Measurement/Technical Report for
Pointer Telocation

Asset Tracking Device

LV500,
CelloTrack Solar LTE C1 NA

FCC ID: 2AG69CTSO
IC: 9975A-CTSO

This report concerns:	Original Grant: Class I Change: Class II Change: X
Equipment type:	FCC: (DTS) Digital Transmission System IC: Spread Spectrum Digital Device (2400-2483.5 MHz)
Limits used:	47CFR15 Section 15.247 RSS 247, Issue 2, February 2017, Section 5 RSS-Gen, Issue 5, April 2018

Measurement procedure used is KDB 558074 D01 v05r03 and ANSI C63.10:2013 and RSS Gen, Issue 5

Application for Certification

TABLE OF CONTENTS

1. General Information

1.1 *Administrative Information*

Manufacturer:	Pointer Telocation
Manufacturer's Address:	14 Hamelacha, PO Box 11473 Rosh Haain, Israel Tel: +972 73 2622320
Manufacturer's Representative:	Igor Rogov
Equipment Under Test (E.U.T):	Asset Tracking Device
Equipment PMN:	LV500 (*See customer declaration starting on page 10)
Equipment Part No.:	Not designated
Equipment HVIN:	6001
Date of Receipt of E.U.T:	July 16, 2020
Start of Test:	July 16, 2020
End of Test:	July 19, 2020
Test Laboratory Location:	I.T.L (Product Testing) Ltd. 1 Batsheva St., Lod ISRAEL 7120101
Test Specifications:	FCC Part 15, Subpart C RSS 247, Issue 2, February 2017, Section 5 RSS-Gen, Issue 5 + A1, March 2019

1.2 *List of Accreditations*

The EMC laboratory of I.T.L. is accredited by the following bodies:

1. The American Association for Laboratory Accreditation (A2LA) (U.S.A.), Certificate No. 1152.01.
2. The Federal Communications Commission (FCC) (U.S.A.), FCC Designation No. IL1005.
3. The Israel Ministry of the Environment (Israel), Registration No. 1104/01.
4. Department of Innovation, Science and Economic Development (ISED) Canada, CAB identifier: IL1002.

I.T.L. Product Testing Ltd. is accredited by the American Association for Laboratory Accreditation (A2LA) and the results shown in this test report have been determined in accordance with I.T.L.'s terms of accreditation unless stated otherwise in the report.

1.3 *Product Description*

The CelloTrack Solar is a standalone dual-powered 'deploy and forget' unit for asset tracking and freight visibility, requiring no external power connection. Solar-powered, the CelloTrack Solar comes with long-lasting primary batteries that ensure extended years of maintenance-free reliable performance; in addition, its wireless sensor connectivity provides measurements of the various environmental conditions (temperature, humidity, shock, etc.) of your cargo.
The CelloTrack Solar, with its highly rugged durable enclosure sized to perfectly fit the grooves and ceilings of containers, is an ideal solution for containers, trailers or assets in remote locations and harsh conditions, where no other recharging facilities exist.

Working voltage(nominal)	3.6VDC
Mode of operation	Transceiver
Modulations	GFSK
Assigned Frequency Range	2400.0-2483.5MHz
Operating Frequency Range	2402.0-2480.0MHz
Transmit power(conducted)	~4.0dBm
Antenna Gain	+2.0dBi
Modulation BW	2MHz
Bit rate (Mbit/s)	1, 2, 3

1.4 Test Methodology

Both conducted and radiated testing was performed according to the procedures in KDB 558074 D01 v05r03 and ANSI C63.10: 2013, RSS Gen, Issue 5.
Radiated testing was performed at an antenna to EUT distance of 3 meters.

1.5 *Test Facility*

Emissions tests were performed at I.T.L.'s testing facility in Lod, Israel. I.T.L.'s EMC Laboratory is accredited by A2LA, certificate No. 1152.01 and its FCC Designation Number is IL1005.

