### 2.1 Test Laboratory

Name: SGS North America, Inc.  
Address: 620 Old Peachtree Road NW, Suite 100  
City, State, Zip, Country: Suwanee, GA 30024, USA

Accrediting Body: A2LA  
Type of lab: Testing Laboratory  
Certificate Number: 3212.01

### 2.2 General Information of EUT

Type of Product: Upper C Band Radio  
Model Number: RF-5100  
Serial Number: B-3416-4536

Frequency Range: 5150 to 5250 MHz and 5725 to 5850 MHz  
Data Modes: 802.11a, 802.11n (HT20)  
Antenna: External/Detachable, 3x3 MIMO, 3.5dBi Gain

Rated Voltage: 10.8Vdc 73Wh  
Test Voltage: 10.8Vdc 73Wh

Sample Received Date: 20 February 2018  
Date of testing: 4-6 April and 20 April 2018

### 3 RF Exposure

#### 3.1 Introduction

This generic standard applies to low power electronic and electrical apparatus for which no dedicated product – or product family standard regarding human exposure to electromagnetic fields applies. The frequency range covered is 10 MHz to 300 GHz.

The object of this standard is to demonstrate the compliance of such apparatus with the basic restrictions on exposure of the general public to electric, magnetic and electromagnetic fields and contact current.

All electromagnetic fields

If the average power emitted by the apparatus operating in the frequency range 10 MHz to 300 GHz is less than or equal to 20 mW the apparatus is deemed to comply with the basic restrictions without testing.

Averaging time is 6 minutes in the frequency range 10 MHz to 10 GHz. The average time is equal to  $68/f^{1.05}$  minutes (where f is in GHz) in the frequency range 10 GHz to 300 GHz.

If the total supply power or the input power to the circuitry producing the greatest emissions in the device is less than or equal to 20 mW then it is assumed that the emitted power is less than 20 mW.

Pulse modulated electromagnetic fields with pulse duration less than 30 micro seconds. For pulse of duration less than 30 microseconds at frequencies between 300 MHz and 10 GHz, there is also a basic restriction on SA. This is  $2\text{mJ kg}^{-1}$  in any 10g of tissue in the head. For most pulses, the SAR restriction will be more stringent, but for pulses with a repetition frequency of less than 100 Hz, the SA restriction will predominate. For devices producing pulses with repetition rates below 100 Hz, the average power should be less than  $20 \times \text{prf mW}$  (prf in Hz).

Calculations are made using the following equation:

$$P_d = \frac{P_t G_t}{4\pi r^2}$$

Where

$P_d$  = Power Density ( $\text{W/m}^2$ )

$P_t$  = Power Transmitted (W)

$G_t$  = Gain of Transmitting antenna

r = Distance from Antenna (meters)

#### RSS-102:issue 5, 2.5.2 Exemption Limits for Routine Evaluation — RF Exposure Evaluation

RF exposure evaluation is required if the separation distance between the user and/or bystander and the device's radiating element is greater than 20 cm, except when the device operates as follows:

- Below 20 MHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than 1 W (adjusted for tune-up tolerance);
- at or above 20 MHz and below 48 MHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than  $22.48/f^{0.5}$  W (adjusted for tune-up tolerance), where  $f$  is in MHz;
- at or above 48 MHz and below 300 MHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than 0.6 W (adjusted for tune-up tolerance);
- ✓ at or above 300 MHz and below 6 GHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than  $1.31 \times 10^{-2} \times f^{0.6834}$  W (adjusted for tune-up tolerance), where  $f$  is in MHz;
- at or above 6 GHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than 5 W (adjusted for tune-up tolerance).

In these cases, the information contained in the RF exposure technical brief may be limited to information that demonstrates how the e.i.r.p. was derived.

### 3.3 Exposure calculations

As per RF report, the maximum power of the EUT is indicated below:

DUT Frequency	Peak Power, dBm	Peak Power, mW	Note
5150-5250 MHz	17.4		Conducted power, not including antenna gain
5725-5850 MHz	30	1000	Conducted power, not including antenna gain
