TÜV SÜD Certification and Testing (China) Co., Ltd. Shanghai Branch is a subcontractor to TÜV SÜD Product Service GmbH according to the principles outlined in ISO 17025.

TÜV SÜD Certification and Testing (China) Co., Ltd. Shanghai Branch reports apply only to the specific samples tested under stated test conditions. Construction of the actual test samples has been documented. It is the manufacturer's responsibility to assure that additional production units of this model are manufactured with identical electrical and mechanical components. The manufacturer/importer is responsible to the Competent Authorities in Europe for any modifications made to the production units which result in non-compliance to the relevant regulations. TÜV SÜD Certification and Testing (China) Co., Ltd. Shanghai Branch shall have no liability for any deductions, inferences or generalizations drawn by the client or others from TÜV SÜD Certification and Testing (China) Co., Ltd. Shanghai Branch issued tenorits.

This report is the confidential property of the client. As a mutual protection to our clients, the public and ourselves, extracts from the test report shall not be reproduced except in full without our written approval.

# 2 Details about the Test Laboratory

### **Details about the Test Laboratory**

Test Site 1

Company name: TÜV SÜD Certification and Testing (China) Co., Ltd. Shanghai Branch

No.16 Lane, 1951 Du Hui Road,

Shanghai 201108,

P.R. China

Test Firm FCC

Registration Number:

820234

Designation

Number:

CN1183

IC Company

Number:

25988

CAB identifier: CN0101

Telephone: +86 21 6141 0123 Fax: +86 21 6140 8600

# 3 Description of the Equipment Under Test

Product: TSS/Paradigm Plus Remote Control

Model no./HVIN: MT02-0101-072002-A, MT02-0101-072003-A

FCC ID: 2AGGZMT0201012A

IC: 21769-MT0201012A

Rating: 3VDC

**RF Transmission** 

Frequency:

433.925MHz

Modulation: FSK

Antenna Type: PCB antenna

Antenna Gain: -3.5dBi

Description of the EUT: The Equipment Under Test (EUT) is a transmitter operated at

433.925MHz.

Test sample no.: SHA-631950-1

# 4 Summary of Test Standards

| Test Standards                    |  |  |  |  |
|-----------------------------------|--|--|--|--|
| FCC Part 15 Subpart C             | PART 15 - RADIO FREQUENCY DEVICES Subpart C - Intentional Radiators                  |  |  |  |
| RSS-Gen Issue 5<br>Amendment 2    | General Requirements for the Certification of Radio Apparatus                        |  |  |  |
| February 2021                     |  |  |  |  |
| RSS-210 Issue 10<br>December 2019 | RSS-210 — Licence-exempt Radio Apparatus (All Frequency Bands): Category I Equipment |  |  |  |

All the test methods were according to ANSI C63.10-2013.

# 5 Summary of Test Results

|  | Technical Requiremen                              | ts    |                |                   |
|--|---|-------|----------------|-------------------|

| §15.207, RSS-GEN<br>A8.8                                   | Conducted emission AC power port                  | N/A   | N/A            | Not<br>Applicable |
| §15.205, §15.209,<br>15.35 (c)§15.231(b),<br>RSS-210 A.1.2 | Radiated Emission,<br>30MHz to 4.5GHz             | 10    | 3m<br>chamber  | Pass              |
| §15.231(c),<br>RSS-210 A.1.3                               | Bandwidth Measurement & 99%<br>Occupied Bandwidth | 14    | Shield<br>room | Pass              |
| §15.231(a)(1), RSS-210<br>A.1.3                            | Deactivation Time                                 | 16    | Shield<br>room | Pass              |
| §15.203, RSS-Gen 6.  | Antenna requirement                               |       | See Note 2     | Pass              |

Note 1: N/A=Not Applicable. Conducted emission is not apply for battery operated device.

Note 2: The EUT uses an PCB Antenna, which gain is -3.5dBi. In accordance to §15.203, It is considered sufficiently to comply with the provisions of this section.

### 6 General Remarks

#### Remarks

This submittal(s) (test report) is intended for FCC ID: 2AGGZMT0201012A, IC: 21769-MT0201012A complies with Section 15.205, 15.209, 15.231 of the FCC Part 15, Subpart C Rules, RSS-Gen Issue 5 and RSS-210 Issue 10.

According to the client's declaration, all models are identical and share the same technology, schematics, PCB trace layout and same safety critical components and mechanical constructions except model name and color.

So model MT02-0101-072002-A was chosen to perform all the tests.

