

MPE TEST REPORT

Applicant	Sengled Co.,Ltd.
FCC ID	2AGN8-ZM005
Product	Sengled Zigbee Module
Model	ZM005
Report No.	R2106A0536-M1
Issue Date	August 19, 2021

TA Technology (Shanghai) Co., Ltd. tested the above equipment in accordance with the requirements in **FCC 47 CFR Part 1 1.1310.** The test results show that the equipment tested is capable of demonstrating compliance with the requirements as documented in this report.

1 Test Laboratory

1.1 Notes of the Test Report

This report shall not be reproduced in full or partial, without the written approval of **TA technology** (**shanghai**) **co., Ltd.**The results documented in this report apply only to the tested sample, under the conditions and modes of operation as described herein .Measurement Uncertainties were not taken into account and are published for informational purposes only. This report is written to support regulatory compliance of the applicable standards stated above.

1.2. Test facility

FCC (Designation number: CN1179, Test Firm Registration Number: 446626)

TA Technology (Shanghai) Co., Ltd. has been listed on the US Federal Communications Commission list of test facilities recognized to perform measurements.

1.3 Testing Location

Company:	TA Technology (Shanghai) Co., Ltd.
Address:	No.145, Jintang Rd, Tangzhen Industry Park, Pudong Shanghai, China
City:	Shanghai
Post code:	201201
Country:	P. R. China
Contact:	Fan Guangchang
Contact: Telephone:	Fan Guangchang +86-021-50791141/2/3
Telephone:	+86-021-50791141/2/3

1.4 Laboratory Environment

Temperature	Min. = 18°C, Max. = 25 °C		
Relative humidity	Min. = 30%, Max. = 70%		
Ground system resistance	< 0.5 Ω		
Ambient noise is checked and found very low and in compliance with requirement of standards.			
Reflection of surrounding objects is minimized and in compliance with requirement of standards.			

Description of Equipment under Test 2

Client Information

Applicant	Sengled Co.,Ltd.	
Applicant address	Room 103/02-B,Floor 1, Building 1, No. 498, Guoshoujing Road, Pilot Free Trade Zone Shanghai China	
Manufacturer	Sengled Co.,Ltd.	
Manufacturer address	Room 103/02-B,Floor 1, Building 1, No. 498, Guoshoujing Road, Pilot Free Trade Zone Shanghai China	

General Technologies

Model	ZM005	
Lab internal SN	R2106A0536/S01	
Hardware Version:	V2	
Software Version	oftware Version V05	
Date of Testing: July 6, 2021~ August 11, 2021		
Note: 1. The EUT is sent from the applicant to TA and the information of the EUT is declared by		

the applicant.

2. All indications of Pass/Fail in this report are opinions expressed by TA Technology (Shanghai) Co., Ltd. based on interpretations and/or observations of test results. Measurement Uncertainties were not taken into account and are published for informational purposes only.

3 Maximum conducted output power (measured) and antenna Gain

The numeric gain (G) of the antenna with a gain specified in dB is determined by Numeric gain (G)= $10^{(antenna gain/10)}$

Band		nducted Output r (dBm)	Antenna Gain	Numeric gain
	(dBm)	(mW)	(dBi)	
Zigbee	10.000	10.000	0	1.000

4 Test Result

According to section 1.1310 of FCC 47 CFR Part 1, limits for maximum permissible exposure

(MPE) are as following

Frequency Range	Electric Field	Magnetic Field	Power Density	Averaging Time	
(MHz)	Strength	Strength Strength			
65.000 - 194	(∨/m)	(A/m)	(mW/cm2)	(minutes)	
	(A) Limits for Occu	upational/Controlle	d Exposures	i Sector a Sector IV	
0.3-3.0	614	1.63	*(100)	6	
3-30	1842/f	4.89/f	*(900/f2)	6	
30-300	61.4	0.163	1.0	6	
300-1500			f/300	6	
1500-100,000			5	6	
(B)	Limits for General	Population/Uncont	rolled Exposure		
0.3-1.34	614	1.63	*(100)	30	
1.34-30	824/f	2.19/f	*(180/f2)	30	
30-300	27.5	0.073	0.2	30	
300-1500			f/1500	30	
1500-100,000			1.0	30	

TABLE 1 - LIMITS FOR MAXIMUN PERMISSIBLE EXPOSUR	RE (MPE)
--	----------

f = frequency in MHz

* = Plane-wave equivalent power density

Note1. Occupational/controlled limits apply in situations in which persons are exposed as a consequence of their employment provided those persons are fully aware of the potential for exposure and can exercise control over their exposure. Limits for occupational/controlled exposure also apply in situations when an individual is transient through a location where occupational / controlled limits apply provided he or she is made aware of the potential for exposure.

Note2: General population/uncontrolled exposures apply in situations in which the general public may be exposed, or in which persons that are exposed as a consequence of their employment may not be fully aware of the potential for exposure or can not exercise control over their exposure.

The maximum permissible exposure for 300~1500 MHz is f/1500, for 1500~100,000MHz is 1.0.So

Band	The maximum permissible exposure (mW/cm ²)		
Zigbee	1.000		

MPE Test Report

RF Exposure Calculations:

The following information provides the minimum separation distance for the highest gain antenna provided. This calculation is based on the conducted power, considering maximum power and antenna gain. The formula shown in KDB 447498 D01 is used in the calculation.

Equation from KDB 447498 D01 General RF Exposure Guidance v06 (10/23/2015) is:

$S = PG / 4\pi R^2$

Where: S = power density (in appropriate units, e.g. mW/cm^{2})

P = Time-average maximum tune up procedure (in appropriate units, e.g., mW)

G = the numeric gain of the antenna

R = distance to the center of radiation of the antenna (20 cm = limit for MPE)

Band	Antenna Gain (dBi)	Maximum Power (dBm)	Maximum EIRP (dBm)	PG (mW)	Test Result (mW/cm ²)	Limit Value (mW/cm ²)
Zigbee	0	10.000	10.000	10.000	0.002	1.000
Note: R = 20cm						
π = 3.1416						
1. This MPE analysis is applicable to any collocated transmitters with EIRP for Wi-Fi /BT is less than						
or equal to 26dBm.						

Note: For transmitters, minimum separation distance is 20cm, even if calculations indicate MPE distance is less.

******END OF REPORT ******

ANNEX A: The EUT Appearance

The EUT Appearance are submitted separately.
