# EXHIBIT 1 - PRODUCT LABELING

Proposed FCC ID Label Format

Specifications: Text is black in color and justified. Labels are printed in indelible ink on permanent adhesive silk-screened onto the EUT or shall be affixed at a conspicuous location on the EUT.

Because the material in other parts of the product is not suitable for placing label, label is placed on the I/O interface cover. The user must open this cover when charging. The cover is easily to open to ensure that the label will be readily visible at the time of purchase

Proposed Label Location on EUT

FCC ID Label Location