1.6 *Measurement Uncertainty*

Conducted Emission
Conducted Emission (CISPR 11, EN 55011, CISPR 22, EN 55022, ANSI C63.4)

0.15 – 30 MHz:
Expanded Uncertainty (95% Confidence, K=2):
± 3.44 dB

Radiated Emission

Radiated Emission (CISPR 11, EN 55011, CISPR 22, EN 55022, ANSI C63.4) for open site:

30-1000MHz:
Expanded Uncertainty (95% Confidence, K=2):
± 4.96 dB

1 GHz to 6 GHz
Expanded Uncertainty (95% Confidence, K=2):
±5.19 dB

>6 GHz
Expanded Uncertainty (95% Confidence, K=2):
±5.51 dB

2. System Test Configuration

2.1 *Justification*

1. The E.U.T. was originally FCC certified on 11/11/2019 under FCC ID: 2AG69CTSO and IC certified on 11/12/2019 under IC: 9975A-CTSO.
2. Currently, changes were made to the original E.U.T. which will now be known by two names, the LV500 and CelloTrack Solar LTE C1 NA. See customer's declaration of changes starting on page 10.
3. A C2PC is requested based on those changes. The following tests were performed: maximum conducted output power, occupied bandwidth and spurious radiated emissions.
4. The E.U.T. met the requirements of a C2PC.
5. The E.U.T contains an IEEE 802.15.1 transceiver.
6. The unit was evaluated while transmitting at the low channel (2402MHz), the mid channel (2440MHz) and the high channel (2480MHz).
7. Conducted emission method was performed with the EUT connected to a spectrum analyzer via 30dB attenuator.
8. Final radiated emission test for spurious emission for the new model was performed after exploratory emission testing that was performed in 3 orthogonal polarities to determine the "worst case" radiation.
9. According to the following results, the worst case axis was the Y axis for all channels.

Orientation	Frequency (MHz)	2nd Harmonic (dBuV/m)	3rd Harmonic (dBuV/m)
X axis	2402.0	45.9(N.L)	46.7(N.L)
	2440.0	44.0(N.L)	45.9(N.L)
	2480.0	45.1(N.L)	46.2(N.L)
Y axis	2402.0	46.0(N.L)	46.7(N.L)
	2440.0	44.4(N.L)	46.0(N.L)
	2480.0	45.8(N.L)	47.0(N.L)
Z axis	2402.0	44.1(N.L)	44.8(N.L)
	2440.0	44.0(N.L)	45.7(N.L)
	2480.0	43.9(N.L)	46.1(N.L)

Figure 1. Screening Results

2.2 *EUT Exercise Software*

No special exercise software was used.

2.3 *Special Accessories*

No special accessories was used.

2.4 *Equipment Modifications*

No modifications were necessary in order to achieve compliance.

2.5 *Configuration of Tested System*

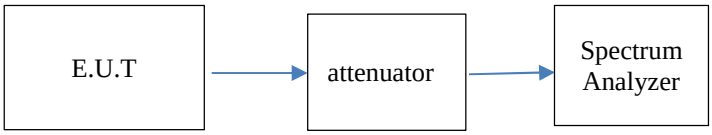

Figure 2. Configuration of Tested System Conducted

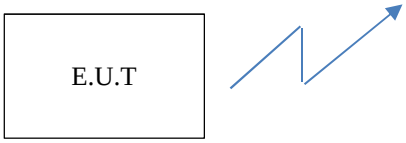

Figure 3. Configuration of Tested System Radiated

POINTER
by PowerFleet

C2PC Declaration of Change

The E.U.T. was originally FCC certified on 11/11/2019 under FCC ID: 2AG69CTSO and ISED certified on 11/12/2019 under IC: 9975A-CTSO.

2. Currently, the following C2PC changes were made to the E.U.T.;
a. USB changed to top entry;
b. L25 replaced with L26 (same value different dimensions);
c. SIM holder changed to Nano sim and location change;
d. Tamper switch moved on board;
e. Connectors changed to Cvilux family;
f. D1 LED removed;
g. Changed BLE location with its antenna while keeping the layout and antenna.
h. Mechanical enclosure modification in order to improve product water sealing

The new device will have two marketing names "CelloTrack Solar" and "LV500". They are identical other than in name.

