

FCC/IC - TEST REPORT

Report Number	68.910.19.0011.01 Date of Issue: February 27, 2020										
Model	: MT02-0101-069005										
Product Type	: Transmitter										
Applicant	: Rollease Acmeda Inc										
Address	750 East Main Street, 7th Floor Stamford Connecticut										
	United States 06902										
Production Facility	Ningbo Dooya Mechanic & Electronic Technology Co., Ltd.										
Address	No.168 Shengguang Road, Luotuo, Zhenhai, Ningbo,										
	Zhejiang province, P.R.China 315202										
Test Result	n Positive O Negative										
Total pages including Appendices	18										

TÜV SÜD Certification and Testing (China) Co., Ltd. Shenzhen Branch is a subcontractor to TÜV SÜD Product Service GmbH according to the principles outlined in ISO 17025.

TÜV SÜD Certification and Testing (China) Co., Ltd. Shenzhen Branch reports apply only to the specific samples tested under stated test conditions. Construction of the actual test samples has been documented. It is the manufacturer's responsibility to assure that additional production units of this model are manufactured with identical electrical and mechanical components. The manufacturer/importer is responsible to the Competent Authorities in Europe for any modifications made to the production units which result in non-compliance to the relevant regulations. TÜV SÜD Certification and Testing (China) Co., Ltd. Shenzhen Branch shall have no liability for any deductions, inferences or generalizations drawn by the client or others from TÜV SÜD Certification and Testing (China) Co., Ltd. Shenzhen Branch issued reports.

This report is the confidential property of the client. As a mutual protection to our clients, the public and ourselves, extracts from the test report shall not be reproduced except in full without our written approval

TÜV SÜD Certification and Testing (China) Co., Ltd. Shenzhen Branch Building 12&13, Zhiheng Wisdomland Business Park, Nantou Checkpoint Road 2, Nanshan District, Shenzhen City, 518052, P. R. China Tel. +86 755 8828 6998, Fax: +86 755 8828 5299

3 Description of the Equipment Under Test

Product/PMN:	Transmitter
Model no./HVIN/PMN:	MT02-0101-069005
FCC ID:	2AGGZMT020101069005
IC:	21769-MT020101005
Rating:	3VDC
RF Transmission Frequency:	433.925MHz
Modulation:	FSK
Antenna Type:	PCB Antenna
Antenna Gain:	1dBi
Description of the EUT:	The Equipment Under Test (EUT) is a Transmitter operated at 433.925MHz

4 Summary of Test Standards

Test Standards						
FCC Part 15 Subpart C	PART 15 - RADIO FREQUENCY DEVICES					
10-1-2019 Edition	Subpart C - Intentional Radiators					
RSS-Gen Issue 5	General Requirements and Information for the Certification of					
March 2019	Radio Apparatus					
Amendment 1						
RSS-210 Issue 10	RSS-210 — Licence-exempt Radio Apparatus (All Frequency					
December 2019	Bands): Category I Equipment					

All the test methods were according to ANSI C63.10-2013.

5 Summary of Test Results

	-	Technical Requireme	nts		
FCC Part 15 Sub	part C, RSS-2	10 Issue 10			
Test Condition		Pages	Test Site	Test Result	
§15.207	RSS-GEN A8.8	Conducted emission AC power port	N/A	N/A	Not Applicable
§15.205, §15.209, 15.35 (c)§15.231(b)	RSS-210 A.1.2	Radiated Emission, 30MHz to 4.5GHz	10	Site 1	Pass
§15.231(c)	RSS-210 A.1.3	Bandwidth Measurement	15	Site 1	Pass
§15.231(a)(1)	RSS-210 A.1.1(a)	Deactivation Time	16	Site 1	Pass
§15.203	RSS-Gen 6.8	Antenna requirement		See Note 2	Pass

Note 1: N/A=Not Applicable.

Note 2: The EUT uses an PCB Antenna, which gain is 1dBi. In accordance to §15.203, It is considered sufficiently to comply with the provisions of this section.

6 General Remarks

Remarks

This submittal(s) (test report) is intended for FCC ID: 2AGGZMT020101069005, IC: 21769-MT020101005 complies with Section 15.205, 15.207, 15.209, 15.231 of the FCC Part 15, Subpart C Rules, RSS-Gen Issue 5 and RSS-210 issue 10.

SUMMARY:

All tests according to the regulations cited on page 5 were

n - Performed

O - Not Performed

The Equipment Under Test

n - Fulfills the general approval requirements.

• - **Does not** fulfill the general approval requirements.

8 Test Setups

8.1 Radiated test setups

Below 1GHz

Above 1GHz

8.2 Conducted RF test setups

9 Test Methodology

9.1 Radiated Emission

Test Method

1: The EUT was place on a turn table which is 1.5m above ground plane for above 1GHz and 0.8m above ground for below 1GHz at 3 meter chamber room for test. The table was rotated 360 degrees to determine the position of the highest radiation.

2: The EUT was set 3 meters away from the interference – receiving antenna, which was mounted on the top of a variable – height antenna tower.

