### **1.2 EUT INFORMATION**

#### 1.2.1 General Description of EUT

| Product Name:          | Mobile Phone                      |                              |              |
|------------------------|-----------------------------------|------------------------------|--------------|
| Model No.:             | MCG3B                             |                              |              |
| Add. Model No.:        | N/A                               |                              |              |
| Trade Mark:            | MI                                |                              |              |
| DUT Stage:             | Identical Prototype               |                              |              |
|                        | GSM Bands:                        | GSM850/1900                  |              |
|                        | UTRA Bands:                       | Band II/ Band V              |              |
|                        | E-UTRA Bands:                     | FDD Band 4/ Band 5/ Band 7   |              |
| EUT Supports Function: |                                   | TDD Band 38                  |              |
| EOT Supports Function. | 2.4 GHz ISM Band:                 | IEEE 802.11b/g/n             |              |
|                        |                                   | Bluetooth: V3.0+HS & V4.1 LE |              |
|                        | RNSS Bands:                       | 1559 MHz to 1610 MHz         | GPS/ GLONASS |
|                        | BSR:                              | VHF Band II                  | FM           |
| Software Version:      | MIUI8                             |                              |              |
| Hardware Version:      | P2.0                              |                              |              |
| IMEI Code:             | 865183030026007, 865183030026015  |                              |              |
| Sample Received Date:  | August 4, 2017                    |                              |              |
| Sample Tested Date:    | August 5, 2017 to August 15, 2017 |                              |              |

### 1.2.2 Description of Accessories

| Adapter(1)    |   |  |
|---------------|---|--|
| Trade Mark:   | XIAOMI                                    |  |
| Model No.:    | MDY-09-EE                                 |  |
| Input:        | 100-240 V~50/60 Hz 0.2A Max               |  |
| Output:       | 5.0 V == 1.0 A                            |  |
| AC Cable:     | N/A                                       |  |
| DC Cable:     | 0.8 Meter, Shielded without ferrite       |  |
| Manufacturer: | Dongguan Aohai Power Technology Co., Ltd. |  |

| Adapter(2)    |   |  |
|---------------|---|--|
| Trade Mark:   | XIAOMI                                    |  |
| Model No.:    | MDY-09-EE                                 |  |
| Input:        | 100-240 V~50/60 Hz 0.2A Max               |  |
| Output:       | 5.0 V === 1.0 A                           |  |
| AC Cable:     | N/A                                       |  |
| DC Cable:     | 0.8 Meter, Shielded without ferrite       |  |
| Manufacturer: | Dongguan Aohai Power Technology Co., Ltd. |  |

| Battery(1)              |                                   |  |
|-------------------------|-----------------------------------|--|
| Trade Mark:             | MI                                |  |
| Model No.:              | BN34                              |  |
| Battery Type:           | Lithium-ion Rechargeable Battery  |  |
| Rated Voltage:          | 3.85 Vdc                          |  |
| Limited Charge Voltage: | 4.4 Vdc                           |  |
| Rated Capacity:         | 2910mAh                           |  |
| Manufacturer:           | SCUD(Fujian)Electronics Co., Ltd. |  |

| Battery(2)              |                                  |  |
|-------------------------|----------------------------------|--|
| Trade Mark:             | MI                               |  |
| Model No.:              | BN34                             |  |
| Battery Type:           | Lithium-ion Rechargeable Battery |  |
| Rated Voltage:          | 3.85 Vdc                         |  |
| Limited Charge Voltage: | 4.4 Vdc                          |  |
| Rated Capacity:         | 2910mAh                          |  |
| Manufacturer:           | Sunwoda Electronic Co., Ltd.     |  |

| Cable(1)     |                          |
|--------------|--------------------------|
| Trade Mark:  | N/A                      |
| Model No.:   | KLC-2639                 |
| Description: | USB Micro-B Plug Cable   |
| Cable Type:  | Shielded without ferrite |
| Length:      | 0.8 Meter                |

| Cable(2)     |                          |
|--------------|--------------------------|
| Trade Mark:  | N/A                      |
| Model No.:   | 0US231XI0015             |
| Description: | USB Micro-B Plug Cable   |
| Cable Type:  | Shielded without ferrite |
| Length:      | 0.8 Meter                |