4. Maximum Conducted Output Power

4.1 *Test Specification*

FCC, Part 15, Subpart C, Section 247(b)(3)

RSS 247, Issue 2, Section 5.4(d)

4.2 *Test Procedure*

(Temperature (22°C)/ Humidity (61%RH))

The E.U.T operation mode and test set-up are as described in Section 2 of this report.

The E.U.T. antenna terminal was connected to the Spectrum Analyzer through an external attenuator and an appropriate coaxial cable (total loss=21.0 dB). Special attention was taken to prevent Spectrum Analyzer RF input overload.

4.3 *Test Limit*

The maximum peak conducted output power of the intentional radiator for systems using digital modulation in the 902-928 MHz, 2400-2483.5 MHz, and 5725-5850 MHz bands: 1 Watt.

4.4 *Test Results*

Protocol Type	Operation Frequency	Power	Power	Limit	Margin
	(MHz)	(dBm)	(mW)	(mW)	(mW)

6. Spurious Radiated Emissions

6.1 *Test Specification*

FCC Part 15, Subpart C, Sections 15.209, 15.205, 15.247(d)

RSS 247, Issue 2, Section 3.3

RSS Gen, Issue 5, Section 8.10

6.2 *Test Procedure*

(Temperature (28°C)/ Humidity (55%RH))
The E.U.T. operation mode and test set-up are as described in Section 2 of this report.

For measurements between 0.009-30MHz:

The E.U.T was tested inside the shielded room and placed on a non-metallic table, 0.8 meters above the ground. The emissions were measured at a distance of 3 meters. The readings were maximized by the turntable azimuth between 0-360°, and the antenna polarization.
The frequency range 0.009MHz-30MHz was scanned.

For measurements between 30-1000MHz:
A preliminary measurement to characterize the E.U.T was performed inside the shielded room at a distance of 3 meters, using peak detection mode and broadband antennas. The preliminary measurements produced a list of the highest emissions. The E.U.T was then transferred to the open site, and placed on a remote-controlled turntable. The E.U.T was placed on a non-metallic table, 0.8 meters above the ground. The emissions were measured at a distance of 3 meters. The readings were maximized by adjusting the antenna height between 1-4 meters, the turntable azimuth between 0-360°, and the antenna polarization. The frequency range 30MHz -1000MHz was scanned and the list of the highest emissions was verified and updated accordingly.

For measurements between 1GHz-25GHz:

The E.U.T was tested inside the shielded room and placed on a non-metallic table, 1.5 meters above the ground. The emissions were measured at a distance of 3 meters. The readings were maximized by the turntable azimuth between 0-360°, and the antenna polarization.
The frequency range 1GHz -25GHz was scanned.

The highest radiation is described in the tables below.

6.3 *FCC Test Limit*

Radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)).

Frequency (MHz)	Field Strength (microvolts/meter)	Measurement distance (meters)	Field Strength* (dBµV/m)	Field Strength* (dBµV/m)@3m
0.009-0.490	2400/F(kHz)	300	48.5-13.8	128.5-73.8
0.490-1.705	24000/F(kHz)	30	33.8-23.0	73.8-63.0
1.705-30.0	30	30	29.5	69.5
30-88	100	3	40.0	40.0
88-216	150	3	43.5	43.5
216-960	200	3	46.0	46.0
Above 960	500	3	54.0	54.0

*The emission limits shown in the above table are based on measurements employing a CISPR quasi-peak detector except for the frequency bands 9-90 kHz, 110-490 kHz and above 1000 MHz. Radiated emission limits in these three bands are based on measurements employing an average detector. For average radiated emission measurements above 1000 MHz, there is also a limit corresponding to 20 dB above the indicated values in the table is specified when measuring with peak detector function.