#### **SUMMARY:**

# 8 Test Setups

## 8.1 Radiated test setups

### Below 1GHz

### Above 1GHz

## 9 Test Methodology

### 9.1 Radiated Emission

#### **Test Method**

- 1. 1 The EUT was place on a turn table which is 1.5m above ground plane for above 1GHz and 0.8m above ground for below 1GHz at 3 meters chamber room for test. The table was rotated 360 degrees to determine the position of the highest radiation.
- 2. Set to the maximum power setting and enable the EUT transmit continuously
- 3. The EUT was set 3 meters away from the interference receiving antenna, which was mounted on the top of a variable height antenna tower.
- 4. The height of antenna is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- 5. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
- 6. Use the following spectrum analyzer settings According to C63.10:
  - (1) Span shall wide enough to fully capture the emission being measured;
  - (2) Set RBW=100 kHz for f < 1 GHz; VBW RBW; Sweep = auto; Detector function = peak; Trace = max hold;
  - (3) Set RBW = 1 MHz, VBW= 3MHz for f ≥1 GHz for peak measurement. For average measurement:
    - VBW = 10 Hz, when duty cycle is no less than 98 percent.
    - VBW ≥ 1/T, when duty cycle is less than 98 percent where T is the minimum transmission duration over which the transmitter is on and is transmitting at its maximum
    - power control level for the tested mode of operation.
- 7. Repeat above procedures until all frequencies measured were complete.

#### Limit

According to §15.231 (b) and RSS-210 A.1.2, the field strength of emissions from intentional radiators operated under this section shall not exceed the following:

| Fundamental frequency<br>(MHz) | Field Strength of<br>Fundamental (Microvolts /meter) | Field Strength of spurious emissions ((Microvolts /meter) |
|--------------------------------|--|---|
| 40.66-40.70                    | 2,250  | 225   |
| 70-130                         | 1,250  | 125   |
| 130-174                        | 1,250 to 3,370 *                                     | 125 to 375 *  |
| 174-260                        | 3,750  | 375   |
| 260-470 √                      | 3,750 to 12, 500*                                    | 375 to 1,250*   |
| Above 470                      | 12,500   | 1,250   |

### Limits for 15.209 and RSS-210 A.1.2 Radiated emission limits; general requirements

| Frequency (MHz) | Field strength (microvolts/meter) | Measurement distance (meters) |
|-----------------|-----------------------------------|-------------------------------|
| 0.009-0.490     | 2400/F(kHz)                       | 300                           |
| 0.490-1.705     | 24000/F(kHz)                      | 30                            |
| 1.705-30.0      | 30                                | 30                            |
| 30-88           | 100                               | 3                             |
| 88-216          | 150                               | 3                             |
| 216-960         | 200                               | 3                             |
| Above 960       | 500                               | 3                             |

| Frequency             | Limit at 3m (dBuV/m)       |
|-----------------------|----------------------------|
| 0.009 MHz - 0.490 MHz | 128.5 to 93.8 <sup>1</sup> |
| 0.490 MHz – 1.705 MHz | 73.8 to 63 <sup>1</sup>    |
| 1.705 MHz – 30 MHz    | 69.5 <sup>1</sup>          |
| 30 MHz – 88 MHz       | 40.0 <sup>1</sup>          |
| 88 MHz – 216 MHz      | <b>4</b> 3.5 <sup>1</sup>  |
| 216 MHz – 960 MHz     | 46.0 <sup>1</sup>          |
| Above 960 MHz         | 54.0 <sup>1</sup>          |
| Above 1000 MHz        | <b>54.0</b> <sup>2</sup>   |
| Above 1000 MHz        | 74.0 <sup>3</sup>          |

<sup>&</sup>lt;sup>1</sup>Limit is with detector with bandwidths as defined in CISPR-16-1-1 except for the frequency bands 9-90 kHz, 110-490 kHz and above 1000 MHz where an Average detector is used.

<sup>&</sup>lt;sup>2</sup>Limit is with 1 MHz measurement bandwidth and using an Average detector <sup>3</sup>Limit is with 1 MHz measurement bandwidth and using a Peak detector

### Spurious radiated emissions for transmitter

According to C63.10, if the peak (or quasi-peak) measured value complies with the average limit, it is unnecessary to perform an average measurement, so AV emission value did not show in below table if the peak value complies with average limit.

| Antenna<br>polarization | Frequency<br>(MHz) | Duty Cycle<br>Factor(dB) | Corrected<br>Reading<br>(dBuV/m) | Emission<br>Type | Limit<br>(dBuV/<br>m) | Margin | Detector |
|-------------------------|--------------------|--------------------------|----------------------------------|------------------|-----------------------|--------|----------|