### **1.3 PRODUCT SPECIFICATION SUBJECTIVE TO THIS STANDARD**

| Operational Frequency<br>Band | 2400 MHz to 2483.5 MHz |
|-------------------------------|------------------------|
| Frequency Range:              | 2402 MHz to 2480 MHz   |
| Bluetooth Version:            | Bluetooth V4.0 LE      |
| Type of Modulation:           | GFSK                   |
| Number of Channels:           | 40                     |
| Channel Separation:           | 2 MHz                  |
| Antenna Type:                 | PIFA Antenna           |
| Antenna Gain:                 | -0.9 dBi               |
| Maximum Peak Power:           | 1.72 dBm               |
| Normal Test Voltage:          | 3.85 Vdc               |

### **1.4 OTHER INFORMATION**

|         | Operation Frequency Each of Channel |         |           |         |           |         |           |  |  |
|---------|-------------------------------------|---------|-----------|---------|-----------|---------|-----------|--|--|
| Channel | Frequency                           | Channel | Frequency | Channel | Frequency | Channel | Frequency |  |  |

| 9       | 2420 MHz                            | 19      | 2440 MHz  | 29      | 2460 MHz  | 39      | 2480 MHz  |  |  |

### **1.5 DESCRIPTION OF SUPPORT UNITS**

The EUT has been tested with associated equipment below.

1) Support Equipment

| Description | Manufacturer | Model No. | Serial Number             | Supplied by |
|-------------|--------------|-----------|---------------------------|-------------|
| Notebook    | Lenovo       | E450      | SL10 <mark>G1</mark> 0780 | UnionTrust  |

#### 2) Support Cable

| Cable No. | Description   | Connector | Length     | Supplied by |
|-----------|---------------|-----------|------------|-------------|
| 1         | Antenna Cable | SMA       | 0.30 Meter | UnionTrust  |

### 1.6 TEST LOCATION

#### Shenzhen UnionTrust Quality and Technology Co., Ltd.

Address: 16/F, Block A, Building 6, Baoneng Science and Technology Park, Qingxiang Road No.1, Longhua New District, Shenzhen, China 518109 Telephone: +86 (0) 755 2823 0888 Fax: +86 (0) 755 2823 0886

### 1.7 TEST FACILITY

The test facility is recognized, certified, or accredited by the following organizations:

#### CNAS-Lab Code: L9069

The measuring equipment utilized to perform the tests documented in this report has been calibrated once a year or in accordance with the manufacturer's recommendations, and is traceable under the ISO/IEC/EN 17025 to international or national standards. Equipment has been calibrated by accredited calibration laboratories.

#### IC-Registration No.: 21600-1

The 3m Semi-anechoic chamber of Shenzhen UnionTrust Quality and Technology Co., Ltd. has been registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing with Registration No.: 21600-1.

#### A2LA-Lab Certificate No.: 4312.01

Shenzhen UnionTrust Quality and Technology Co., Ltd. has been accredited by A2LA for technical competence in the field of electrical testing, and proved to be in compliance with ISO/IEC 17025: 2005 General Requirements for the Competence of Testing and Calibration Laboratories and any additional program requirements in the identified field of testing.

#### FCC Accredited Lab.

Designation Number: CN1194 Test Firm Registration Number: 259480

### **1.11 MEASUREMENT UNCERTAINTY**

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the Product as specified in CISPR 16-4-2. This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

| No. | Item                            | Measurement Uncertainty |
|-----|---------------------------------|-------------------------|
| 1   | Conducted emission 9KHz-150KHz  | ±3.8 dB                 |
| 2   | Conducted emission 150KHz-30MHz | ±3.4 dB                 |
| 3   | Radiated emission 9KHz-30MHz    | ±4.9 dB                 |
| 4   | Radiated emission 30MHz-1GHz    | ±4.7 dB                 |
| 5   | Radiated emission 1GHz-18GHz    | ±5.1 dB                 |
| 6   | Radiated emission 18GHz-26GHz   | ±5.2 dB                 |
| 7   | Radiated emission 26GHz-40GHz   | ±5.2 dB                 |

