ms
3DH3 time slot	=	1.653	(ms)	*	16	*	(31.6/3.16)	=	264.480	ms
3DH5 time slot	=	2.895	(ms)	*	11	*	(31.6/3.16)	=	318.450	ms
2. Channel 39: 2.4	2. Channel 39: 2.441GHz									
3DH1 time slot	=	0.390	(ms)	*	33	*	(31.6/3.16)	=	128.700	ms
3DH3 time slot	=	1.653	(ms)	*	16	*	(31.6/3.16)	=	264.480	ms
3DH5 time slot	=	2.885	(ms)	*	11	*	(31.6/3.16)	=	317.350	ms
3. Channel 78: 2.480GHz										
3DH1 time slot	=	0.410	(ms)	*	33	*	(31.6/3.16)	=	135.300	ms
3DH3 time slot	=	1.653	(ms)	*	16	*	(31.6/3.16)	=	264.480	ms
3DH5 time slot	=	2.895	(ms)	*	11	*	(31.6/3.16)	=	318.450	ms

The average time of occupancy in the specified 31.6 second period is equal to pulse width*(# of pulse in

observation period)*(test period / observation period)

The results are not greater than 0.4 seconds.

The unit does meet the FCC requirements.

7.7 Pseudorandom Frequency Hopping Sequence

7.7.1 Standard requirement

15.247(a)(1) requirement:

Frequency hopping systems shall have hopping channel carrier frequencies separated by a minimum of 25 kHz or the 20 dB bandwidth of the hopping channel, whichever is greater.

Alternatively. Frequency hopping systems operating in the 2400-2483.5 MHz band may have hopping channel carrier frequencies that are separated by 25 kHz or two-thirds of the 20 dB bandwidth of the hopping channel, whichever is greater, provided the systems operate with an output power no greater than 125 mW. The system shall hop to channel frequencies that are selected at the system hopping rate from a Pseudorandom ordered list of hopping frequencies. Each frequency must be used equally on the average by each transmitter. The system receivers shall have input bandwidths that match the hopping channel bandwidths of their corresponding transmitters and shall shift frequencies in synchronization with the transmitted signals.

This document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at <a href="http://www.sgs.com/en/Terms-and-Conditions/Terms-

Report No.: GZEM150500232201 Page: 38 of 64

7.7.2 Other requirements Frequency Hopping Spread Spectrum System

	47 CFR Part 15 C Section 15.247 (a)(1), (h) requirement:						
The system shall hop to cha	nnel frequencies that are selected at the system hopping						
rate from a Pseudorandom o	ordered list of hopping frequencies. Each frequency must be used equally						
on the average by each trans	smitter. The system receivers shall have input bandwidths that match the						
hopping channel bandwidths	of their corresponding transmitters and shall shift frequencies in						
synchronization with the tran	smitted signals.						
channels during each transmission bursts must be designed to presented with a continuous transmission bursts must continue transmissions over the mission of intelligent to recognize other us chooses and adapts its hops of frequency hopping system	spectrum systems are not required to employ all available hopping nission. However, the system, consisting of both the transmitter and the o comply with all of the regulations in this section should the transmitter be data (or information) stream. In addition, a system employing short mply with the definition of a frequency hopping system and must distribute inimum number of hopping channels specified in this section. Ence within a frequency hopping spread spectrum system that permits the sers within the spectrum band so that it individually and independently sets to avoid hopping on occupied channels is permitted. The coordination in any other manner for the express purpose of avoiding the individual hopping frequencies by multiple transmitters is not permitted.						
Compliance for section 15	.247(a)(1)						
According to Bluetooth Co	re Specification, the pseudorandom sequence may be generated in a						
-	nine-stage shift register whose 5th and 9th stage

Report No.: GZEM150500232201 39 of 64 Page:

An example of Pseudorandom Frequency Hopping Sequence as follow:

20	62	46	77			7	64		8	73				16	75	1
				 	 		Γ	5	1		r	 	 			
						1		1	1		}			i		
						1			1		[
				 	 	L			<u></u>	L	}	 	 	<u> </u>		

Each frequency used equally on the average by each transmitter.

According to Bluetooth Core Specification, Bluetooth receivers are designed to have input and IF bandwidths that match the hopping channel bandwidths of any Bluetooth transmitters and shift frequencies in synchronization with the transmitted signals.

Compliance for section 15.247(g)

According to Bluetooth Core Specification, the Bluetooth system transmits the packet with the pseudorandom hopping frequency with a continuous data and the short burst transmission from the Bluetooth system is also transmitted under the frequency hopping system with the pseudorandom hopping frequency system.

Compliance for section 15.247(h)

According to Bluetooth Core specification, the Bluetooth system incorporates with an adaptive system to detect other user within the spectrum band so that it individually and independently to avoid hopping on the occupied channels.

