### FCC REPORT

| Application No.: | SZEM1704003120CR  |
|------------------|---|
| Applicant:       | Spigen Koren Co.,Ltd  |
| Manufacturer:    | Winners'Sun Plastic & Electronic (Shenzhen) Co., Ltd            |
| Factory:         | Winners'Sun Plastic & Electronic (Shenzhen) Co., Ltd            |
| Product Name:    | Velo <sup>™</sup> Wireless Selfie Stick                         |
| Model No.(EUT):  | S530W   |
| Trade Mark:      | Velo <sup>TM</sup>  |
| FCC ID:          | 2AFKNS530W  |
| Standards:       | 47 CFR Part 15, Subpart C (2015)                                |
| Date of Receipt: | 2016-11-21(for original report SZEM161100983901)                |
| Date of Test:    | 2016-12-21 to 2016-12-23 (for original report SZEM161100983901) |
| Date of Issue:   | 2017-01-19 (for original report SZEM161100983901)               |
|                  | 2017-04-18(for new report SZEM170400312001)                     |
| Test Result:     | PASS *  |

\* In the configuration tested, the EUT complied with the standards specified above.

Authorized Signature:

Jack Zhang EMC Laboratory Manager

The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in this report. If the product in this report is used in any configuration other than that detailed in the report, the manufacturer must ensure the new system complies with all relevant standards. Any mention of SGS International Electrical Approvals or testing done by SGS International Electrical Approvals in connection with, distribution or use of the product described in this report must be approved by SGS International Electrical Approvals in writing.

### 5 General Information

#### 5.1 Client Information

| Applicant:               | Spigen Koren Co.,Ltd  |  |
|--------------------------|---|--|
| Address of Applicant:    | No.1709 STX-V TOWER, 371-37, GASAN-DONG, GEUMCHEON-GU, SEOUL, KOREA                                     |  |
| Manufacturer:            | Winners'Sun Plastic & Electronic (Shenzhen) Co., Ltd  |  |
| Address of Manufacturer: | rer: E Zone, Yingtai Industrial Park, Dalang South Road, Dalang Stre<br>Baoan District, Shenzhen, China |  |
| Factory:                 | Winners'Sun Plastic & Electronic (Shenzhen) Co., Ltd  |  |
| Address of Factory:      | E Zone, Yingtai Industrial Park, Dalang South Road, Dalang Street, Baoan District, Shenzhen, China      |  |

#### 5.2 General Description of EUT

| Product Name:        | Saint Angelo Bluetooth Selfie Stick                 |
|----------------------|---|
| Model No.:           | WS-SQB908B  |
| Trade Mark:          | Dispho  |
| Operation Frequency: | 2402MHz~2480MHz                                     |
| Bluetooth Version:   | V3.0  |
| Modulation Type:     | GFSK  |
| Number of Channel:   | 79  |
| Antenna Type:        | Inverted F  |
| Antenna Gain:        | 0dBi  |
| Battery:             | Rechargeable battery: DC 3.7V 60mAh (Charge by USB) |
| Test voltage:        | AC 120V 60Hz  |

Remark:

Original model No. in report SZEM161100983901: WS-SQB908B

There are three colors for WS-SQB908B, only the sample WS-SQB908B with blue was tested in original report SZEM161100983901, since the electrical circuit design, layout, components used, internal wiring and functions were identical for all the above samples, only different on colors. New model No. in report SZEM170400312001:S530W

This report was an additional report copied from the report SZEM161100983901, just changed the information of applicant, product name, model No. and trade mark. Since the electrical circuit design, layout, components used and internal wiring for the model in the report SZEM161100983901 was exactly the same as the model in this report, only different on model name.

Additionally, just updated the below standards.

Original report standard

The newest report standard

47 CFR Part 15, Subpart C (2015)

47 CFR Part 15, Subpart C (2016)

Reviewed the updated standards, all the technical requirements for the EUT are identical between the original and the newest standards' version.

