## Laboratories Introduction

SIEMIC, headquartered in the heart of Silicon Valley, with superior facilities in US and Asia, is one of the leading independent testing and certification facilities providing customers with one-stop shop services for Compliance Testing and Global Certifications.

In addition to testing and certification, SIEMIC provides initial design reviews and compliance management throughout a project. Our extensive experience with China, Asia Pacific, North America, European, and International compliance requirements, assures the fastest, most cost effective way to attain regulatory compliance for the global markets.

### Accreditations for Conformity Assessment

| Country/Region | Scope                              |
|----------------|------------------------------------|
| USA            | EMC, RF/Wireless, SAR, Telecom     |

Adapter:

Model: A88-501500

Input: AC100-240V~50/60Hz,0.35A

Output: DC 5.0V,1.5A

Battery:

Spec: 3.85V,2820mAh

Input Power:

GPRS/EGPRS Multi-slot class: 8/10/12

FCC ID: 2AG8KL551

## 5. Test Summary

The product was tested in accordance with the following specifications.

All testing has been performed according to below product classification:

| FCC Rules                       | Description of Test  | Result     |
|---------------------------------|--|------------|
| §15.203                         | Antenna Requirement  | Compliance |
| §15.247 (a)(2)                  | DTS (6 dB) CHANNEL BANDWIDTH   | Compliance |
| §15.247(b)(3)                   | Conducted Maximum Output Power   | Compliance |
| §15.247(e)                      | Power Spectral Density   | Compliance |
| §15.247(d)                      | Band-Edge & Unwanted Emissions into Restricted Frequency Bands                   | Compliance |
| §15.207 (a),                    | AC Power Line Conducted Emissions  | Compliance |
| §15.205, §15.209,<br>§15.247(d) | Radiated Spurious Emissions & Unwanted Emissions into Restricted Frequency Bands | Compliance |

### Measurement Uncertainty

| Emissions                                 |   |               |
|---|---|---------------|
| Test Item                                 | Description   | Uncertainty   |
| Band Edge and Radiated Spurious Emissions | Confidence level of approximately 95% (in the case where distributions are normal), with a coverage factor of 2 (for EUTs < 0.5m X 0.5m X 0.5m) | +5.6dB/-4.5dB |
| -   | -   | -             |

## 6. Measurements, Examination And Derived Results

### 6.1 Antenna Requirement

#### **Applicable Standard**

According to § 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this section. The manufacturer may design the unit so that a broken antenna can be replaced by the user, but the user of a standard antenna jack or electrical connector is prohibited. The structure and application of the EUT were analyzed to determine compliance with section §15.203 of the rules. §15.203 state that the subject device must meet the following criteria:

- a. Antenna must be permanently attached to the unit.
- b. Antenna must use a unique type of connector to attach to the EUT.

Unit must be professionally installed, and installer shall be responsible for verifying that the correct antenna is employed with the unit.

And according to FCC 47 CFR section 15.247 (b), if the transmitting antennas of directional gain greater than 6dBi are used, the power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

#### **Antenna Connector Construction**

The EUT has 3 antennas:

A permanently attached PIFA antenna for Bluetooth/BLE/WIFI/GPS, the gain is 0.87dBi for Bluetooth/BLE, the gain is 0.87dBi for WIFI, the gain is 0.89dBi for GPS.

A permanently attached PIFA antenna for GSM/PCS/UMTS, the gain is -1.27dBi for GSM850, 0.84dBi for PCS1900, -1.27dBi for UMTS-FDD Band V, 0.84dBi for UMTS-FDD Band IV, 0.84dBi for UMTS-FDD Band II.

A permanently attached PIFA antenna for LTE Band II/ IV/VII/XII/XVII, the gain is 0.54dBi for LTE Band II, the gain is 0.84dBi for LTE Band IV, the gain is 0.9dBi for LTE Band VII, the gain is -2.02dBi for LTE XII, the gain is -2.06dBi for LTE Band XVII.

**The antenna meets up with the ANTENNA REQUIREMENT.**

**Result:** Compliance.

|            |   |
|------------|---|
| Test Setup |   |
| Procedure  | <ol style="list-style-type: none"> <li>The EUT was switched on and allowed to warm up to its normal operating condition.</li> <li>The test was carried out at the selected frequency points obtained from the EUT characterization. Maximization of the emissions, was carried out by rotating the EUT, changing the antenna polarization, and adjusting the antenna height in the following manner: <ol style="list-style-type: none"> <li>Vertical or horizontal polarization (whichever gave the higher emission level over a full rotation of the EUT) was chosen.</li> <li>The EUT was then rotated to the direction that gave the maximum emission.</li> <li>Finally, the antenna height was adjusted to the height that gave the maximum emission.</li> </ol> </li> <li>The resolution bandwidth and video bandwidth of test receiver/spectrum analyzer is 120 kHz for Quasi Peak detection at frequency below 1GHz.</li> <li>The resolution bandwidth of test receiver/spectrum analyzer is 1MHz and video bandwidth is 3MHz with Peak detection for Peak measurement at frequency above 1GHz.</li> </ol> <p>The resolution bandwidth of test receiver/spectrum analyzer is 1MHz and the video bandwidth is 10Hz with Peak detection for Average Measurement as below at frequency above 1GHz.</p> <ol style="list-style-type: none"> <li>Steps 2 and 3 were repeated for the next frequency point, until all selected frequency points were measured.</li> </ol> |
| Remark     | Different RF configuration has been evaluated but not much difference was found. The data presented here is the worst case data with EUT under 802.11n – HT20-2437MHz mode.   |
| Result     | <input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail  |

| 17782           | 40.87               | PK               | H              | 45.22              | 11.35           | 32.38              | 65.06               | 74             | -8.94       |

**Note:**

1, The testing has been conformed to  $10 \times 2480 \text{ MHz} = 24,800 \text{ MHz}$

2, All other emissions more than 30 dB below the limit

3, X-Axis, Y-Axis and Z-Axis were investigated. The results above show only the worst case.

## Annex C. ii. SUPPORTING EQUIPMENT DESCRIPTION

The following is a description of supporting equipment and details of cables used with the EUT.

### Supporting Equipment:

| Manufacturer        | Equipment Description | Model      | Serial No |
|---------------------|-----------------------|------------|-----------|
| Posh Mobile Limited | Adapter               | A88-501500 | S0523DF2  |

### Supporting Cable:

| Cable type | Shield Type  | Ferrite Core | Length | Serial No |
|------------|--------------|--------------|--------|-----------|
| USB Cable  | Un-shielding | No           | 0.8m   | S0523DF2  |

|                 |                 |

## Annex E. DECLARATION OF SIMILARITY

### Posh Mobile Limited

To: SIEMIC, 775 Montague Expressway, Milpitas, CA 95035, USA

### Declaration Letter

Dear Sir,

For our business issue and marketing requirement, we would like to list 4 model numbers on the FCC certificates and reports, as following:

Model No.: L551 L551A L551B L551C

We declare that, all the model PCB, Antenna and Appearance shape, accessories are the same.

The difference of these is listed as below:

| Main Model No. | Serial Model No.  | Difference                     |
|----------------|-------------------|--------------------------------|
| L551           | L551A L551B L551C | Different model name and color |

Thank you!