According to the Bluetooth Core specification, the Bluetooth system is designed not have the ability to coordinated with other FHSS System in an effort to avoid the simultaneous occupancy of individual hopping frequencies by multiple transmitter.

7.8 Maximum Peak Output Power

Test Requirement:	FCC Part 15 C section 15.247 (b)(1)For frequency hopping systems operating in the 2400-2483.5 MHz band employing at least 75 non-overlapping hopping channels, and all frequency hopping systems in the 5725-5850 MHz band: 1 watt. For all other frequency hopping systems in the 2400-2483.5 MHz band: 0.125 watts. Refer to the result "Hopping channel number" of this document. The 1 watt (30.0 dBm) limit applies.
Test Method: Test Limit:	ANSI C63.10: Clause 6.10.1
Test mode:	Pre-test the EUT in continuous transmitting mode at the lowest (2402 MHz), middle (2441 MHz) and highest (2480 MHz) channel with different data packet. Compliance test in continuous transmitting mode with normal (DH5) and EDR mode (3DH5) as the worst case was found. Pre-test the EUT in AC mode and B/O mode, find worse case in B/O mode.

Test Configuration:

Ground Reference Plane

Test Procedure:

- 1. Remove the antenna from the EUT and then connect a low attenuation RF cable from the antenna port to the spectrum.
- 2. Set the spectrum analyzer: RBW = 2 MHz. VBW = 2 MHz. Sweep = auto; Detector Function = Peak.
- 3. Keep the EUT in transmitting at lowest, medium and highest channel individually. Record the max value.

Report No.: GZEM150500232201 Page: 41 of 64

Test Result:				
Normal mode:				
Test Channel	Fundamental Frequency (MHz)	Output Power (dBm)	Limit (dBm)	Result
Lowest	2402	3.23	30.0	Pass
Middle	2441	2.72	30.0	Pass
Highest	2480	3.31 30.0		Pass
EDR mode:				
Test Channel	Fundamental Frequency (MHz)	Output Power (dBm)	Limit (dBm)	Result
Lowest	2402	3.23	30.0	Pass
Middle	2441	2.72	30.0	Pass
Highest	2480	3.30	30.0	Pass
Remark: cable lo	se=1.0 dB			
Test result: The ι	init does meet the F	CC requirements.

7.9 Conducted Spurious Emissions

Test Requirement:	FCC Part15 C section 15.247
	(d) In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating. The radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power. Based on either an RF conducted or a radiated measurement. Provided the transmitter demonstrates compliance with the peak conducted power limits.
Test Method:	ANSI C63.10: Clause 6.7
Test Status:	Pre-test the EUT in continuous transmitting mode at the lowest (2402 MHz), middle (2441 MHz) and highest (2480 MHz) channel with different data packet. Compliance test in continuous transmitting mode with normal mode (DH5) as the worst case was found. Pre-test the EUT in AC mode and B/O mode, find worse case in B/O mode.

Test Configuration:

Test Procedure:

1. Remove the antenna from the EUT and then connect a low attenuation RF cable from the antenna port to the spectrum.

2. Set the spectrum analyzer: RBW = 100 kHz. VBW >= RBW. Sweep = auto; Detector Function = Peak (Max. hold).

7.10 Radiated Emissions which fall in the restricted bands

Test Requirement:	FCC Part15 C Section 15.247
	(d) In addition, radiated emissions which fall in the restricted bands. as defined in Section 15.205(a), must also comply with the radiated emission limits specified in Section 15.209(a) (see Section 15.205(c)).
Test Method:	ANSI C63.10: Clause 6.4, 6.5 and 6.6
Test Status:	Pre-test the EUT in continuous transmitting mode at the lowest (2402 MHz), middle (2441 MHz) and highest (2480 MHz) channel with different data packet. Compliance test in continuous transmitting mode with normal mode (DH5) as the worst case was found.
	Pre-test the EUT in AC mode and B/O mode, find worse case in B/O mode.
Measurement Distance:	3m (Semi-Anechoic Chamber)
Limit:	Section 15.209(a)
	40.0 dBµV/m between 30MHz & 88MHz;
	43.5 dB μ V/m between 88MHz & 216MHz;
	46.0 dB μ V/m between 216MHz & 960MHz;
	54.0 dBµV/m above 960MHz.
Detector:	For PK value:
	RBW = 1 MHz for $f \ge 1$ GHz, 100 kHz for $f < 1$ GHz
	VBW ≥ RBW Sweep = auto
	Detector function = peak
	Trace = max hold
	For AV value:
	RBW = 1 MHz for $f \ge 1$ GHz,
	VBW =10 Hz
	Sweep = auto
	Detector function = peak Trace = max hold
Test Frequency Range	30M~26GHz

Report No.: GZEM150500232201 Page: 52 of 64

30MHz~1000 MHz Field Strength of Unwanted Emissions. Quasi-Peak Measurement

The measurements with Log antenna were greater than 20dB below the limit, so the test data were not recorded in the test report.

