

# Access Point 360A

## Technical Reference Manual

### Software Version: v1.19

Version No.2.0 Issued October  
2015 English

**Devex Mining is committed to providing only the highest standards in technical documentation and training.**

Through a continual process of review and renewal, based on industry standards, client feedback and best practice, we ensure our products are supported by quality documentation and training.

From product offerings to customer support, Devex Mining is governed by the overarching principal that the customer comes first. We offer comprehensive documentation and training; ensuring client needs are met and exceeded.

**Devex Mining is a division of Hexagon Mining**

Devex Mining delivers leading solutions for fleet management and production optimization, machine maintenance, business intelligence and analytics.

Devex Mining is part of Hexagon Mining, the only global provider of surface and underground smart mining solutions that integrate design, planning, and operations technologies for safer, more productive mines. Learn more at [hexagonmining.com](http://hexagonmining.com).

# 1 Document Introduction

The AP360 (Access Point) Technical Reference Manual is part of the Devex Mining's reference manual suite.

This manual is for **internal use only** and is intended to serve as a commissioning and maintenance guide for the AP360 product when used within a Smartmine system.

The AP360 Technical Reference Manual is to be used as a supplement to the AP360 User Reference Manual. The AP360 User Reference Manual covers the process of how to set up the Smartmine network.

**WARNING:**

**Operators must be aware of the physical surroundings of their equipment and drive to conditions and mine requirements at all times.**

It is assumed an operator using this manual is familiar with:

- Site-specific safety procedures, Safe Work Procedures (SWPs) and Standard Operating Procedures (SOPs).

**Note:**

The document uses generic images to show general layout and generic information for various procedures. The site-specific screen layout, menu, and procedure information may vary from what is displayed in the manual.

## 1.1 Contacting Support

For all Devex Mining product support:

Contact Method	Details
Web portal	<a href="http://devexmining.com/smartmine/suporte-e-servicos/suporte-tecnico">http://devexmining.com/smartmine/suporte-e-servicos/suporte-tecnico</a> and select Suporte ao Cliente Devex

## 1.2 Document Conventions

This document uses basic conventions to indicate actions:

Convention Example	Description
See xxx Refer to	"See" indicates a reference to another section of this document. "Refer to" indicates reference to another document.
WARNING	Warnings alert the user to dangerous procedures which could cause injury or death.
CAUTION	Cautions alert the user to dangerous procedures which could cause damage to equipment.
Note	Notes supply important information about a procedure which is not covered in the procedure text.

## 2 Access Point 360 Overview

The Access Point 360 is a communication controller between static and remote device (Data head End - DHE and Trackers360) and the management system SmartMine|UG.

### 2.1 System Information

**Note:**

The document uses generic images to show general layout and generic information for various procedures. The site-specific screen layout, menu, and procedure information may vary from what is displayed in the manual.

Access Point 360 performs the following functions:

- Transmits dispatch orders and messages sent by operator's SmartMine|UG.
- Receives from operators an indication of the situation and current state of the equipment and its appropriation of hours, for example: Maintenance, Queues, etc.
- Receives data stored in the Trackers360, related to remote operations executed in event transfer windows provided by the SmartMine|UG.
- Receives and transmits to the SmartMine|UG system alarms generated by the operator regarding the speeding, improper operations, unjustified stops, etc.
- Receives and transmits to the SmartMine|UG tags's values which informs the equipment's location.

Access Point 360 software provides:

- Intuitive setup and use
- Command line configuration
- Upgrade through debug cable

See [Software Installation](#) for more information

### 2.2 Product Faceplate Description

The display is responsible for showing the expected settings and the keyboard is used to choose what is displayed. Section 5.2 will explain how to use them.

### 2.3 Labels

#### 2.3.1 Labels Location

Compliance labels are located on all Access Point 360 in the following locations:

##### FCC Certification Label and Serial Number Label Locations

   Made in Brazil Hexagon Mining - Devex - Belo Horizonte MG - Brazil  
Product: AP360A  
Power: 100-240VAC - 1.2A  
This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:  
(1) This Device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

 **HEXAGON MINING** |  **devex**

PN: AP360A      FCC ID: 2AFYJ-AP360A

LOT: 0001/MS      SN: 15410001

### 2.3.2 Access Point 360 FCC Certification Label

### 2.3.3 Access Point 360 Serial Number Label

## **3 AP Commissioning**

### **3.1 Commissioning Workflow**

1. See Chapter 4 Hardware Installation.
2. See Chapter 5 Software Installation.

## 4 Hardware Installation

### 4.1 Before Installation

Installation requires specialized knowledge and must be installed by a Hexagon Mining Authorized Installer. Hexagon Mining recommends that installation of the Access Point 360 equipment be performed by a qualified technician because installation requires marking electrical connections and software development.

