

## RF Exposure Evaluation Declaration

| Product Name | : | LED lamp         |
|--------------|---|------------------|
| Model No.    | : | 9290022167       |
| FCC ID       | : | 2AGBW9290022167X |
| IC           | : | 20812-2167X      |

- Applicant : Signify (China) Investment Co., Ltd.
- Address : Building no.9, Lane 888, Tianlin Road, Minhang District, Shanghai 200233, China

| Date of Receipt | : | May. 22, 2019         |
|-----------------|---|-----------------------|
| Issued Date     | : | May. 29, 2019         |
| Report No.      | : | 1952139R-RF-US-P20V01 |
| Report Version  | : | V 1.0                 |

Note: This appendix report is based on DEKRA report No. 1782159R-RF-US-P20V01, only modify the EUT rating, Brand name, Model No., Applicant, Manufacturer, FCC/IC ID and Address.

The test results relate only to the samples tested.

The test results shown in the test report are traceable to the national/international standard through the calibration of the equipment and evaluated measurement uncertainty herein.

This report must not be used to claim product endorsement by A2LA or any agency of the government.

The test report shall not be reproduced without the written approval of DEKRA Testing & Certification (Suzhou) Co., Ltd.

### Test Report Certification Issued Date : May. 29, 2019

Issued Date : May. 29, 2019 Report No. : 1952139R-RF-US-P20V01

#### 1. RF Exposure Evaluation

#### 1.1. Limits

#### For FCC:

According to FCC 1.1310: The criteria listed in the following table shall be used to evaluate the environment impact of human exposure to radio frequency (RF) radiation as specified in 1.1307(b)

#### LIMITS FOR MAXIMUM PERMISSIBLE EXPOSURE (MPE)

| Frequency<br>Range (MHz)                                  | Electric<br>Field<br>Strength<br>(V/m)         | Magnetic<br>Field<br>Strength<br>(A/m) | Power<br>Density<br>(mW/cm2) | Average<br>Time<br>(Minutes) |  |  |  |  |
|---|--|--|------------------------------|------------------------------|--|--|--|--|
| (A) Limits for C  | (A) Limits for Occupational/ Control Exposures |  |                              |                              |  |  |  |  |
| 300-1500  | F/300 6  |  |                              |                              |  |  |  |  |
| 1500-100,000  |  |  | 5                            | 6                            |  |  |  |  |
| (B) Limits for General Population/ Uncontrolled Exposures |  |  |                              |                              |  |  |  |  |
| 300-1500  |  |  | F/1500                       | 6                            |  |  |  |  |
| 1500-100,000  |  |  | 1                            | 30                           |  |  |  |  |

F= Frequency in MHz

Friis Formula

Friis transmission formula: Pd = (Pout\*G)/(4\*pi\*r2)

Where

 $Pd = power density in mW/ cm^2$ 

Pout = output power to antenna in mW

G = gain of antenna in linear scale

Pi = 3.1416

R = distance between observation point and center of the radiator in cm

Pd is the limit of MPE, 1 mW/cm<sup>2</sup>. If we know the maximum gain of the antenna and the total power input to the antenna, through the calculation, we will know the distance r where the MPE limit is reached.

#### For ISED:

According to RSS 102 Issue 5: The criteria listed in the following table shall be used to evaluate the environment impact of human exposure to radio frequency (RF) radiation as specified in RSS 102 Clause 4

LIMITS FOR MAXIMUM PERMISSIBLE EXPOSURE (MPE)

| Frequency Range<br>(MHz) | Electric Field<br>(V/m rms) | Magnetic Field<br>(A/m rms)   | Power Density<br>(W/m <sup>2</sup> ) | Reference Period<br>(minutes) |  |
|--------------------------|-----------------------------|-------------------------------|--------------------------------------|-------------------------------|--|
| $0.003 - 10^{21}$        | 83                          | 90                            |                                      | Instantaneous*                |  |
| 0.1-10                   | -                           | 0.73/ f                       | -                                    | 6**                           |  |
| 1.1-10                   | $87/f^{0.5}$                | 2 1 1                         | (123)                                | 6**                           |  |
| 10-20                    | 27.46                       | 0.0728                        | 2                                    | 6                             |  |
| 20-48                    | $58.07/f^{0.25}$            | $0.1540/f^{0.25}$             | $8.944/f^{0.5}$                      | 6                             |  |
| 48-300                   | 22.06                       | 0.05852                       | 1.291                                | 6                             |  |
| 300-6000                 | $3.142 f^{0.3417}$          | $0.008335 f^{0.3417}$         | $0.02619 f^{0.6834}$                 | 6                             |  |
| 6000-15000               | 61.4                        | 0.163                         | 10                                   | 6                             |  |
| 15000-150000             | 61.4                        | 0.163                         | 10                                   | $616000/f^{1.2}$              |  |
| 150000-300000            | $0.158 f^{0.5}$             | $4.21 \times 10^{-4} f^{0.5}$ | $6.67 \ge 10^{-5} f$                 | $616000/f^{1.2}$              |  |

\*Based on nerve stimulation (NS).

\*\* Based on specific absorption rate (SAR).

F= Frequency in MHz

Friis Formula

Friis transmission formula:  $Pd = (Pout^{*}G)/(4^{*}pi^{*}r^{2})$ 

Where

Pd = power density in mW/cm2

Pout = output power to antenna in mW

G = gain of antenna in linear scale

Pi = 3.1416

R = distance between observation point and center of the radiator in cm

Pd is the limit of MPE, 0.540 mW/cm<sup>2</sup> for 2.4GHz. If we know the maximum gain of the antenna and the total power input to the antenna, through the calculation, we will know the distance r where the MPE limit is reached.

#### 1.2. Test Procedure

Software provided by client enabled the EUT to transmit and receive data at lowest, middle and highest channel individually.

The temperature and related humidity: 18 and 78% RH.

#### 1.3. Test Result of RF Exposure Evaluation