3: The height of antenna is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.

4: For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.

5: Use the following spectrum analyzer settings According to C63.10:

For Above 1GHz

Span = wide enough to capture the peak level of the in-band emission and all spurious RBW = 1MHz, VBW≥3RBW for peak measurement, Sweep = auto, Detector function = peak, Trace = max hold.

For Below 1GHz

Use the following spectrum analyzer settings:

Span = wide enough to capture the peak level of the in-band emission and all spurious RBW = 100 KHz, VBW≥3RBW for peak measurement, Sweep = auto, Detector function = peak, Trace = max hold.

Note:

1: The resolution bandwidth and video bandwidth of test receiver/spectrum analyzer is 120 KHz for Quasi-peak detection (QP) at frequency below 1GHz.

2: The resolution bandwidth of test receiver/spectrum analyzer is 1MHz and the video bandwidth is 3MHz for peak detection (PK) at frequency above 1GHz.

3: The resolution bandwidth of test receiver/spectrum analyzer is 1MHz and the video bandwidth is 3MHz for RMS Average (duty cycle ≥98%) for peak detection at frequency above 1GHz

4:If the emission is pulsed (duty cycle <98%), modify the unit for continuous operation: use the settings shown above, then correct the reading by subcontracting the peak to average duty cycle correction factor 20log (duty cycle)., derived from the appropriate duty cycle calculation.

Limit

According to §15.231 (b), the and RSS-210 A.1.2 field strength of emissions from intentional radiators operated under this section shall not exceed the following:

Fundamental frequency (MHz)	Field Strength of Fundamental (Microvolts /meter)	Field Strength of spurious emissions ((Microvolts /meter)			
40.66-40.70	2,250	225			
70-130	1,250	125			
130-174	1,250 to 3,370 *	125 to 375 *			
174-260	3,750	375			
260-470 √	3,750 to 12, 500*	375 to 1,250*			
Above 470	12,500	1,250			

Spurious radiated emissions for transmitter

According to C63.10, if the peak (or quasi-peak) measured value complies with the average limit, it is unnecessary to perform an average measurement, so AV emission value did not show in below table if the peak value complies with average limit.

		Radiated Emissions											
Value	Emissions Frequency MHz	E-Field Polarity	Field at 3m dBµV/m	Average Factor dB	Net Field at 3m dBµV/m	Limit dBµV/m	Margin	Emission Type					
Below 1GHz													
PK	433.925	Н	84.88	0.00	68.89	100.83	31.94	Fundamental					
AV	433.925	Н	84.88	-7.20	77.68	80.83	3.15	Fundamental					
PK	433.925	V	67.98	0.00	67.98	100.83	32.85	Fundamental					
AV	433.925	V	67.98	-7.20	60.78	80.83	20.05	Fundamental					
PK	867.850	Н	63.72	0.00	63.72	80.83	17.11	Spurious					
AV	867.850	Н	63.72	-7.20	56.52	60.83	4.31	Spurious					
PK	867.850	V	34.04	0.00	34.04	80.83	46.79	Spurious					
AV	867.850	V	34.04	-7.20	26.84	60.83	33.99	Spurious					
Above	1GHz												
PK	3037.48	Н	52.99	0.00	52.99	74	21.01	Spurious					
AV	3037.48	Н	52.99	-7.2	45.79	54	8.21	Spurious					
PK	3037.48	V	45.42	0.00	45.42	74	28.58	Spurious					
AV	3037.48	V	45.42	-7.2	38.22	54	15.78	Spurious					

Remark:

1: AV Emission Level= PK Emission Level+20log(dutycycle)

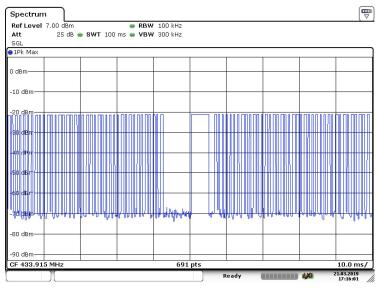

2: Data of measurement within this frequency range shown "/" in the table above means the reading of emissions are attenuated more than 20db below the permissible limits or the field strength is too small to be measured.
3: "*" means the emission(s) appear within the restrict bands shall follow the requirement of section 15.205.

4: Corrected Amplitude = Read level + Corrector factor

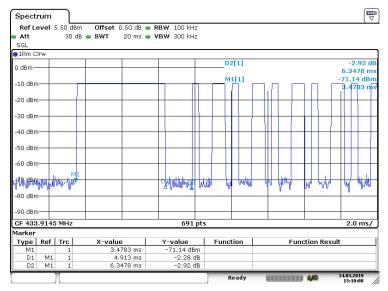

Above 1GHz: Corrector factor = Antenna Factor + Cable Loss- Amplifier Gain Below 1GHz: Corrector factor = Antenna Factor + Cable Loss

Duty Cycle =[4.913ms+(0.7971*27)+(0.3913*44)]/100 (ms) =43.65% Duty Cycle Factor =20log (Duty Cycle) =-7.2

