# **FCC Test Report**

Report No.: AGC10084170401FE08

**FCC ID** : 2AF6M3396993X501

**APPLICATION PURPOSE**: Original Equipment

**PRODUCT DESIGNATION**: 3G Smart Phone

BRAND NAME : Cellacom

**MODEL NAME** : X501 Prime

**CLIENT** : Mobile commodity corporation

**DATE OF ISSUE** : May. 04, 2017

STANDARD(S) FCC Part 15.247

TEST PROCEDURE(S) KDB 558074 v03r02

**REPORT VERSION**: V1.0

Attestation of Global Compliance (Shenzhen) Co., Ltd

#### **CAUTION:**

This report shall not be reproduced except in full without the written permission of the test laboratory and shall not be quoted out of context.

#### **WE HEREBY CERTIFY THAT:**

The above equipment was tested by Dongguan Precise Testing Service Co., Ltd. The test data, data evaluation, test procedures, and equipment configurations shown in this report were made in accordance with the procedures given in ANSI C63.10 (2013) and the energy emitted by the sample EUT tested as described in this report is in compliance with requirement of FCC Part 15 Rules requirement.

## 2.GENERAL INFORMATION 2.1PRODUCT DESCRIPTION

The EUT is designed as "Tablet". It is designed by way of utilizing the FHSS technology to achieve the system operation.

A major technical description of EUT is described as following

| Operation Frequency | 2.402 GHz to 2.480GHz                                |
|---------------------|--|
| Bluetooth Version   | V4.0   |
| Modulation          | GFSK   |
| Number of channels  | 40 Channel(37 Hopping Channel,3 advertising Channel) |
| Antenna Designation | PIFA Antenna   |
| Antenna Gain        | 1.23dBi  |
| Hardware Version    | Y813   |
| Software Version    | Cellacom_X501 Prime_V0.3_04272017                    |
| Power Supply        | DC3.8V by Built-in Li-ion Battery                    |

#### 2.2 RELATED SUBMITTAL(S)/GRANT(S)

This submittal(s) (test report) is intended for **FCC ID: 2AF6M3396993X501** filing to comply with Section 15.247of the FCC Part 15, Subpart C Rules.

#### 2.3TEST METHODOLOGY

All measurements contained in this report were conducted with KDB 558074 D01 DTS Meas Guidance v03r02, American National Standard for Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the range of 9 kHz to 40 GHz.

The equipment under test (EUT) was configured to measure its highest possible emission level. The test modes were adapted accordingly in reference to the Operating Instructions. The EUT was tested in all three orthogonal planes and the worse case was showed.

#### 2.4 TEST FACILITY

| Site Dongguan Precise Testing Service Co., Ltd. |   |  |
|---|---|--|
| Location  | Building D,Baoding Technology Park,Guangming Road2,Dongcheng District, Dongguan, Guangdong, China,      |  |
| FCC Registration No.                            | 371540  |  |
| Description                                     | The test site is constructed and calibrated to meet the FCC requirements in documents ANSI C63.10:2013. |  |

#### 2.5 SPECIAL ACCESSORIES

Refer to section 2.2.

#### 2.6 EQUIPMENT MODIFICATIONS

Not available for this EUT intended for grant.

## 4. SUMMARY OF TEST RESULTS

| FCC RULES             | DESCRIPTION OF TEST                             | RESULT    |
|-----------------------|---|-----------|
| § 15.203              | Antenna Requirement                             | Compliant |
| §15.209<br>§15.247(d) | Radiated Emission                               | Compliant |
| §15.247(d)            | Band Edges                                      | Compliant |
| §15.247               | 6 dB Bandwidth                                  | Compliant |
| §15.247(b)            | Conducted Power                                 | Compliant |
| §15.247(e)            | Maximum Conducted Output Power SPECTRAL Density | Compliant |
| §15.207               | Line Conduction Emission                        | Compliant |
| §15.207               | Conduction Emission                             | Compliant |

## 5. DESCRIPTION OF TEST MODES

The EUT has been operated in three modulations: GFSK independently.

| NO. | TEST MODE DESCRIPTION |
|-----|-----------------------|
| 1   | Low channel TX        |
| 2   | Middle channel TX     |
| 3   | High channel TX       |
| 4   | Normal Operating (BT) |

#### Note:

- 1. All the test modes can be supply by Built-in Li-ion battery, only the result of the worst case was recorded in the report if no any records.
- 2. For Radiated Emission, 3axis were chosen for testing for each applicable mode.
- 3. Eut is operating at its maximum duty cycle>or equal 98%