- Install the system in a clean and workshop environment. Failure to do so may cause the system to short or promote product malfunction.
- Route and secure all cables and wiring to ensure that they not chafe or rub premature failure

### 4.2 Access Point Installation

The installation of AP360 inside the rack must be done using 4 screws to fix the device near to the DHE.

#### 4.2.1 Front View

#### 4.2.2 Rear View

- Rear structure made of steel
- Height of 1U for 19" rack storage

### 4.3 Data Head End – DHE

The AP360 must be fixed near to DHE, as shown in the figure below.

### 4.4 Power Cable Installation

#### Caution

The Access Point 360 is a 110 – 220 Volts AC system only.

1. Connect the supplied power cable to a reliable power source, for example, the rack's main power system.
2. Route and secure all cables and wiring to ensure that there is no rubbing, which can cause premature failure.
3. Connect the power cable to the power connector on the rear of the module.

#### 4.5 Communication Cable Installation

Connect the communication cable (Part number: DVXHW\_CBL0056R02 - Cabo AP360 – DHE) in the middle AP360's connector and other cable extremity in the DHE's connector, as shown in the figure below.

#### 4.6 Ethernet Cable Installation

Connect one side of the ethernet cable in the connector of the Access Point 360, show in the figure below. Connect the other connector side in the same network of the system SmartMine|UG.

## 4.7 Final Assembly

The figure X.XX shows the back view of AP360 installed in the rack with the DHEs. The figure shows the three cables installed.

## 5 Software Installation

The following procedure is used for software upgrades of AP360.

**Note:**

Contact Hexagon Mining | Devex for the required files.

### 5.1 Update Accesst Point 360 using debug cable

**WARNING:**

**Do not turn off the unit, or remove the debug cable while the software upgrade is under way.**

The software is installed using the debug cable. Installation files are provided by Hexagon support and are specific for each installation site.

**Procedure Requirements:**

- A Computer
- Debug Cable
- Clean USB Key – to 2 GB

1. Get the latest Linux release image available in the following link:  
[http://dev.devexmining.com/svn/produto\\_releases\\_dip/EmbeddedTemp/ImagensAccessPoint360/AP05\\_v119](http://dev.devexmining.com/svn/produto_releases_dip/EmbeddedTemp/ImagensAccessPoint360/AP05_v119)
2. Using the computer, extract the provided files and copy into the clean USB Key
3. The files in the USB Key appear as in the graphic below:

 buildrootfs-glibc.jffs2	17/06/2013 15:16	Arquivo JFFS2	1.792 KB
 buildrootfs-glibc.ubi	17/06/2013 15:16	Arquivo UBI	42.624 KB
 first_boot.img	17/06/2013 15:16	Arquivo de Imagem ...	1 KB
 kernel.img	17/06/2013 15:16	Arquivo de Imagem ...	1.913 KB
 leiame.txt	17/06/2013 16:56	Arquivo TXT	1 KB
 ramdisk.img	17/06/2013 15:16	Arquivo de Imagem ...	2.917 KB

4. To star the unit, connect the debug cable to the AP360 and USB Key:

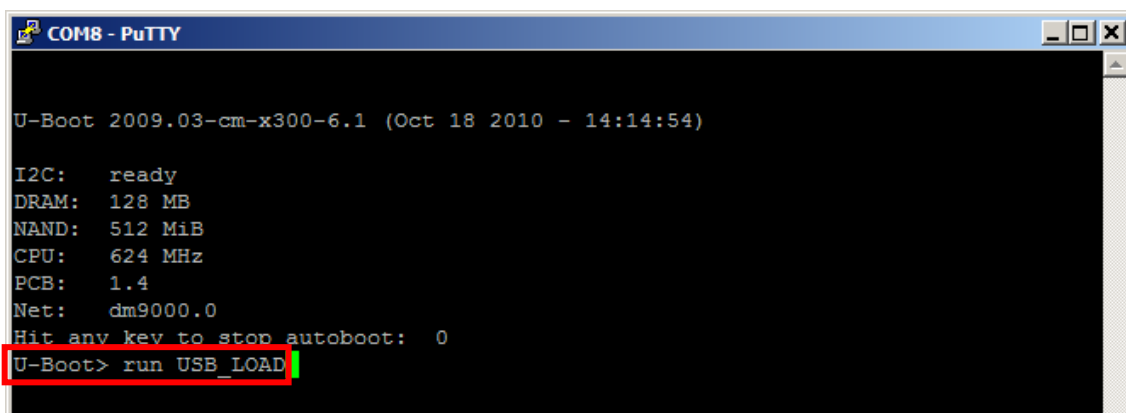

5. Access the AP360 via serial port, this procedure will use the software "Putty".
6. Open the software and select the "Serial" option under "Connection type". Then, enter the port emulated by USB converter in the field "Serial Line", which in this example is the COM3

port. In the "Speed" field set "38400", as shown in figure below. Finally click "Open" and connect the power supply cable to the AP360.

