#### 11 Controller Gyroscope/ 3D Joystick/ Trigger Calibration

When the gyroscope function is abnormal, the joystick drifts off-center, or the trigger values are inaccurate, you can use the controller calibration function.

- ① In the powered-on state, Press the [ + ] button on the controller for 3 seconds to enter the calibration mode. The four channel lights will flash alternately in two groups.
- ② Simultaneously move both joysticks in circles 2-3 times, ensuring the joysticks hit their edges, then press each trigger fully down twice.
- ③ Next, place the controller horizontally and press the [ ] button. After releasing the buttons for 3 seconds, the sensor calibration and 3D joystick calibration will automatically complete, and the controller will return to normal working state.

#### 12 Macro Function

Programmable action buttons: left joystick (up/ down/ left/ right), right joystick (up/ down/ left/ right), D-pads (up/ down/ left/ right), ABXY, LB/ RB, LT/ RT, L3/ R3, + .

- ① Press the [ ] button and any M button at the same time. When the light turns white and flashes, the controller is in programming mode.
- ② Press the needed action buttons. After editing, press the M button again. The [ ] light will return to its original state. Each macro can program up to 32 action buttons, and if the number of action buttons exceeds 32, programming will automatically end; each button can be sustained for a maximum of 2 minutes. If no operations are performed in programming mode for over 2 minutes, the controller will automatically exit programming.
- ③ Cancel macro: press the corresponding M button during macro execution, the current macro will be immediately canceled. After canceling, pressing the M button again will restart the macro from the beginning of the first action.

11 - English

#### 13 Charging Function

- ① Charging Power: standard 5V voltage USB. The controller can be charged by connecting the USB port of phone charger, computer, etc. Fully-charged will take about 2-3 hours.
- ② When the controller wakes from sleep mode to enter pairing mode, the channel lights will briefly indicate battery status.
- ③ The channel lights will flash when the battery is low.
- ④ While charging, the [ ] light will breathe slowly. When it is fully-charged, the [ ] light will stay on.

#### 14 Reset Function

- ① Hardware Reset: If the controller experiences functionality issues, freezes, or other abnormalities, press and hold the [ ] button for 10 seconds to force the controller to shut down.
- ② Software Reset: Press and hold the [ + ] buttons for 3 seconds to restore the controller to factory settings. The controller will vibrate once, and the [ ] light will flash for 1 second to indicate a successful reset. The controller will then enter lock mode, and a short press of the [ ] button will not wake it up. To use the controller again, press and hold the [ ] button for 3 seconds to power it on and re-pair it.

#### 15 Sleep Function

Controller State	Enter Sleep State
Re-connect State	60 seconds without connection
First Pairing State	60 seconds without connection
Working State (Default)	5 minutes without any action and move

12 - English

#### 16 Product Specifications

Model	P5
Connection	Wireless/ Wired Connection
Power Supply	Built-in 1000mAh lithium battery
Operating Current	35mA during operation, < 120mA during vibration
Product Dimensions	About 155 * 106 * 59 mm
Packaging Dimensions	About 174 * 129 * 73 mm
Product Weight	About 221 g
Operating Temperature	10 ~ 40°C
Operating Humidity	20 ~ 80%

#### ⚠ Warning

- Avoid strong vibration, do not disassemble, modify or repair by yourself.
- Prevent water or other liquids from entering the product to avoid damage.
- Avoid storing in damp, high-temperature, or smoky environment.
- Built-in battery, please do not throw the product into fire to avoid explosion.
- Children should use this product under adult supervision.
- If you have any problems or suggestions about the product, please contact the seller or the after-services team.

FCC Caution:

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception,

which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

-- Reorient or relocate the receiving antenna.

-- Increase the separation between the equipment and receiver.

-- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

-- Consult the dealer or an experienced radio/TV technician for help.

The device has been evaluated to meet general RF exposure requirement. The device can be used in portable exposure condition without restriction.
