

RF Exposure

ReferenceTest Report No: ULR-TC568821300000029F/30F

1 RF Exposure Report

1.1 RF Exposure Measurement

The limit for Maximum Permissible Exposure (MPE) specified in FCC Part 1 Subpart I 1.1310 is followed. The gain of the antennas used in the product are extracted from the Antenna data sheets provided and also the maximum total power input to the antenna is measured. Through the Friis transmission formula and the maximum gain of the antenna, we can calculate the distance, away from the product, where the limit of MPE is reached.

Although the Friis Transmission formula is far field assumption, the calculated result of that is an overprediction for near field power density. It is taken as worst case to specify the safety range.

1.2 RF Exposure Limit

According to FCC Part 1 Subpart I 1.1310 The criteria listed in the following table shall be used to evaluate the environmental impact of the human exposure to radio-frequency (RF) radiation as specified in 1.1307 (b)

| Frequency Range (MHz) | Electric Field Strength (V/m) | Magnetic Field Strength (A/m) | Power Density (mW/cm ²) | | |
|---|----------------------------------|----------------------------------|--|--|--|
| Limits for Occupational / controlled Exposures | | | | | |
| 300 - 1500 | | F/3 | | | |
| 1500 – 100000 | | | 5.0 | | |
| Limits for General population / Uncontrolled Exposure | | | | | |
| 300 - 1500 | | | F/1500 | | |
| 1500 – 100000 | | | 1.0 | | |

Table 1: Limits for Maximum Permissible Exposure (MPE) as per FCC

| 1.2.3 Classification | | | |
| The antenna of this pr | oduct, under normal use condition, is at least 20cm away | from the body of the | |
| user. Warning stateme | ent to the user for keeping at least 20cm or more separati | on distance from the | |
| • | luded in the User manual. So, this device is classified as | | |
| | | | |
| | | | |
| Note: ± 1 dB tune up v | value is considered for MPE calculation. | | |

1.3 Test Results

Manufacturer has declared the tune-up value as ±1 dBm is considered in MPE calculation.

Antenna: PCB Antenna Antenna gain (G): 0dBi for 2.4 GHz; Gain in Linear scale: 1;

Table 2: Maximum Permissible exposure

| Protocol | Data Rate | Antenna Gain in Linear Scale | Channel Frequency (MHz) | Pout Pout including (dBm) Tuneup (mW) | | Power Density (mW/cm²) | FCC Limit (mW/cm ²) |

1.4 Conclusion

Table 3 & Table 4: list possible combination; hence, the RF exposure analysis concluded that the RF exposure is compliant as per the limit specified in clause 1.2 of this report