### **4.3 EUT TEST STATUS**

| Type of Modulation | Tx/Rx Function | Description   |  |  |
|--------------------|----------------|---|--|--|
| GFSK               | 1Tx/1Rx        | <ol> <li>Keep the EUT in continuously transmitting or receiving with<br/>modulation test single.</li> </ol> |  |  |

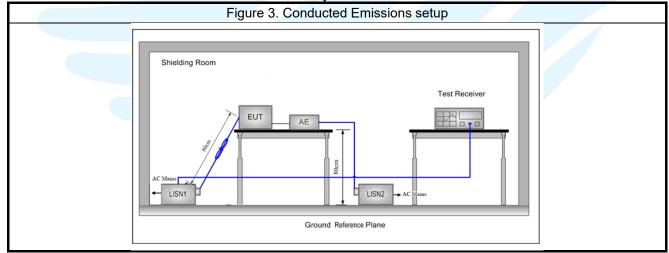

### **4.4 TEST SETUP**

4.4.1 For Radiated Emissions test setup

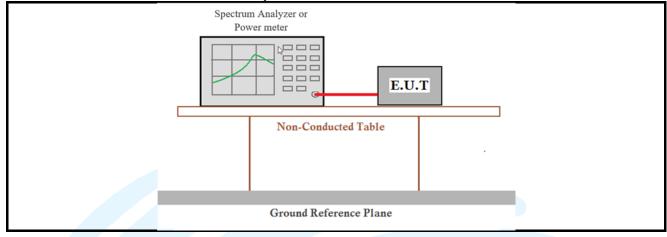

#### 4.4.2 For Conducted Emissions test setup

#### 4.4.3 For Conducted RF test setup

### **4.5 SYSTEM TEST CONFIGURATION**

For emissions testing, the equipment under test (EUT) setup to transmit continuously to simplify the measurement methodology. Care was taken to ensure proper power supply voltages during testing. During testing, radiated emission were performed with the EUT set to transmit at the channel with highest output power as worst-case scenario. It was powered by a 3.85Vdc rechargeable Li-on battery. Only the worst case data were recorded in this test report.

The signal is maximized through rotation and placement in the three orthogonal axes. The antenna height and polarization are varied during the search for maximum signal level. The antenna height is varied from 1 to 4 meters. Radiated emissions are taken at three meters unless the signal level is too low for measurement at that distance. If necessary, a pre-amplifier is used and/or the test is conducted at a closer distance. Therefore, all final radiated testing was performed with the EUT in (see table below) orientation.

| Frequency  | Mode | Antenna Port | Worst-case axis<br>positioning |  |
|------------|------|--------------|--------------------------------|--|
| Above 1GHz | 1TX  | Chain 0      | Y axis                         |  |

All readings are extrapolated back to the equivalent three meter reading using inverse scaling with distance. Analyzer resolution is 100 kHz or greater for frequencies below 1000 MHz. The resolution is 1 MHz or greater for frequencies above 1000 MHz. The spurious emissions more than 20 dB below the permissible value are not reported.

Radiated emission measurement were performed from the lowest radio frequency signal generated in the device which is greater than 9 kHz to the tenth harmonic of the highest fundamental frequency or to 40 GHz, whichever is lower.

### 4.6 DUTY CYCLE

| Type of Modulation | On Time<br>(msec) | Period<br>(msec) | Duty Cycle<br>(linear) | Duty Cycle<br>(%) | Duty Cycle<br>Factor (dB) | 1/ T<br>Minimum<br>VBW (kHz) | Average<br>Factor (dB) |
|--------------------|-------------------|------------------|------------------------|-------------------|---------------------------|------------------------------|------------------------|
| GFSK               | 0.39              | 0.624            | 0.63                   | 62.50             | 2.04                      | 2.56                         | -4.08                  |

#### Remark:

1) Duty cycle= On Time/ Period;

2) Duty Cycle factor = 10 \* log(1/ Duty cycle);

3) Average factor = 20 log<sub>10</sub> Duty Cycle.