Therefore original data were kept in this report.

Report No.: SZEM161100983901 Page: 6 of 56

| Operation Frequency each of channel |           |         |           |         |           |         |           |

| 16                                  | 2418MHz   | 36      | 2438MHz   | 56      | 2458MHz   | 76      | 2478MHz   |
| 17                                  | 2419MHz   | 37      | 2439MHz   | 57      | 2459MHz   | 77      | 2479MHz   |
| 18                                  | 2420MHz   | 38      | 2440MHz   | 58      | 2460MHz   | 78      | 2480MHz   |
| 19                                  | 2421MHz   | 39      | 2441MHz   | 59      | 2461MHz   |         |           |

#### Note:

In section 15.31(m), regards to the operating frequency range over 10 MHz, the Lowest frequency, the middle frequency, and the highest frequency of channel were selected to perform the test, and the selected channel see below:

| Channel             | Frequency |
|---------------------|-----------|
| The Lowest channel  | 2402MHz   |
| The Middle channel  | 2441MHz   |
| The Highest channel | 2480MHz   |

Report No.: SZEM161100983901 Page: 7 of 56

#### 5.3 Test Environment

| Operating Environment: |           |  |
|------------------------|-----------|--|
| Temperature:           | 25.0 °C   |  |
| Humidity:              | 55 % RH   |  |
| Atmospheric Pressure:  | 1020 mbar |  |

#### 5.4 Description of Support Units

The EUT has been tested with associated equipment below.

| Description | Manufacturer  | Model No. |
|-------------|---------------|-----------|
| Laptop      | Lenovo        | T430u     |
| Test board  | Supply to SGS | FT232     |

#### 5.5 Test Location

All tests were performed at:

SGS-CSTC Standards Technical Services Co., Ltd., Shenzhen Branch

No. 1 Workshop, M-10, Middle Section, Science & Technology Park, Shenzhen, Guangdong, China. 518057.

Tel: +86 755 2601 2053 Fax: +86 755 2671 0594

No tests were sub-contracted.

Report No.: SZEM161100983901 Page: 8 of 56

#### 5.6 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

#### • CNAS (No. CNAS L2929)

CNAS has accredited SGS-CSTC Standards Technical Services Co., Ltd. Shenzhen Branch EMC Lab to ISO/IEC 17025:2005 General Requirements for the Competence of Testing and Calibration Laboratories (CNAS-CL01 Accreditation Criteria for the Competence of Testing and Calibration Laboratories) for the competence in the field of testing.

#### A2LA (Certificate No. 3816.01)

SGS-CSTC Standards Technical Services Co., Ltd., Shenzhen EMC Laboratory is accredited by the American Association for Laboratory Accreditation(A2LA). Certificate No. 3816.01.

#### • VCCI

The 10m Semi-anechoic chamber and Shielded Room of SGS-CSTC Standards Technical Services Co., Ltd. have been registered in accordance with the Regulations for Voluntary Control Measures with Registration No.: G-823, R-4188, T-1153 and C-2383 respectively.

#### FCC – Registration No.: 556682

SGS-CSTC Standards Technical Services Co., Ltd., Shenzhen EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files. Registration No.: 556682.

#### Industry Canada (IC)

Two 3m Semi-anechoic chambers and the 10m Semi-anechoic chamber of SGS-CSTC Standards Technical Services Co., Ltd. Shenzhen Branch EMC Lab have been registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing with Registration No.: 4620C-1, 4620C-2, 4620C-3.

#### 5.7 Deviation from Standards

None.

#### 5.8 Abnormalities from Standard Conditions

None.

#### 5.9 Other Information Requested by the Customer

None.