Page 10 of 31

#### 6. ANTENNA REQUIREMENT

#### **6.1. STANDARD APPLICABLE**

According to FCC 15.203, An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this Section. The manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited. This requirement does not apply to carrier current devices or to devices operated under the provisions of Sections 15.211, 15.213, 15.217, 15.219, or 15.221. Further, this requirement does not apply to intentional radiators that must be professionally installed, such as perimeter protection systems and some field disturbance sensors, or to other intentional radiators which, in accordance with Section 15.31(d), must be measured at the installation site. However, the installer shall be responsible for ensuring that the proper antenna is employed so that the limits in this Part are not exceeded.

#### **6.2. TEST RESULT**

This product has a permanent antenna, fulfill the requirement of this section.

Page 11 of 31

## 7. RADIATED EMISSION 7.1 MEASUREMENT PROCEDURE

 Configure the EUT according to ANSI C63.10. The EUT was placed on the top of the turntable 0.8 meter above ground. The phase center of the receiving antenna mounted on the top of a height-variable antenna tower was placed 3 meters far away from the turntable.

- 2. Power on the EUT and all the supporting units. The turntable was rotated by 360 degrees to determine the position of the highest radiation.
- 3. The height of the broadband receiving antenna was varied between one meter and four meters above ground to find the maximum emissions field strength of both horizontal and vertical polarization.
- 4. For each suspected emissions, the antenna tower was scan (from 1 M to 4 M) and then the turntable was rotated (from 0 degree to 360 degrees) to find the maximum reading.
- 5. Set the test-receiver system to Peak or CISPR quasi-peak Detect Function with specified bandwidth under Maximum Hold Mode.
- 6. For emissions above 1GHz, use 1MHz VBW and RBW for peak reading. Then 1MHz RBW and 10Hz VBW for average reading in spectrum analyzer. The EUT was placed on the top of the turntable 1.5 meter above ground. The phase center of the receiving antenna mounted on the top of a height-variable antenna tower was placed 3 meters far away from the turntable.
- 7. When the radiated emissions limits are expressed in terms of the average value of the emissions, and pulsed operation is employed, the measurement field strength shall be determined by averaging over one complete pulse train, including blanking intervals, as long as the pulse train does not exceed 0.1 seconds. As an alternative (provided the transmitter operates for longer than 0.1 seconds) or in cases where the pulse train exceeds 0.1 seconds, the measured field strength shall be determined from the average absolute voltage during a 0.1 second interval during which the field strength is at its maximum values.
- 8.If the emissions level of the EUT in peak mode was 3 dB lower than the average limit specified, then testing will be stopped and peak values of EUT will be reported, otherwise, the emissions which do not have 3 dB margin will be repeated one by one using the quasi-peak method for below 1GHz.
- 9. For testing above 1GHz, the emissions level of the EUT in peak mode was lower than average limit (that means the emissions level in peak mode also complies with the limit in average mode), then testing will be stopped and peak values of EUT will be reported, otherwise, the emissions will be measured in average mode again and reported.
- 10. In case the emission is lower than 30MHz, loop antenna has to be used for measurement and the recorded data should be QP measured by receiver. High Low scan is not required in this case.

#### 7.2 TEST SETUP

## RADIATED EMISSION TEST SETUP 30MHz-1000MHz

## RADIATED EMISSION TEST SETUP ABOVE 1000MHz

Page 13 of 31

## 7.3 LIMITS AND MEASUREMENT RESULT

15.209 Limit in the below table has to be followed

| Frequencies<br>(MHz) | Field Strength (micorvolts/meter) | Measurement Distance (meters) |
|----------------------|-----------------------------------|-------------------------------|
| 0.009~0.490          | 2400/F(KHz)                       | 300                           |
| 0.490~1.705          | 24000/F(KHz)                      | 30                            |
| 1.705~30.0           | 30                                | 30                            |
| 30~88                | 100                               | 3                             |
| 88~216               | 150                               | 3                             |
| 216~960              | 200                               | 3                             |
| Above 960            | 500                               | 3                             |

Note: All modes were tested For restricted band radiated emission,

the test records reported below are the worst result compared to other modes.

#### 7.4 TEST RESULT

#### **RADIATED EMISSION BELOW 30MHZ**

No emission found between lowest internal used/generated frequencies to 30MHz.

