

PARTIAL Test Report 18-1-0097202T01a

Number of pages: 17 Date of Report: 2021-May-31

Testing company: CETECOM GmbH Applicant: ACTIA Nordic AB

Im Teelbruch 116 45219 Essen Germany Tel. + 49 (0) 20 54 / 95 19-0 Fax: + 49 (0) 20 54 / 95 19-150

Product: Telematics Device

Model: 103360002

FCC ID: 2AGKK103360002 IC: 20839-103360002

Testing has been Title 47 CFR, Chapter I
carried out in FCC Regulations, Subchapter B
accordance with: Part 22, Part 24, Part 27

RSS-132, Issue 3; RSS-133, Issue 6; RSS-130, Issue 2; RSS-139, Issue 3

Deviations, modifications or clarifications (if any) to above mentioned documents are written

in each section under "Test method and limit".

Tested Technology: GSM + WLAN2.4GHZ, WCDMA + WLAN2.4GHZ

LTE + WLAN2.4GHZ, GSM + WLAN5GHZ, GSM + BT

Test Results:

☑ The EUT complies with the requirements in respect of selected parameters subject to

the test.

The test results relate only to devices specified in this document

Signatures:

Dipl.-Ing. Ninovic Perez
Test Lab Manager
Authorization of test report

B.Sc. Mohamed Ahmed Test manager Responsible of test report

1 General information

1.1 Disclaimer and Notes

The test results of this test report relate exclusively to the test item specified in this test report as specified in chapter 2.7. CETECOM does not assume responsibility for any conclusions and generalizations drawn from the test results with regard to other specimens or samples of the type of the equipment represented by the test item.

The test report may only be reproduced or published in full. Reproduction or publication of extracts from the report requires the prior written approval of CETECOM.

The testing service provided by CETECOM has been rendered under the current "General Terms and Conditions for CETECOM". CETECOM will not be liable for any loss or damage resulting from false, inaccurate, inappropriate or incomplete product information provided by the customer.

Under no circumstances does the CETECOM test report include any endorsement or warranty regarding the functionality, quality or performance of any other product or service provided.

Under no circumstances does the CETECOM test report include or imply any product or service warranties from CETECOM, including, without limitation, any implied warranties of merchantability, fitness for purpose, or non-infringement, all of which are expressly disclaimed by CETECOM.

All rights and remedies regarding vendor's products and services for which CETECOM has prepared this test report shall be provided by the party offering such products or services and not by CETECOM.

In no case this test report can be considered as a Letter of Approval.

This test report is electronically signed and valid without handwritten signature. For verification of the electronic signatures, the public keys can be requested at the testing laboratory.

The test report must always be reproduced in full; reproduction of an excerpt only is subject to written approval of the testing laboratory. The documentation of the testing performed on the tested devices is archived for 10 years at CETECOM.

Also we refer on special conditions which the applicant should fulfill according §2.927 to §2.948, special focus regarding modification of the equipment and availability of sample equipment for market surveillance tests.

1.2 Disclaimer and Notes

I declare that all measurements were performed by me or under my supervision and that all measurements have been performed and are correct to my best knowledge and belief to Industry Canada standards. All of the above requirements are met in accordance with enumerated standards.

This test report check for emissions generated by the device if operated on the intended typical way. The usual testcase is simulated by switching-on all wireless modular transmitters (allready approved) and checking for different GSM, WCDMA and LTE band combinations of the cellular part together with the transmitter WLAN and Bluetooth® LE Part.

For the emissions generated by the host and the composite system, the less stringent limits requirements, as presented below, are valid. (Cellular limits Part 22/24/27 less stringent than Part 15.247 limits valid for the un-licensed transmitter part)

CETECOM_TR20-1-0159101T02a 3/17

4 Measurements

4.1 Radiated spurious emissions

4.1.1 Description of the general test setup and methodology, see below example:

Evaluating the emissions have to be done first by an exploratory emissions measurement and a final measurement for most critical frequencies. The tests are performed in a CISPR 16-1-4:2010 compliant fully anechoic room (FAR) recognized by the regulatory commission. The measurement distance was set to 3 meter for frequencies up to 18 GHz and 2 meter above 18 GHz. A logarithmic periodic antenna is used for the frequency range 30 MHz to 1 GHz. Horn antennas are used for frequency range 1 GHz to 40 GHz. The EUT is aligned within 3 dB beam width of the measurement antenna with three orthogonal axis measurements on the EUT.

Schematic:

Testing method:

The measurement is made according to relevant reference clauses: (See Tables Summary of Test Results and Summary of Test Methods on page 5)

Exploratory, preliminary measurements

The EUT and its associated accessories are placed on a non-conductive position manipulator (tipping device) of 1.50 m height which is placed on the turntable. By rotating the turntable (range 0° to 360°, step 45°) and the EUT itself on 3-orthogonal axis (the emission spectrum and it's characteristics was recorded with an EMI-receiver, broadband antenna and software.

