  - c. Touch password Set password to unlock the screen.
  - d. Touch “no” Stop this application.

- 2) Set up SIM card lock Enter ( 4-8numbers ) PIN to set the lock of SIM.

SIM card PIN (Personal Identification Number) is to prevent unauthorized use of SIM cards.PIN code provided with SIM. The service provider gives the initial value.

Change a blocked PIN code, you need to open the "SIM Lock ", then go to Change Password screen, the phone will automatically prompt enter the old PIN code and asked to enter a new PIN code twice,finally the phone will prompt that change the code successfully. If you enter the PIN with error for three times, SIM card PIN codes will be automatically locked, PUK codes is usually supplied with SIM card. If no, you should go to the service provider for the codes.

If you enter 10 times wrong PUK code, the SIM card will be permanently locked.

- 3) Password visible Password visible when enter it
- 4) Select device administration Add or delete device manager.
- 5) Use security credentials Allow application visit security credentials or other credentials.
- 6) Install from SD card Install the encrypted certificate from SD card.
- 7) set password Set or change Certificate store password
- 8) clear storage Clear all the contents of the certificate store and reset their passwords.

## 2. SIM management

- 1) Touch it to choose or to disable the SIM card, the card is grey when disabled, the flight mode displays on status bar.
- 2) The default SIM card ,you can choose Voice call,Video call,Messaging,Data connection

## 3. wallpaper

You can choose the album, wallpapers or video wallpaper set as the default wallpaper

## 4. Accessibility

- 1) Large text
- 2) Power button ends call: According to the "power" button to end the call to open, call, press the "power" will end the call and not shut down the screen

- 3) Auto-rotate screen
- 4) Speak passwords
- 5) Touch & hold delay
- 6) Install web scripts
- 7) Quick boot

- **Input and control**

1. **Languages and input**

- 1) Selecting Language: Include all the languages on the phone.
- 2) Personal Dictionary : Add words to custom dictionary or delete.
- 3) Keyboard Settings: Vibrating when buttons are pressed, Playing sound when buttons are pressed, Capitalizing automatically, Speech Input(by microphone on the keyboard), Inputting words(speech can be altered by sliding finger on space key), Displaying tips(activate predictive function when you input words); Auto-Text(Automatically input certain words when press space key or specified keys)
- 4)Input method: you can select Android keyboard or google pinyin input method

- **AIR Gesture**

1. **Air browse:**

- 1 ) Move between pages
- 2 ) Mute incoming calls and pause playing sounds when screen on

2. **Air call-accept :** Ware your hand over the screen to accept incoming call.

3. **Smart screen:** When your eyes have been detected,the screen will scroll according to the angle at which you tilt your head or the devices.

4. **Quick gesture entry:** Quick entry the application with gestures while the phone in the deep sleep mode.

- **My account**

1. Add account
2. Backup and Restore

- 1)Backup my data will application data, WLAN password and other Settings backup to Google's servers
- 2) Resetting to Factory Settings, Clear all data stored on the phone.

- **Device manager**

- 1.Date and Time

- 1) Automation: Use date and time provided by Network.
- 2) Setting Date: Touch "+" and "-" to set date.
- 3) Selecting Time Zone: Select Time Zone according to where you are.  
For China please select "GMT+08:00, China Standard Time".
- 4) Setting Time: Touch "+" and "-" to set time.
- 5) Use 24 Hour Time Format: ON/OFF
- 6) Select Date Format: There are six kinds of formats you can choose from:  
Regional(12/31/2015) is default setting  
12/31/2015, 31/12/2015, 2015/12/31,  
Tue,Dec 31,2015; Tue, 31 Dec, 2015; 2015 Dec 31,Thu

2. Storage

- a. Can view the SD card and cell phone memory usage.

- b. Can you mount SD card or Erase SD card.
- c. Can choose the default memory.

### 3. Battery

Boot time that use and each module to use power in general

### 4. Developer options

- a. USB Debugging: USB debugging only for development and USB disk.
- b. Stay awake: Screen will never sleep while charging.
- c. Allow mock locations
- d. Desktop backup password
- e. Strict mode enabled
- f. Pointer location
- g. Show touches
- h. Show screen updates
- i. Show CPU usage
- j. Force GPU rendering
- k. Window animation scale:
- l. Transition animation scale
- m. Don't keep activities
- n. Background process limit
- o. Show all APRs

### 5. About phone

You can check the information on status bar and remaining power.