Page 14 of 31

#### **RADIATED EMISSION BELOW 1GHZ**

## RADIATED EMISSION TEST- (30MHZ-1GHZ) -HORIZONTAL

**RESULT: PASS** 

Page 15 of 31

## RADIATED EMISSION TEST- (30MHZ-1GHZ) -VERTICAL

**RESULT: PASS** 

Note: 1. Factor=Antenna Factor + Cable loss, Margin=Measurement-Limit.

- 2. The "Factor" value can be calculated automatically by software of measurement system.
- 3. All test modes had been pre-tested. The GFSK mode at low channel is the worst case and recorded in the report.

Page 16 of 31

**RESULT: PASS** 

Note: 1~25GHz scan with GFSK. No recording in the test report at least have 20dB margin.

Factor = Antenna Factor + Cable Loss – Pre-amplifier.

Emission Level = Meter Reading + Factor

Margin = Emission - Leve Limit

Page 17 of 31

#### 8. BAND EDGE EMISSION

#### **8.1. MEASUREMENT PROCEDURE**

1)Radiated restricted band edge measurements

The radiated restricted band edge measurements are measured with an EMI test receiver connected to the receive antenna while the EUT is transmitting

- 2)Conducted Emissions at the bang edge
  - a)The transmitter output was connected to the spectrum analyzer
  - b)Set RBW=100kHz,VBW=300kHz
  - c)Suitable frequency span including 100kHz bandwidth from band edge

#### 8.2. TEST SET-UP

Radiated same as 6.2

Conducted set up

Page 18 of 31

## **RESULT: PASS**

Note: Factor=Antenna Factor + Cable loss - Amplifier gain,

Emission Level = Meter Reading + Factor

Margin= Emission Level -Limit.

The "Factor" value can be calculated automatically by software of measurement system.

8.4. Conducted Test Result Test Graph

Page 20 of 31

## 9. 6DB BANDWIDTH

#### 9.1. TEST PROCEDURE

- 1. Connect EUT RF output port to the Spectrum Analyzer through an RF attenuator
- 2. Set the EUT Work on the top, the middle and the bottom operation frequency individually.
- 3. Set SPA Centre Frequency = Operation Frequency, RBW= 100 KHz, VBW≥RBW.
- 4. Set SPA Trace 1 Max hold, then View.

#### 9.2. SUMMARY OF TEST RESULTS/PLOTS

| Mode | Channel | 6dB Bandwidth [KHz] | Verdict |
|------|---------|---------------------|---------|
| BLE  | LCH     | 706.7               | PASS    |
| BLE  | MCH     | 707.2               | PASS    |
| BLE  | НСН     | 707.2               | PASS    |

## **Test Graph**

Page 21 of 31

#### 10. CONDUCTED OUTPUT POWER

#### 10.1. MEASUREMENT PROCEDURE

- 1. Connect EUT RF output port to the Spectrum Analyzer through an RF attenuator
- 2. Set the EUT Work on the top, middle and the bottom operation frequency individually.
- 3. Use the following spectrum analyzer settings:

Set the RBW ≥ DTS bandwidth

Set the VBW ≥ 3 x RBW

Set the span  $\geq$  3 x RBW

Detector = peak

Sweep time = auto couple

Trace mode = max hold

- 4. Allow the trace to stabilize. Use peak marker function to determine the peak amplitude level
- 5. Record the result form the Spectrum Analyzer.

Note: The EUT was tested according to KDB 558074 for compliance to FCC 47CFR 15.247 requirements.

## 10.2. TEST SET-UP (BLOCK DIAGRAM OF CONFIGURATION)

#### 10.3. LIMITS AND MEASUREMENT RESULT

| Channel        | Peak Power<br>(dBm) | Applicable Limits (dBm) | Pass/Fail |
|----------------|---------------------|-------------------------|-----------|
| Low Channel    | -2.554              | 20                      | Pass      |
| Middle Channel | -2.270              | 20                      | Pass      |
| High Channel   | -2.652              | 20                      | Pass      |

Page 22 of 31

## 11. MAXIMUM CONDUCTED OUTPUT POWER SPECTRAL DENSITY 11.1 MEASUREMENT PROCEDURE

- (1). Connect EUT RF output port to the Spectrum Analyzer through an RF attenuator
- (2). Set the EUT Work on the top, the middle and the bottom operation frequency individually.
- (3). Set SPA Trace 1 Max hold, then View.

Note: The EUT was tested according to KDB 558074 for compliance to FCC 47CFR 15.247 requirements.