7. Configure the serial interface of your desktop or laptop and open the software "putty" and configure which are serial port and communication speed, as show in figure below:
8. During initialization a message will appear with a countdown of UBOOT: "Hit any key to stop autoboot". Before the counter reaches zero, press "SPACE" to enter the menu UBOOT, as show in figure below:
9. Run the command "run USB\_LOAD"

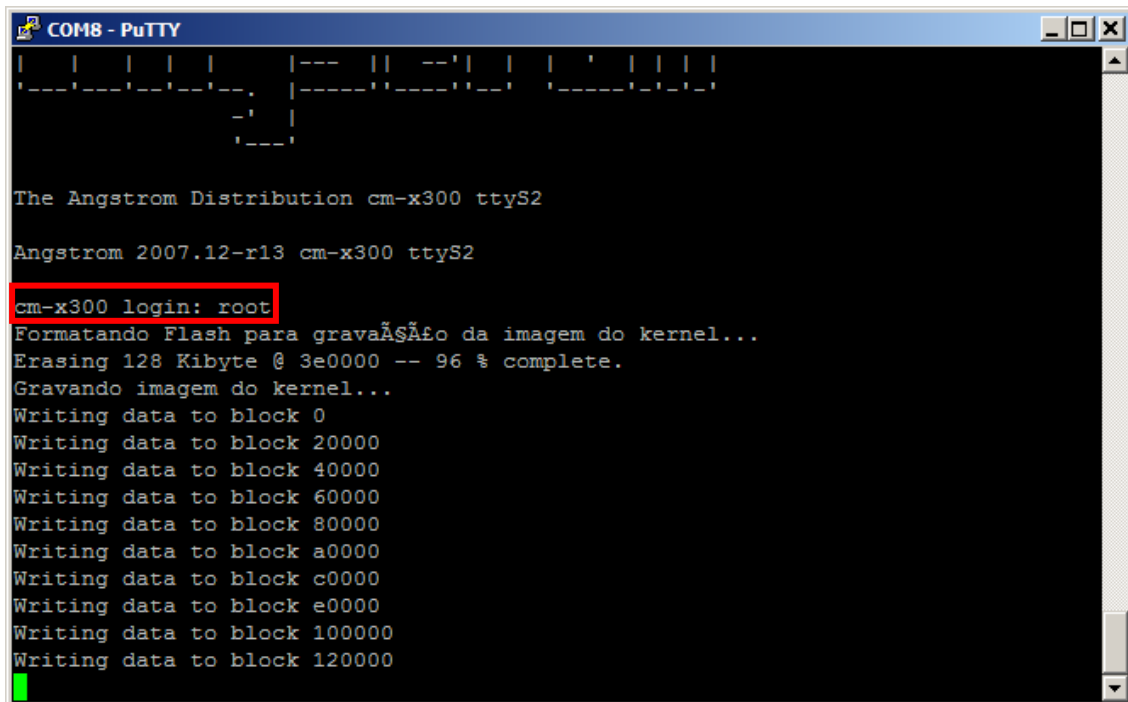

> **run USB\_LOAD**

After enter this command, several operation status messages will be displayed in the serial terminal connected to the AP360. When finished loading, a Login prompt will appears asking the user name to connect to the operational system.