#### 5.10 Measurement Uncertainty

| 1 | Conduction emission  | 3.45dB (9kHz to 150kHz) |
|---|----------------------|-------------------------|
| 1 |                      | 3.0dB (150kHz to 30MHz) |
|   | De dista de missione | 4.5dB (30MHz-1GHz )     |
| 2 | Radiated emission    | 4.8dB (1GHz-6GHz )      |
| 3 | Temperature test     | 1℃                      |
| 4 | Humidity test        | 3%                      |
| 5 | DC power test        | 0.5 %                   |

Report No.: SZEM161100983901 Page: 14 of 56

#### **Measurement Data**

An initial pre-scan was performed on the live and neutral lines with peak detector.

Quasi-Peak and Average measurement were performed at the frequencies with maximized peak emission were detected.

Live line:

#### 6.10 Other requirements Frequency Hopping Spread Spectrum System

| Test Requirement:  | 47 CFR Part 15C Section 15.247 (a)(1), (h) requirement:   |  |  |  |  |  |  |  |
|--|---|--|--|--|--|--|--|--|
| rate from a Pseudorandom o<br>on the average by each trans<br>hopping channel bandwidths                                     | The system shall hop to channel frequencies that are selected at the system hopping rate from a Pseudorandom ordered list of hopping frequencies. Each frequency must be used equally on the average by each transmitter. The system receivers shall have input bandwidths that match the hopping channel bandwidths of their corresponding transmitters and shall shift frequencies in synchronization with the transmitted signals.   |  |  |  |  |  |  |  |
| channels during each transm<br>receiver, must be designed t<br>transmitter be presented with<br>employing short transmission | Frequency hopping spread spectrum systems are not required to employ all available hopping channels during each transmission. However, the system, consisting of both the transmitter and the receiver, must be designed to comply with all of the regulations in this section should the transmitter be presented with a continuous data (or information) stream. In addition, a system employing short transmission bursts must comply with the definition of a frequency hopping system and must distribute its transmissions over the minimum number of hopping channels specified in this section. |  |  |  |  |  |  |  |
| the system to recognize othe<br>independently chooses and<br>The coordination of frequence                                   | The incorporation of intelligence within a frequency hopping spread spectrum system that permits<br>the system to recognize other users within the spectrum band so that it individually and<br>independently chooses and adapts its hopsets to avoid hopping on occupied channels is permitted.<br>The coordination of frequency hopping systems in any other manner for the express purpose of<br>avoiding the simultaneous occupancy of individual hopping frequencies by multiple transmitters is<br>not permitted.   |  |  |  |  |  |  |  |
| Compliance for section 15.   | 247(a)(1)   |  |  |  |  |  |  |  |
| stage shift register whose 5th outputs are added in a modu   | lo-two addition stage. And the result is fed back to the input of the first with the first ONE of 9 consecutive ONEs; i.e. the shift register is initialized ges: 9 sequence: $2^9 - 1 = 511$ bits  |  |  |  |  |  |  |  |
|  |   |  |  |  |  |  |  |  |
| Linear Feedback S  | hift Register for Generation of the PRBS sequence   |  |  |  |  |  |  |  |
| An example of Pseudorando<br>20 62 46 77   | m Frequency Hopping Sequence as follow:<br>7 64 8 73 16 75 1  |  |  |  |  |  |  |  |
| According to Bluetooth Core<br>bandwidths that match the   | on the average by each transmitter.<br>Specification, Bluetooth receivers are designed to have input and IF<br>hopping channel bandwidths of any Bluetooth transmitters and shift<br>on with the transmitted signals.   |  |  |  |  |  |  |  |
| Compliance for section 15.   |   |  |  |  |  |  |  |  |

Report No.: SZEM161100983901 Page: 41 of 56

According to Bluetooth Core Specification, the Bluetooth system transmits the packet with the pseudorandom hopping frequency with a continuous data and the short burst transmission from the Bluetooth system is also transmitted under the frequency hopping system with the pseudorandom hopping frequency system.

#### Compliance for section 15.247(h)

According to Bluetooth Core specification, the Bluetooth system incorporates with an adaptive system to detect other user within the spectrum band so that it individually and independently to avoid hopping on the occupied channels.