## 11.2 TEST SET-UP (BLOCK DIAGRAM OF CONFIGURATION)

#### 11.3 LIMITS AND MEASUREMENT RESULT

## 12. FCC LINE CONDUCTED EMISSION TEST

#### **12.1 LIMITS**

| Fraguancy     | Maximum RF Line Voltage |                |  |  |  |  |
|---------------|-------------------------|----------------|--|--|--|--|
| Frequency     | Q.P.( dBuV)             | Average( dBuV) |  |  |  |  |
| 150kHz~500kHz | 66-56                   | 56-46          |  |  |  |  |
| 500kHz~5MHz   | 56                      | 46             |  |  |  |  |
| 5MHz~30MHz    | 60                      | 50             |  |  |  |  |

<sup>\*\*</sup>Note: 1. The lower limit shall apply at the transition frequency.

#### **12.2 TEST SETUP**

Remark E.U.T: Equipment Under Test LISN: Line Impedence Stabilization Network Test table height=0.8m

<sup>2.</sup> The limit decreases linearly with the logarithm of the frequency in the range 0.15 MHz to 0.50 MHz

Page 24 of 31

#### 12.3 PRELIMINARY PROCEDURE

- The equipment was set up as per the test configuration to simulate typical actual usage per the user's manual. When the EUT is a tabletop system, a wooden table with a height of 0.8 meters is used and is placed on the ground plane as per ANSI C63.10 (see Test Facility for the dimensions of the ground plane used). When the EUT is a floor-standing equipment, it is placed on the ground plane which has a 3-12 mm non-conductive covering to insulate the EUT from the ground plane.
- 2) Support equipment, if needed, was placed as per ANSI C63.10.
- 3) All I/O cables were positioned to simulate typical actual usage as per ANSI C63.10.
- 4) All support equipments received AC120V/60Hz power from a LISN, if any.
- 5) The EUT received power by adapter which received power by a LISN.
- 6) The test program was started. Emissions were measured on each current carrying line of the EUT using a spectrum Analyzer / Receiver connected to the LISN powering the EUT. The LISN has two monitoring points: Line 1 (Hot Side) and Line 2 (Neutral Side). Two scans were taken: one with Line 1 connected to Analyzer / Receiver and Line 2 connected to a 50 ohm load; the second scan had Line 1 connected to a 50 ohm load and Line 2 connected to the Analyzer / Receiver.
- 7) Analyzer / Receiver scanned from 150 kHz to 30MHz for emissions in each of the test modes.
- 8) During the above scans, the emissions were maximized by cable manipulation.
- 9) The following test mode(s) were scanned during the preliminary test. Then, the EUT configuration and cable configuration of the above highest emission level were recorded for reference of final testing.

#### **12.4 FINAL TEST PROCEDURE**

- 10) EUT and support equipment was set up on the test bench as per step 2 of the preliminary test.
- 11) 2) A scan was taken on both power lines, Line 1 and Line 2, recording at least the six highest emissions. Emission frequency and amplitude were recorded into a computer in which correction factors were used to calculate the emission level and compare reading to the applicable limit. If EUT emission level was less –2dB to the A.V. limit in Peak mode, then the emission signal was re-checked using Q.P and Average detector.
- 12) 3) The test data of the worst case condition(s) was reported on the Summary Data page.

#### 13. CONDUCTED SPURIOUS EMISSION

#### 13.1. MEASUREMENT PROCEDURE

- 1. Connect EUT RF output port to the Spectrum Analyzer through an RF attenuator
- 2. Set the EUT Work on the top, the Middle and the bottom operation frequency individually.
- 3. Set the Span = wide enough to capture the peak level of the in-band emission and all spurious emissions from the lowest frequency generated in the EUT up through the 10th harmonic.
  - RBW = 100 kHz; VBW ≥ RBW; Sweep = auto; Detector function = peak.
- 4. Set SPA Trace 1 Max hold, then View.

**Note:** The EUT was tested according to DA000705 for compliance to FCC 47CFR 15.247 requirements. Owing to satisfy the requirements of the number of measurement points, we set the RBW=1MHz, VBW>RBW, scan up through 10th harmonic, and consider the tested results as the worst case, if the tested results conform to the requirement, we can deem that the real tested results(set the RBW=100KHz, VBW>RBW) are conform to the requirement.

#### 13.2. TEST SET-UP (BLOCK DIAGRAM OF CONFIGURATION)

The same as described in section 8.2

#### 13.3. MEASUREMENT EQUIPMENT USED

The same as described in section 6