### **5.2 ANTENNA REQUIREMENT**

#### **Standard Requirement**

#### 15.203 requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

#### 15.247(b) (4) requirement:

The conducted output power limit specified in paragraph (b) of this section is based on the use of antennas with directional gains that do not exceed 6 dBi. Except as shown in paragraph (c) of this section, if transmitting antennas of directional gain greater than 6 dBi are used, the conducted output power from the intentional radiator shall be reduced below the stated values in paragraphs (b)(1), (b)(2), and (b)(3) of this section, as appropriate, by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

#### EUT Antenna:

Antenna in the interior of the equipment and no consideration of replacement. The gain of the antenna is -0.9 dBi.

#### Remark:

- 1. The lower limit shall apply at the transition frequencies.
- 2. Emission level (dBuV/m) = 20 log Emission level (uV/m).
- 3. For frequencies above 1000 MHz, the field strength limits are based on average detector, however, the peak field strength of any emission shall not exceed the maximum permitted average limits, specified above by more than 20 dB under any condition of modulation.

**Test Setup:** Refer to section 4.4.1 for details.

#### **Test Procedures:**

- 1. From 30 MHz to 1GHz test procedure as below:
- 1) The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter semi-anechoic camber. The table was rotated 360 degrees to determine the position of the highest radiation.
- 2) The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- 3) The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- 4) For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters (for the test frequency of below 30MHz, the antenna was tuned to heights 1 meter) and the rota table table was turned from 0 degrees to 360 degrees to find the maximum reading.
- 5) The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.
- 6) If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet.
- 2. Above 1GHz test procedure as below:
- 1) Different between above is the test site, change from Semi- Anechoic Chamber to fully Anechoic Chamber and change form table 0.8 meter to 1.5 meter( Above 18GHz the distance is 1 meter and table is 1.5 meter).
- 2) Test the EUT in the lowest channel ,middle channel, the Highest channel
- 3) The radiation measurements are performed in X, Y, Z axis positioning for Transmitting mode, and found

Page 27 of 41

the Y axis positioning which it is worse case.

4) Repeat above procedures until all frequencies measured was complete.

**Equipment Used:** Refer to section 3 for details. Pass

**Test Result:** 

The measurement data as follows:

#### Radiated Emission Test Data (9 KHz ~ 30 MHz):

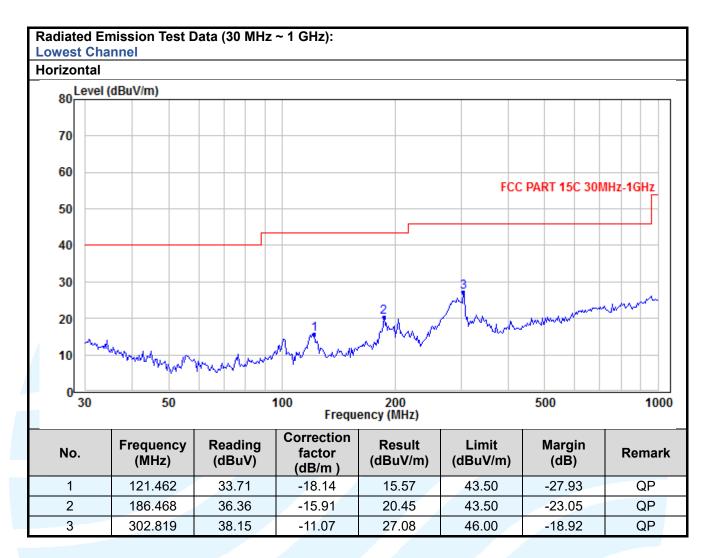

The amplitude of spurious emissions attenuated more than 20 dB below the permissible value is not required to be report.