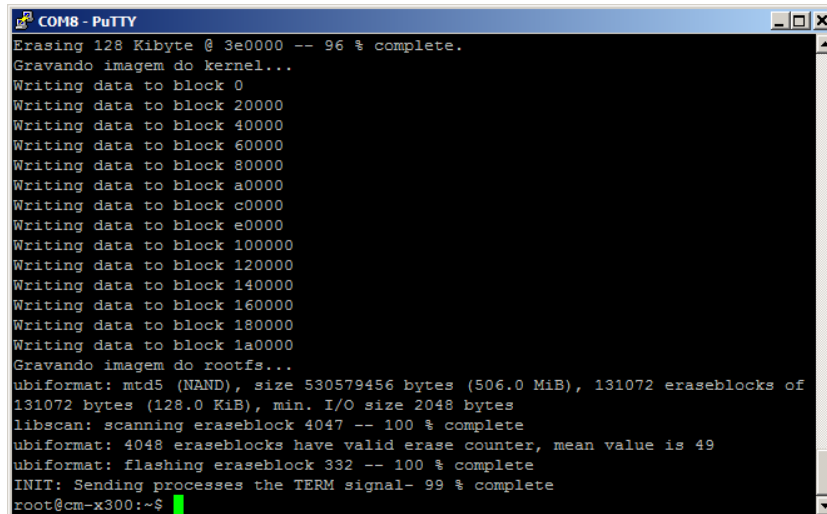

10. Run the command "root" , as show in figure below:

> root

```
COM8 - PuTTY
The Angstrom Distribution cm-x300 ttyS2
Angstrom 2007.12-r13 cm-x300 ttyS2
cm-x300 login: root
Formatando Flash para gravação da imagem do kernel...
Erasing 128 Kibyte @ 3e0000 -- 96 % complete.
Gravando imagem do kernel...
Writing data to block 0
Writing data to block 20000
Writing data to block 40000
Writing data to block 60000
Writing data to block 80000
Writing data to block a0000
Writing data to block c0000
Writing data to block e0000
Writing data to block 100000
Writing data to block 120000
```

11. Wait the process finalization and the AP360 will be restarted automatically, as show in figure below:

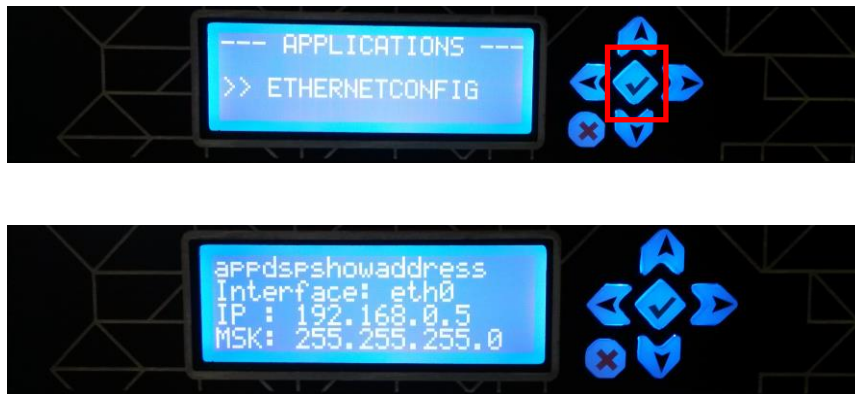

```

```

## 5.2 Installation and Configuration Verification

12. Connect the AP360's power cable into the power supply, 110 or 220VAC (50/60 Hz) and Ethernet cable. Wait this boot, as shown figure below.

13. Press the center button, highlighted in Figure below. This procedure displays the AP360 menu. Press the center button. Note that the device's network settings are displayed.

## 6 Technical Data

### 6.1 Design

Industrial metal housing

#### 6.1.1 User interface

- Display 20x4 Characters
- Console RS232 serial

#### 6.1.2 Dimensions

Length (cm)	Width (cm)	Height (cm)
23,85	48,26	4,44

#### 6.1.3 Weight

Weight (Kg)
3,300

#### 6.1.4 Power

Consumption	External Supply Voltage
	Voltage Range 110 to 220 VCA

## 6.2 Environmental Specifications

### 6.2.1 Temperature

Operating Temperature (°C)	Storage Temperature (°C)
0 to +45	-10 to +50

### 6.2.2 Protection Against Water, Dust and Sand

Protection
IP 65 Specified with fitted HRS connector

### 6.2.3 Humidity

Protection
10% to 90%

## 6.3 Communication Interfaces

Communication Interface name	Quantity
RS232 Serial	4x
RS485 Serial	1x

Ethernet	1x
K-Line	1x
J1708	1x
USB	1x
Display	1x
Digital Outputs	2x

#### **6.4 FCC Statement (Applicable for U.S.)**

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

## 7 Glossary

Term	Definition
AP	Access Point
DHE	Data head End
FCC	Federal Communications Commission
HRS	Hirose
IP	Protection Index
USB	Universal Serial Bus
VCA	voltage current alternate
SOPs	Standard Operating Procedures
SWPs	Safe Work Procedures

# HEXAGON MINING

Hexagon Mining is the only company to solve surface and underground challenges by integrating design, planning, and operations technologies for safer, more productive mines. Headquartered in Tucson, Arizona, with more than 30 offices across five continents, the company is a dynamic network of talented mining professionals delivering technology, service, and support.

Hexagon Mining unites industry leaders MineSight, Devex Mining, Leica Geosystems Mining, and SAFEmine. Together they seamlessly link mine planning, design, fleet and production management, optimization, and collision avoidance software for a comprehensive flow of data across all operations. Learn more at [hexagonmining.com](http://hexagonmining.com).

Hexagon Mining is part of Hexagon (Nasdaq Stockholm: HEXA B; [www.hexagon.com](http://www.hexagon.com)), a leading global provider of information technologies that drive quality and productivity improvements across geospatial and industrial enterprise applications.