EMC_SZ_FR_21.00 FCC Release 2014-03-20 TÜV SÜD Certification and Testing (China) Co., Ltd. Shenzhen Branch Building 12&13, Zhiheng Wisdomland Business Park, Nantou Checkpoint Road 2, Nanshan District, Shenzhen City, 518052, P. R. China Tel. +86 755 8828 6998, Fax: +86 755 8828 5299

9.2 Bandwidth Measurement

Test Method

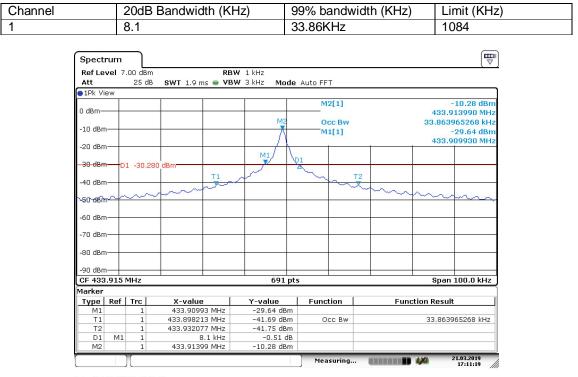

- 1. The RF output of EUT was connected to the test receiver by RF cable. The path loss was compensated to the results for each measurement.
- 2. Set to the maximum power setting and enable the EUT transmit continuously.
- Use the following test receiver settings: Span = approximately 5 times the 20dB bandwidth, centered on a hopping channel RBW > the 20dB bandwidth of the emission being measured, VBW≥RBW, Sweep = auto, Detector function = peak, Trace = max hold
- 4. Allow the trace to stabilize. Use the marker-to-peak function to set the marker to the peak of the emission. Measure the frequency difference of two frequencies that were attenuated 20 dB from the reference level. Record the frequency difference as the emission bandwidth. Record the results.
- 5. Repeat above procedures until all frequencies measured were complete.

Limit

The bandwidth of the emission shall be no wider than 0.25% of the center frequency for devices operating above 70MHz and below 900MHz. For devices operating above 900MHz, the emission shall be no wider than 0.5% of the center frequency. Bandwidth is determined at the points 20dB down from the modulated carrier.

The limit for the EUT = 0.25% * 433.91 MHz = 1084 kHz

Test Result

Date: 21.MAR.2019 17:11:19

9.3 Deactivation Time

Test Method

- 1. The RF output of EUT was connected to the test receiver by RF cable. The path loss was compensated to the results for each measurement.
- 2. Set to the maximum power setting and enable the EUT in transmitting mode.
- 3. Set center frequency of spectrum analyzer=operating frequency.
- 4. Set the spectrum analyzer as RBW=120 KHz, VBW=1MHz, Span=0Hz.
- 5. Repeat above procedures until all frequency measured was complete.

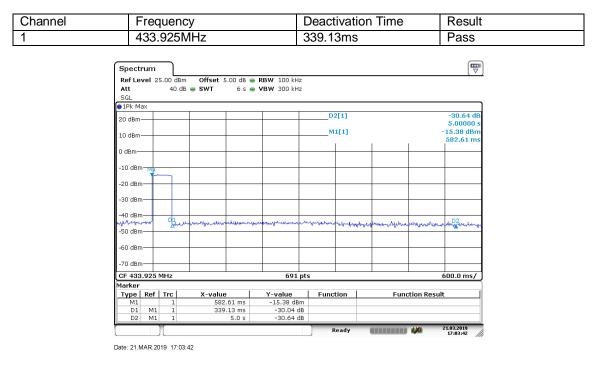

Limit

According to FCC Part 15.231 (a), the transmitter shall be complied the following requirements: (\checkmark) (1) A manually operated transmitter shall employ a switch that will automatically deactivate the transmitter within not more than 5 seconds of being released.

(2) A transmitter activated automatically shall cease transmission within 5 seconds after activation.

(3) Periodic transmissions at regular predetermined intervals are not permitted. However, polling or supervision transmissions, including data, to determine system integrity of transmitters used in security or safety applications are allowed if the total duration of transmissions does not exceed more than two seconds per hour for each transmitter. There is no limit on the number of individual transmissions, provided the total transmission time does not exceed two seconds per hour.

Test Result

11 System Measurement Uncertainty

For a 95% confidence level, the measurement expanded uncertainties for defined systems, in accordance with the recommendations of ISO 17025 were:

System Measurement Uncertainty				
Test Items	Extended Uncertainty			
Uncertainty for Radiated Spurious Emission 25MHz-3000MHz	Horizontal: 4.81dB; Vertical: 4.89dB;			
Uncertainty for Radiated Spurious Emission 3000MHz-18000MHz	Horizontal: 4.69dB; Vertical: 4.68dB;			
Uncertainty for Radiated Spurious Emission 18000MHz-40000MHz	Horizontal: 4.89dB; Vertical: 4.87dB;			
RF Conducted test	RF Power Conducted: 1.16dB Frequency test involved: 0.6×10-7 or 1%