Test Result:

1. Lowest Channel

Peak Measurement:

Frequency (MHz)	Antenna factors (dB/m)	Cable loss (dB)	Preamp factor (dB)	Reading Level (dBμV)	Emission Level (dBµV/m)	Limit (dBµV/m)	Antenna polarization
2310.000	27.93	8.02	38.23	43.00	40.72	74.00	V

7.11 Band Edges Requirement

Test Requirement:	FCC Part15 C section 15.247 (d) In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in Section 15.209(a) is not required. In addition, radiated emissions which fall in the radiated emission limits specified in Section 15.209(a) (see Section 15.205(c)).
Frequency Band:	2400 MHz to 2483.5 MHz
Test Method:	ANSI C63.10: Clause 6.10.5.2
Test Status:	Pre-test the EUT in continuous transmitting mode at the lowest (2402 MHz), and highest (2480 MHz) channel and hopping mode with different data packet. Compliance test in continuous transmitting mode with normal (DH5) and EDR mode (3DH5) as the worst case was found. Pre-test the EUT in AC mode and B/O mode, find worse case in B/O mode.

Test Configuration:

Ground Reference Plane

Test Procedure:

Use the following spectrum analyzer settings:

Span = 10MHz (wide enough to capture the peak level of the emission operating on the channel closest to the bandedge, as well as any modulation products which fall outside of the authorized band of operation.) RBW = 100 kHz (1% of the span) and VBW = 300 kHz

Sweep = auto

Detector function = peak

Trace = max hold

Report No.: GZEM150500232201 Page: 57 of 64

Test Result:

Compare with the output power of the lowest frequency, the Lower Edges attenuated more than 20dB Compare with the output power of the highest frequency, the Upper Edges attenuated more than 20dB. **Normal mode: DH5**

7.12 Conducted Emissions at Mains Terminals 150 kHz to 30 MHz

Test Requirement:	FCC Part 15 C section 15.207
Test Method:	ANSI C63.10: Clause 6.2
Frequency Range:	150 kHz to 30 MHz
Detector:	Peak for pre-scan (9 kHz Resolution Bandwidth)

Test Limit

Limits for conducted disturbance at the mains ports of class B

Frequency Range	Class B Limit dB(µV)		
(MHz)	Quasi-peak	Average	
0.15 to 0.50	66 to 56	56 to 46	
0.50 to 5	56	46	
5 to 30	60	50	

NOTE 1 The limit decreases linearly with the logarithm of the frequency in the range 0,15 MHz to 0,50 MHz.

EUT Operation: Test in normal operating mode. For intentional radiators, measurements of the variation of the input power or the radiated signal level of the fundamental frequency component of the emission, as appropriate, shall be performed with the supply voltage varied between 85% and 115% of the nominal rated supply voltage.

Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations, data rates and antenna ports (if EUT with antenna diversity architecture).

Report No.: GZEM150500232201 Page: 62 of 64

Test Configuration:

Test procedure:

1. The mains terminal disturbance voltage test was conducted in a shielded room.

2. The EUT was connected to AC power source through a LISN 1 (Line Impedance Stabilization Network) which provides a $50\Omega/50\mu$ H + 5Ω linear impedance. The power cables of all other units of the EUT were connected to a second LISN 2, which was bonded to the ground reference plane in the same way as the LISN 1 for the unit being measured. A multiple socket outlet strip was used to connect multiple power cables to a single LISN provided the rating of the LISN was not exceeded.

3. The tabletop EUT was placed upon a non-metallic table 0.8m above the ground reference plane. And for floor-standing arrangement, the EUT was placed on the horizontal ground reference plane, but separated from metallic contact with the ground reference plane by 0.1m of insulation.

4. The test was performed with a vertical ground reference plane. The rear of the EUT shall be 0,4 m from the vertical ground reference plane. The vertical ground reference plane was bonded to the horizontal ground reference plane. The LISN 1 was placed 0,8 m from the boundary of the unit under test and bonded to a ground reference plane for LISNs mounted on top of the ground reference plane. This distance was between the closest points of the LISN 1 and the EUT. All other units of the EUT and associated equipment was at least 0,8 m from the LISN 2.

Report No.: GZEM150500232201 Page: 63 of 64

7.12.1 Measurement Data

An initial pre-scan was performed on the live and neutral lines with peak detector. Quasi-Peak and Average measurement were performed at the frequencies with maximized peak emission were detected. For EUT the communicating was worst case mode.

The following Quasi-Peak and Average measurements were performed on the EUT: Neutral Line Level($dB\mu V$)

Measure data:

Freq	Read Level	Cable Loss	LISN Factor	Level	Limit Line	Over Limit	Remark