According to the Bluetooth Core specification, the Bluetooth system is designed not have the ability to coordinated with other FHSS System in an effort to avoid the simultaneous occupancy of individual hopping frequencies by multiple transmitter.

|                   | Note: 15.35(b), Unless otherwise specified, the limit on peak radio f<br>emissions is 20dB above the maximum permitted average em<br>applicable to the equipment under test. This peak limit applies<br>peak emission level radiated by the device. |      |                                |                   |            |                          |   |  |  |  |

#### 6.11 Radiated Spurious Emission

Report No.: SZEM161100983901 Page: 43 of 56

Report No.: SZEM161100983901 Page: 44 of 56

|                        | <ul> <li>EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet.</li> <li>h. Test the EUT in the lowest channel (2402MHz),the middle channel (2441MHz),the Highest channel (2480MHz)</li> <li>i. The radiation measurements are performed in X, Y, Z axis positioning for Transmitting mode, and found the X axis positioning which it is the worst case.</li> </ul> |
|------------------------|--|
|                        | j. Repeat above procedures until all frequencies measured was complete.  |
| Exploratory Test Mode: | Non-hopping transmitting mode with all kind of modulation and all kind of data type  |
|                        | Transmitting mode, Charge + Transmitting mode.   |
| Final Test Mode:       | Through Pre-scan, find the DH1 of data type and GFSK modulation is the worst case.   |
|                        | Pretest the EUT at Transmitting mode and Charge + Transmitting mode, found the Charge + Transmitting mode which it is worse case   |
|                        | For below 1GHz part, through pre-scan, the worst case is the lowest channel.   |
|                        | Only the worst case is recorded in the report.   |
| Instruments Used:      | Refer to section 5.10 for details  |
| Test Results:          | Pass   |

#### Remark:

1) The field strength is calculated by adding the Antenna Factor, Cable Factor & Preamplifier. The basic equation with a sample calculation is as follows:

Final Test Level = Receiver Reading + Antenna Factor + Cable Factor – Preamplifier Factor

2) Scan from 9kHz to 25GHz, the disturbance above 13GHz and below 30MHz was very low, and the above harmonics were the highest point could be found when testing, so only the above harmonics had been displayed. The amplitude of spurious emissions from the radiator which are attenuated more than 20dB below the limit need not be reported.

3) As shown in this section, for frequencies above 1GHz, the field strength limits are based on average limits. However, the peak field strength of any emission shall not exceed the maximum permitted average limits specified above by more than 20 dB under any condition of modulation. So, only the peak measurements were shown in the report.

Report No.: SZEM161100983901 Page: 50 of 56

| Test Procedure:        | <ul> <li>a. For below 1GHz, the EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter semi-anechoic camber. The table was rotated 360 degrees to determine the position of the highest radiation.</li> <li>b. For above 1GHz, the EUT was placed on the top of a rotating table 1.5 meters above the ground at a 3 meter full-anechoic camber. The table was rotated 360 degrees to determine the position of the highest radiation.</li> <li>c. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.</li> <li>d. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.</li> <li>e. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.</li> <li>f. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.</li> <li>g. Place a marker at the end of the restricted band closest to the transmit frequency to show compliance. Also measure any emissions in the restricted bands. Save the spectrum analyzer plot. Repeat for each power and modulation for lowest and highest channel</li> <li>h. Test the EUT in the lowest channel , the Highest channel</li> <li>i. The radiation measurements are performed in X, Y, Z axis positioning which it is the worst case.</li> <li>j. Repeat above procedures until all frequencies measured was</li> </ul> |  |  |  |  |

Note:

The field strength is calculated by adding the Antenna Factor, Cable Factor & Preamplifier. The basic equation with a sample calculation is as follows:

Final Test Level =Receiver Reading + Antenna Factor + Cable Factor - Preamplifier Factor