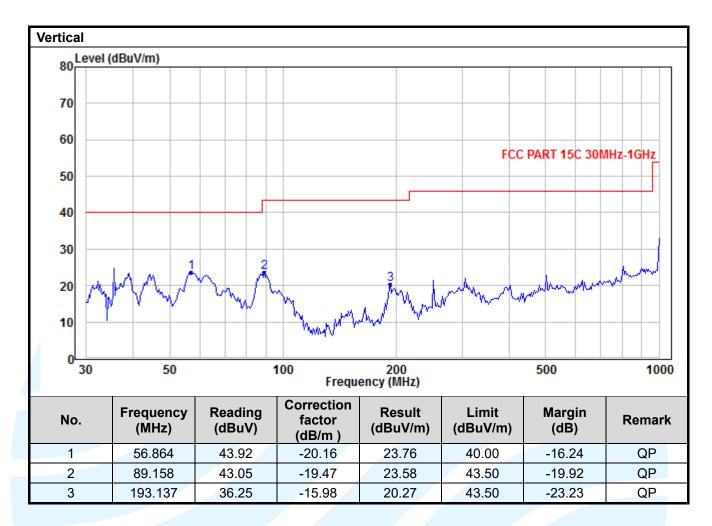

#### Radiated Emission Test Data (Above 12.75 GHz):

The amplitude of spurious emissions attenuated more than 20 dB below the permissible value is not required to be report.

### 5.8 BAND EDGE MEASUREMENTS (RADIATED)

Test Requirement: FCC 47 CFR Part 15 Subpart C Section 15.205/15.209

**Test Method:** 

KDB 558074 D01 v04, Section 12.1

#### Limits:

Radiated emissions which fall in the restricted bands, as defined in section 15.205(a), must also comply with the radiated emission limits specified in section 15.209(a).

| Frequency       | Limit (dBµV/m @3m) | Remark           |
|-----------------|--------------------|------------------|
| 30 MHz-88 MHz   | 40.0               | Quasi-peak Value |
| 88 MHz-216 MHz  | 43.5               | Quasi-peak Value |
| 216 MHz-960 MHz | 46.0               | Quasi-peak Value |
| 960 MHz-1 GHz   | 54.0               | Quasi-peak Value |
| Above 1 GHz     | 54.0               | Average Value    |
| Above I GHZ     | 74.0               | Peak Value       |

**Test Setup:** Refer to section 4.4.1 for details.

#### **Test Procedures:**

Radiated band edge measurements at 2390 MHz and 2483.5 MHz were made with the unit transmitting in the low end of the channel range and the high end closest to the restricted bands respectively. The emissions were made on the 966 Semi-Chamber. Use (resolution bandwidth (RBW) = 1 MHz, video bandwidth (VBW) = 3 MHz for peak levels and RBW = 1 MHz and VBW = 10 Hz or 1/T for average levels).

1. Use radiated spurious emission test procedure described in clause 5.10. The transmitter output (antenna port) was connected to the test receiver.

