7. RF EXPOSURE:MPEU-NII-1:

Maximum measured power = 0.3253 W at 5200 MHz (802.11a mode – BW 20 MHz)

With antenna gain = 2.92 dBi

In accordance with KDB 447498 D01 General RF Exposure Guidance v06:

$$PSD = EIRP / (4 * \pi * R^2)$$

$$\Rightarrow 325.3 / (4 * \pi * (20 \text{ cm})^2) = \mathbf{0.0647 \text{ mW/cm}^2} \text{ (limit = 1 mW/cm}^2\text{)}$$

U-NII-3:

Maximum measured power = 1.0354 W at 5785 MHz (802.11a mode – BW 10 MHz)

With antenna gain = 4.05 dBi

In accordance with KDB 447498 D01 General RF Exposure Guidance v06:

$$PSD = EIRP / (4 * \pi * R^2)$$

$$\Rightarrow 1035.4 / (4 * \pi * (20 \text{ cm})^2) = \mathbf{0.20599 \text{ mW/cm}^2} \text{ (limit = 1 mW/cm}^2\text{)}$$

The equipment fulfils the requirements on power density for general population/uncontrolled exposure and therefore fulfils the requirements of 47 CFR §1.1310.

8. MEASUREMENT UNCERTAINTY

To declare, or not, the compliance with the specifications, it was not explicitly taken into account of uncertainty associated with the result(s)

The reported expanded uncertainty of measurement is stated as the standard uncertainty of measurement multiplied by the coverage factor $k=2$, which for normal distribution corresponds to a coverage probability of approximately 95%.

Parameter	Emitech Uncertainty

Radiated emission valid to 26 GHz F < 62.5 MHz:	$\pm 5.14\text{ dB}$

PM-G method (using a gated RF average power meter) of paragraph II.E.3.b of KDB 789033 for U-NII-1
PM method (using an RF average power meter) of paragraph II.E.3.a of KDB 789033 for U-NII-3

Test set up:

U-NII-1:

The measure is realized in conducted mode with a calibrated gated RF average reading power meter.

The power sensor was used on each output port of the EUT. A power meter was used to read the response of the power sensor. Record the power level. Then the results were summed in linear power unit.

U-NII-3:

The measure is realized in conducted mode with a calibrated RF average reading power meter.

The power sensor was used on each output port of the EUT. A power meter was used to read the response of the power sensor. Record the power level.

Next duty cycle correction factor measurement is added. (Correction= $10 \log (1/X) = 0.25 \text{ dB max}$)

This factor is already included on the results tables

Then the results were summed in linear power unit.

Equipment under test operating condition:

The equipment under test is blocked in continuous modulated transmission mode, at the highest output power level at which the transmitter is intended to operate (see §2).

We used for power source the internal fully charged battery

June 1, 2018**Technician :** M. DUMESNIL**Standard:** FCC Part 15**Test procedure:** paragraph 15.205, paragraph 15.209, paragraph 15.407 (b)

paragraph II.G.2 of KDB 789033

paragraph II.G.4 of KDB 789033

paragraph II.G.5 of KDB 789033

paragraph II.G.6 of KDB 789033 (method AD)

Test set up:

The product is oriented in this normal position.

The measure is realized on open area test site under 1 GHz and in anechoic chamber above 1 GHz.

When the system is tested in an open area test site (OATS), the EUT is placed on a rotating table, 0.8m from a ground plane.

When the system is tested in anechoic chamber, the EUT is placed on a rotating table, 1.5 m from a ground plane.

Zero degree azimuths correspond to the front of the device under test.

Frequency range: From 9 kHz to 40 GHz.**Detection mode:** Quasi-peak (F < 1 GHz)

Peak / Average (F > 1 GHz)

Bandwidth: 200Hz (9 kHz < F < 150kHz)
9 kHz (150 kHz < F < 30MHz)
120 kHz (30 MHz < F < 1 GHz)
100 kHz / 1 MHz (F > 1 GHz)**Distance of antenna:** 10 m below 1 GHz
3 m between 1 GHz and 13 GHz
1 m between 13 GHz and 18 GHz
0.4 m between 18 GHz and 26 GHz
0.3 m between 26 GHz and 40 GHz**Antenna height:** 1 to 4 meters (in open area test site) / 1.5 meter (in anechoic room)**Antenna polarization:** vertical and horizontal (only the highest level is recorded)

Equipment under test operating condition:

The equipment under test is blocked in continuous modulated transmission mode, at the highest output power level at which the transmitter is intended to operate (see §2).

We used for power source the internal fully charged battery

For 802.11a and 802.11an modes, duty cycle factor for average measurement is then added. (Correction= $10 \log (1/X) = 0.25$ dB max)

This factor is already included on the results (tables and graphs)

Test conclusion:

RESPECTED STANDARD

11. MAXIMUM POWER SPECTRAL DENSITY

Temperature (°C) : 24.1-24.4

Humidity (%HR): 42

 Date : April 23, 2018 and
April 24, 2018

Technician : M. DUMESNIL

Standard: FCC Part 15

Test procedure: paragraph 15.407 (a)

Paragraph II.F of KDB 789033 and SA2 method of paragraph II.E.2.d of KDB 789033

Test set up:

The measure is realized in conducted mode with an analyser and the following settings are used.

Bandwidth selected	10 MHz		20 MHz	
U-NII band	U-NII-1	U-NII-3	U-NII-1	U-NII-3
Span	20 MHz		40 MHz	
RBW	1 MHz	500 kHz	1 MHz	500 kHz
VBW	3 MHz	3 MHz	3 MHz	3 MHz
detector	RMS		RMS	
Points	8001		8001	
Trace mode	Avg power		Avg power	
Number of traces	100		100	

Then the peak marker function is used.

 Next duty cycle correction factor measurement is added. (Correction= $10 \log (1/X) = 0.25 \text{ dB max}$)

This factor is already included on the results (tables only, graphs in appendix are without)

The measure is repeated on each output port of the EUT. Then the results were summed in linear power unit.

Equipment under test operating condition:

The equipment under test is blocked in continuous modulated transmission mode, at the highest output power level at which the transmitter is intended to operate (see §2).

We used for power source the internal fully charged battery

- According with KDB 662911 the antenna gain is calculated as follow:

Total gain = antenna gain (dBi) + array gain

 With Array Gain = $10 \log (\text{NANT}/\text{NSS}) \text{ dB} = 3$ and with NANT=2 and NSS=1

 Total gain = $2.92 + 3 = 5.92 \text{ dBi}$ for U-NII-1 band

 Total gain = $4.05 + 3 = 7.05 \text{ dBi}$ for U-NII-3 band (The limit is so reduced by 1.05 dBm in order to taken in account the amount in dB that the directional gain of the antenna exceeds 6 dBi for U-NII-3 band).

See appendix for plot