#### Remark:

- 1: AV Emission Level= PK Emission Level+20log (duty cycle)
- 2: Other than listed in the table are attenuated more than 20dB below the permissible limit of the field strength, therefore no data appear in the
- report.
  3: "\*" means the emission(s) appear within the restrict bands shall follow the requirement of section 15.205.
- 4: Corrected Amplitude = Read level + Corrector factor Above 1GHz: Corrector factor = Antenna Factor + Cable Loss- Amplifier Gain Below 1GHz: Corrector factor = Antenna Factor + Cable Loss
- 5. Correct Factor = Antenna Factor + Cable Loss (+ Amplifier, for higher than 1GHz)
- Corrected Reading = Original Receiver Reading + Correct Factor
   Only the worst data listed in this report

Duty Cycle = 16.522(ms)/63.043 (ms) =26.208% Duty Cycle Factor =20log (Duty Cycle) =-11.63

## 9.2 Bandwidth Measurement & 99% Occupied Bandwidth

#### **Test Method**

- 1. The RF output of EUT was connected to the test receiver by RF cable. The path loss was compensated to the results for each measurement.
- 2. Set to the maximum power setting and enable the EUT transmit continuously.
- 3. Use the following test receiver settings:

  Span = approximately 5 times the 20dB bandwidth, centered on a hopping channel

  RBW =1% to 5% of the 20dB bandwidth of the emission being measured, VBW≥RBW,

  Sweep = auto, Detector function = peak, Trace = max hold
- 4. Allow the trace to stabilize. Use the marker-to-peak function to set the marker to the peak of the emission. Measure the frequency difference of two frequencies that were attenuated 20 dB from the reference level. Record the frequency difference as the emission bandwidth. Record the results.
- 5. Repeat above procedures until all frequencies measured were complete.

#### Limit

The bandwidth of the emission shall be no wider than 0.25% of the center frequency for devices operating above 70MHz and below 900MHz. For devices operating above 900MHz, the emission shall be no wider than 0.5% of the center frequency. Bandwidth is determined at the points 20dB down from the modulated carrier.

The limit for the EUT = 0.25% \* 433.92 MHz = 1085 kHz

### **Test Result**

| Channel | 20dB Bandwidth (KHz) | Limit (KHz) |
|---------|----------------------|-------------|
| 1       | 92.6                 | 1085        |
|         |                      |             |
| Channel | 99% bandwidth (KHz)  | Limit (KHz) |
| 1       | 162.08               | N/A         |

### 9.3 Deactivation Time

#### **Test Method**

- 1. The RF output of EUT was connected to the test receiver by RF cable. The path loss was compensated to the results for each measurement.
- 2. Set to the maximum power setting and enable the EUT in transmitting mode.
- 3. Set center frequency of spectrum analyzer=operating frequency.
- 4. Set the spectrum analyzer as RBW=120 KHz, VBW=1MHz, Span=0Hz.
- 5. Repeat above procedures until all frequency measured was complete.

#### Limit

According to FCC Part 15.231 (a), the transmitter shall be complied the following requirements:

- $(\sqrt{\ })$  (1) A manually operated transmitter shall employ a switch that will automatically deactivate the transmitter within not more than 5 seconds of being released.
- (2) A transmitter activated automatically shall cease transmission within 5 seconds after activation.
- (3) Periodic transmissions at regular predetermined intervals are not permitted. However, polling or supervision transmissions, including data, to determine system integrity of transmitters used in security or safety applications are allowed if the total duration of transmissions does not exceed more than two seconds per hour for each transmitter. There is no limit on the number of individual transmissions, provided the total transmission time does not exceed two seconds per hour.

#### **Test Result**

| Channel | Frequency | Deactivation Time | Result |
|---------|-----------|-------------------|--------|
| 1       | 433 92MHz | 694 56ms          | Pass   |

# 11 System Measurement Uncertainty

For a 95% confidence level, the measurement expanded uncertainties for defined systems, in accordance with the recommendations of ISO 17025 were:

| Items                | Extended Uncertainty                |
|----------------------|-------------------------------------|
| Radiated Disturbance | 30MHz to 1GHz, ±5.03dB (Horizontal) |
|                      | ±5.11dB (Vertical)                  |
|                      | 1GHz to 18GHz, ±5.15dB (Horizontal) |
|                      | ±5.12dB (Vertical)                  |
|                      | 18GHz to 25GHz, ±4.76dB             |

Measurement Uncertainty Decision Rule:

Determination of conformity with the specification limits is based on the decision rule according to IEC Guide 115: 2007, clause 4.4.3 and 4.5.1.