## 19. Notices for the use of phone

Your phone is a product of superior design and craftsmanship and should be treated with care. The following suggestions can help you comply with the terms of repair kits, to extend the life of mobile phone.

- 1) Place the mobile phone and their parts and components out of reach of small children.
- 1) Keep the phone dry, rain, humidity and all types of liquids which contain minerals will corrode electronic circuits.
- 2) Don't touch the phone with wet hands when charging, it will cause electric shock or damage the phone.
- 3) Avoid place the device in high temperature environment. Temperatures will shorten the life of electronic devices, damage batteries, and warp or melt certain plastics.
- 4) Avoid place the device in too low temperature environment. When the temperature rises, the phone will produce water vapor that may damage electronic circuit.
- 5) Avoid place the phone in dusty, dirty places, otherwise parts may be damaged.
- 6) To avoid the phone in a lit cigarette, near open flame or any heat source.
- 7) Do not open the device, non-professional approach will do damage to the phone.
- 8) Do not throw it from height, knock or shake the phone, rough handling can damage internal circuit boards.
- 9) Do not paint the phone, because the paint will block headphones, microphones or other removable parts, and lead it not work.
- 10) Use clean, soft, dry cloth to clean the camera, light sensor lenses. Prohibit the use of harmful chemicals and cleaning agents, cleaning fluids to clean the phone
- 11) If mobile phone, battery, charger, or mobile phone accessories are defective, send to the nearest qualified service center for inspection.
- 12) If necessary, Service Centre staff will assist you and will arrange for phone repairs.

### FCC Statement

1. This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference.

(2) This device must accept any interference received, including interference that may cause undesired operation.

2. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

Reorient or relocate the receiving antenna.

Increase the separation between the equipment and receiver.

Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

Consult the dealer or an experienced radio/TV technician for help.

### SAR Information Statement

Your wireless phone is a radio transmitter and receiver. It is designed and manufactured not to exceed the emission limits for exposure to radiofrequency (RF) energy set by the Federal Communications Commission of the U.S. Government. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons, regardless of age and health. The exposure standard for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6 W/kg. \* Tests for SAR are conducted with the phone transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the phone while operating can be well below the maximum value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output. Before a phone model is available for sale to the public, it must be tested and certified to the FCC that it does not exceed the limit established by the government adopted requirement for safe exposure. The tests are performed in positions and locations (e.g., at the ear and worn on the body) as required by the FCC for each model. The highest SAR value for this model phone when tested for use at the ear is **1.002W/Kg** and when worn on the body, as described in this user guide, is **0.778W/Kg**(Body-worn measurements differ among phone models, depending upon available accessories and FCC requirements). The maximum scaled SAR in hotspot mode is **0.778W/Kg**. While there may be differences between the SAR levels of various phones and at various positions, they all meet the government requirement for safe exposure. The FCC has granted an Equipment Authorization for this model phone with all reported SAR levels evaluated as in compliance with the FCC RFexposure guidelines. SAR information on this model phone is on file with the FCC and can be found under the Display Grant section of <http://www.fcc.gov/oet/fccid> after searching on FCC ID:**2AGE2-EK4** Additional information on Specific Absorption Rates (SAR) can be found on the Cellular Telecommunications Industry Association (CTIA) web-site at <http://www.wow-com.com>. \* In the United States and Canada, the SAR limit for mobile phones used by the public is 1.6 watts/kg (W/kg) averaged over one gram of tissue. The standard incorporates a substantial margin of safety to give additional protection for the public and to account for any variations in measurements.

### Body-worn Operation

This device was tested for typical body-worn operations. To comply with RF exposure requirements, a minimum separation distance of **10mm** must be maintained between the user's body and the handset, including the antenna. Third-party belt-clips, holsters, and similar accessories used by this device should not contain any metallic components. Body-worn accessories that do not meet these requirements may not comply with RF exposure requirements and should be avoided. Use only the supplied or an approved antenna.