The measurements are performed in horizontal and vertical polarization of the measurement antennas. The results are documented in a diagram. Critical frequencies (low margin to limit) are saved within a table for further investigations. If various operating modes are supported, further investigations are made to find the worst-case of them. Also the interconnection cables and equipment position were varied in order to maximize the emissions.

Final measurement on critical frequencies

Based on the exploratory measurements, the most critical frequencies are re-measured by main-taining the EUT's worst-case operation mode, cable position, etc.

First a frequency zoom around the critical frequency is done to locate the frequency more precisely. After this step, for all identified critical frequencies, the maximum peak was determined.

CETECOM_TR20-1-0159101T02a 12 / 17

Following parameters were varied: the turntable angle continuously in the range 0 to 360 degree, the EUT itself over 3-orthogonal axis and the height for EUT with large dimensions.

On the determined worst-case position, a final measurement with necessary bandwidth and detector according standard has been carried out.

The readings on the spectrum analyzer are corrected with conversion value between field strength and E(I)RP, so the readings shown are equivalent to ERP/EIRP values. Critical measurements near the limit are re-measured with a substitution method accord. ANSI/TIA/EIA 603 C/D

Formula:

 $P_{EIRP} = P_{MEAS} + C_L + FSL - G_{PreA} - G_{ANT}$ (1)

 P_{MEAS} = measured power at instrument

M = Margin

 $L_T = Limit$

FSL = Free Space loss = Function(frequency, measurement distance)

 $M = L_T - P_{EIRP}$ $C_L = cable loss$

 G_{PreA} = Gain of pre-amplifier (if used)

G_{ANT} = Gain of antenna in [dBi]

All units are dB-units, positive margin means value is below limit.

4.1.2 Measurement Location

4.1.3 Limit

Operation band	Frequency Range [MHz]	Limit [dBm]	Detector [MaxHold]	RBW / VBW [MHz]
GSM 850	30 - 9000	-13	Peak	0.1 / 3
GSM 850	9000 - 40000	-13	Peak	1/3
GSM 1900	30 - 26000	-13	Peak	1/3
WCDMA IV	30 - 26000	-13	Peak	1/3
LTE12	30 - 9000	-13	RMS	0.1/3
LTE12	9000 - 26000	-13	RMS	1/3

CETECOM_TR20-1-0159101T02a 13 / 17

4.1.4 Result

Diagram	Frequency	Operation	Set up No.	Max Peak to Limit line,	Frequency	Result

6 Measurement Uncertainty valid for conducted/radiated measurements

The reported uncertainties are calculated based on the standard uncertainty multiplied with the appropriate coverage factor \mathbf{k} , such that a confidence level of approximately 95% is achieved. For uncertainty determination, each component used in the concrete measurement set-up was taken in account and it contribution to the overall uncertainty according its statistical distribution calculated.

RF-Measurement	Reference	Frequency range	Calculated uncertainty based on a confidence level of 95%			Remarks			
Conducted emissions		9 kHz - 150 kHz	4.0 dB						
(U _{CISPR})	-	150 kHz - 30 MHz	3.6 dB					-	
Power Output radiated	-	30 MHz - 4 GHz	3.17 dB					Substitution method	
		Set-up No.	Cel- C1	Cel- C2	BT1	W1	W2		
Power Output conducted	-	9 kHz - 12.75 GHz	N/A	0.60	0.7	0.25	N/A		
		12.75 GHz - 26.5 GHz	N/A	0.82		N/A	N/A] -
Conducted emissions	-	9 kHz - 2.8 GHz	0.70	N/A	0.70	N/A	0.69		N/A - not applicable
on RF-port		2.8 GHz - 12.75 GHz	1.48	N/A	1.51	N/A	1.43		
		12.75 GHz – 18 GHz	1.81	N/A	1.83	N/A	1.77		
		18 GHz - 26.5 GHz	1.83	N/A	1.85	N/A	1.79		
0	0111 1011		0.1272 ppm (Delta Marker)					Frequency	
Occupied bandwidth	-	9 kHz - 4 GHz							error
	<u> </u>		1.0 dB						Power
	-		0.1272 ppm (Delta Marker)						Frequency
Emission bandwidth		9 kHz - 4 GHz							error
	-		See above: 0.70 dB					Power	
Frequency stability	-	9 kHz - 20 GHz	0.0636 ppm					-	
		150 kHz - 30 MHz	5.01d	5.01dB					Magnetic
Radiated emissions	-						field strength		
Enclosure		30 MHz - 1 GHz	5.83 dB					Electrical	
		1 GHz - 18 GHz	4.91 dB					Field	
		18-26.5 GHz	5.06 d	IB					strength