Figure 20 Table of Limits

6.4 *IC Test Limit*

The emissions from an intentional radiator shall not exceed the field strength levels specified in the following table:

Frequency (MHz)	Magnetic Field strength (microampere/meter)	Measurement distance (meters)	Magnetic Field strength (dBµA/m)	Magnetic Field strength * (dBµA/m)@3m
0.009-0.490	6.37/F(kHz)	300	-3.0-(-37.7)	77.0-42.2
0.490-1.705	63.7/F(kHz)	30	-17.7-(-28.5)	22.3-11.4
1.705-30.0	0.08	30	-21.9	18.0
Frequency (MHz)	**Field strength (microvolts/meter)**	**Measurement distance (meters)**	**Field strength (dBµV/m)**	**Field strength * (dBµV/m)@3m**
30-88	100	3	40.0	40.0
88-216	150	3	43.5	43.5
216-960	200	3	46.0	46.0
Above 960	500	3	54.0	54.0

*The emission limits shown in the above table are based on measurements employing a CISPR quasi-peak detector except for the frequency bands 9-90 kHz, 110-490 kHz and above 1000 MHz. Radiated emission limits in these three bands are based on measurements employing an average detector. For average radiated emission measurements above 1000 MHz, there is also a limit corresponding to 20 dB above the indicated values in the table is specified when measuring with peak detector function.

6.5 *Test Results*

JUDGEMENT: Passed by 0.8 dB

For the operation frequency of 2402 MHz, the margin between the emission level and the specification limit is in the worst case 21.4 dB at the frequency of 2390.0 MHz, horizontal polarization.

For the operation frequency of 2440 MHz, the margin between the emission level and the specification limit is in the worst case 27.8dB at the frequency of 7320.0 MHz, horizontal polarization.

For the operation frequency of 2480 MHz, the margin between the emission level and the specification limit is in the worst case 0.8dB at the frequency of 2483.5 MHz, horizontal polarization.

The EUT met the requirements of the F.C.C. Part 15, Subpart C Sections 15.209, 15.205, 15.247(d) specifications.

The details of the highest emissions are given in *Figure 21*.

Figure 22 Test Equipment Used

7. Antenna Gain/Information

The antenna gain is +2.0 dBi

8. R.F Exposure/Safety

The typical placement of the E.U.T. is wall mounted. The typical distance between the E.U.T. and the user is greater than 20cm.

Calculation of Maximum Permissible Exposure (MPE)

Based on 47CFR1 Section 1.1307(b)(1) and RSS 102 Issue 5, Table 4 Requirements

(a) FCC Limit at 2440 MHz is: $1\frac{mW}{cm^2}$

Using Table 1 of 47CFR1 Section 1.1310 limit for general population/uncontrolled exposures, the above levels are an average over 30 minutes.

(b) ISED Limit: 300-6000MHz = $0.02619f^{0.6834}$ W/m^2=
$0.02619 \times 2440^{0.6834} = 0.02619 \times 206.51 = 5.41$ W/m^2 = 0.541 mW/cm^2

(c) The power density produced by the E.U.T. is:

$$S = \frac{P_t G_t}{4®R^2}$$

P_t = Conducted Transmitted Power 4.6 dBm = 2.88 mW

G_t = Antenna Gain 2.0 dBi = 1.58 numeric

R = Distance From Transmitter 20 cm

(d) The peak power density produced by the E.U.T. is:

$S = 2.88*1.58/4\pi(20)^2 = 9.05 \times 10^{-4}$ mW/cm^2

(e) This is below the FCC/ISED limit.

NOTES:

1. *The cable is manufactured by Commscope*
2. *The cable type is 0623 WBC-400, serial # G020132 and 10m long*

9.3 *Correction factors for Active Loop Antenna ITL # 1075:*

f(MHz)	MAF(dBs/m)	AF(dB/m)
0.01	-33.1	18.4
0.02	-37.2	14.3
0.03	-38.2	13.3