2. Set the PK and AV limit line.

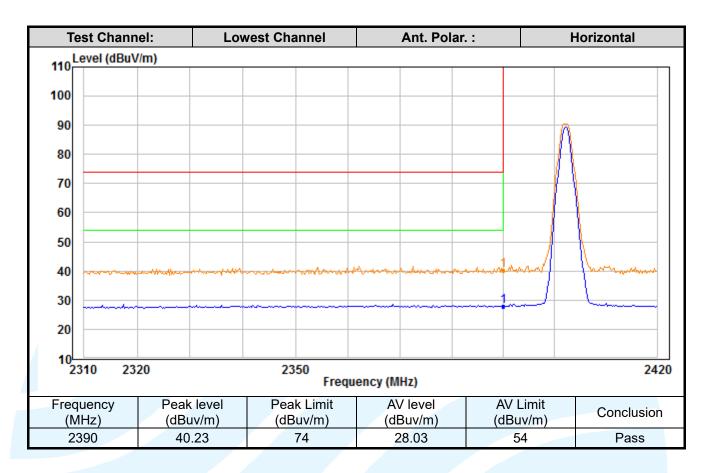

3. Record the fundamental emission and emissions out of the band-edge.

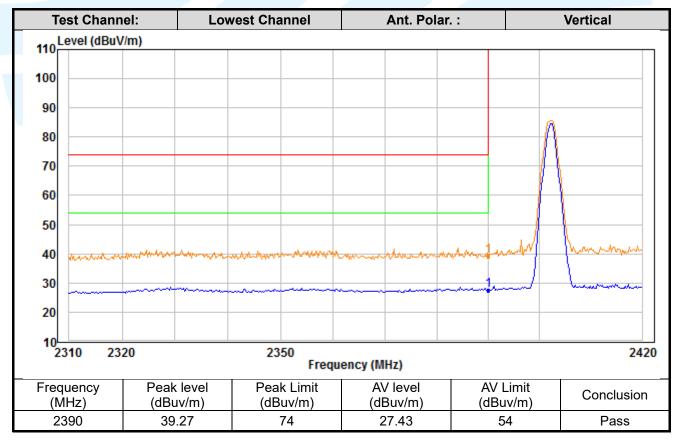

4. Determine band-edge compliance as required.

Refer to section 3 for details. Equipment Used: Pass

**Test Result:** 

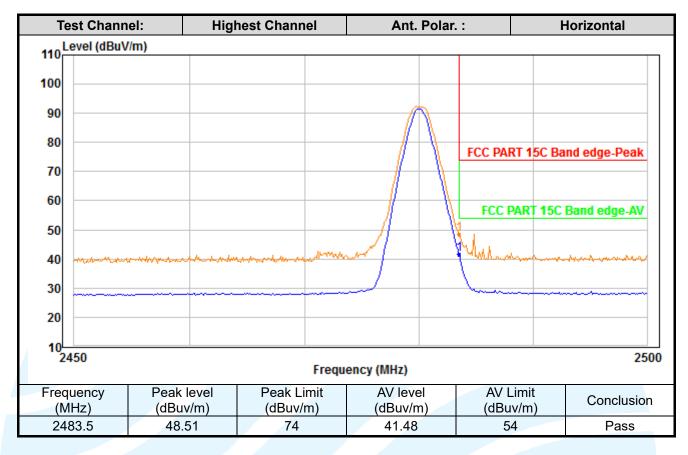

The measurement data as follows:

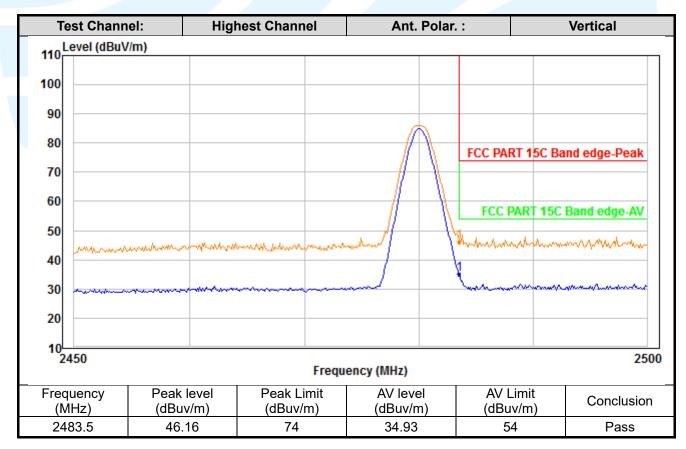

### Page 37 of 41

Report No.: 170803008RFC-2

### 5.9 CONDUCTED EMISSION

| Test Requirement: | 47 CFR Part 15C Section 15.207 |
|-------------------|--------------------------------|
| Test Method:      | ANSI C63.10-2013 Section 6.2   |
| Limits:           |                                |

| Frequency range | Limits (dB(µV) |          |  |  |
|-----------------|----------------|----------|--|--|
| (MHz)           | Quasi-peak     | Average  |  |  |
| 0,15 to 0,50    | 66 to 56       | 56 to 46 |  |  |
| 0,50 to 5       | 56             | 46       |  |  |
| 5 to 30         | 60             | 50       |  |  |

#### Remark:

- The lower limit shall apply at the transition frequencies. 1.
- The limit decreases linearly with the logarithm of the frequency in the range 0.15 to 0.50 MHz. 2.
- Refer to section 4.4.2 for details. **Test Setup:**

