Federal Communications Commission  
7435 Oakland Mills Road  
Columbia, MD 21046

To whom it may concern:

Avnet Inc., hereby requests a Permissive Change Class II of the radio equipment certification for the Azure Sphere Chip Module certification number, FCC ID: 2AF62-AVT3620C. This product differs from the originally approved product in the following manner:

- (a) Associated digital circuitry. – No changes to this section.
- (b) Functional capabilities. – Add U-NII-2A and U-NII-2C bands.
- (c) Antenna Characteristics. – No changes to this section.
- (d) Cosmetic differences – No changes to this section.
- (e) Other – No hardware changes made, the software was changed.

I do attest that the Field strength and/or RF Output readings remained the same or are lower than the originally approved product and that they did not increase therefore qualifying this product for this application type. There was no hardware changed and this is a software/firmware-only modification.

Sincerely,

Arnie Grever  
Vice President – Global Design Solutions Avnet