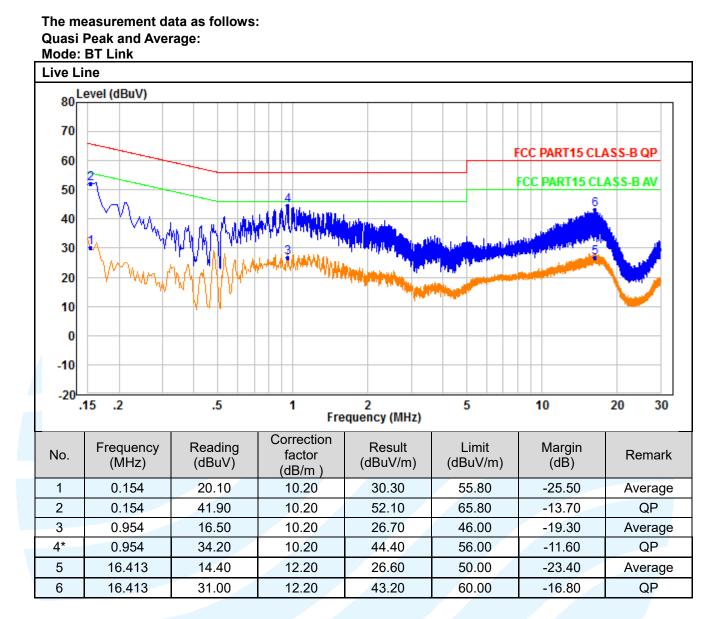

#### **Test Procedures:**

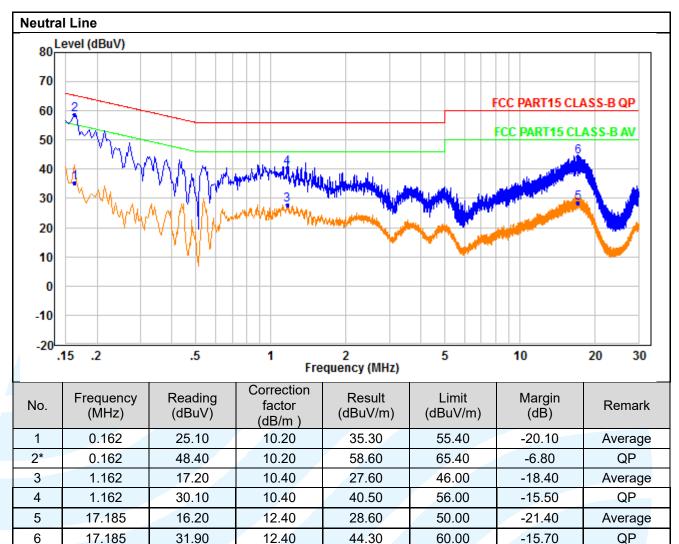

Test frequency range :150KHz-30MHz

- The mains terminal disturbance voltage test was conducted in a shielded room. 1)
- The EUT was connected to AC power source through a LISN 1 (Line Impedance Stabilization Network) 2) which provides a  $50\Omega/50\mu$ H +  $5\Omega$  linear impedance. The power cables of all other units of the EUT were connected to a second LISN 2, which was bonded to the ground reference plane in the same way as the LISN 1 for the unit being measured. A multiple socket outlet strip was used to connect multiple power cables to a single LISN provided the rating of the LISN was not exceeded.
- The tabletop EUT was placed upon a non-metallic table 0.8m above the ground reference plane. And for 3) floor-standing arrangement, the EUT was placed on the horizontal ground reference plane,
- The test was performed with a vertical ground reference plane. The rear of the EUT shall be 0.4 m from 4) the vertical ground reference plane. The vertical ground reference plane was bonded to the horizontal ground reference plane. The LISN 1 was placed 0.8 m from the boundary of the unit under test and bonded to a ground reference plane for LISNs mounted on top of the ground reference plane. This distance was between the closest points of the LISN 1 and the EUT. All other units of the EUT and associated equipment was at least 0.8 m from the LISN 2.
- In order to find the maximum emission, the relative positions of equipment and all of the interface cables 5) must be changed according to ANSI C63.10 on conducted measurement.

Equipment Used: Refer to section 3 for details. Pass

Test Result:

#### Remark:

6

17.185

31.90

1. An initial pre-scan was performed on the Phase and neutral lines with peak detector. Quasi-Peak and Average measurement were performed at the frequencies with maximized peak emission were detected.
